CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Standard Bidding Document (SBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
 - a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.
 - b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.
- 4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

The raised dam wall will be approximately 370 m in length and 49 m in maximum height. At full supply level the reservoir will cover a surface area of approximately 2 022 ha and capacity of 344.3 million cubic metre. The works include addition of concrete on the downstream side, extending the apron, construction of a free standing intake tower, river outlet control house, a power generating house, short tunnel and coffer dam works on the upstream side, as well as various other pipe outlet structures on the downstream side. This work must be done without interfering with the day to day operation of the dam.

PS 2. LOCATION AND ACCESS TO SITE

The dam site is situated on the Olifants river, in the Western Cape, approximately 2 km South- West of Clanwilliam town in the Western Cape Province. The site is immediately next to the N7 and accessed through a controlled gate. The gravel site roads will be regularly maintained but could get challenging under abnormal rainfall conditions.

PS 3. SCOPE OF WORK

Formwork proposals adhering to the requirements for the different sections of work, as well as a financial proposal in terms of purchasing or hiring of the formwork for the Clanwilliam dam project are required for the different sections with the requirements as listed below:

PS 3.1 INTAKE TOWER

The intake tower consists mainly of single side outside formwork as well as shaft and chamber formwork.

PS 3.1.1 OUTSIDE PERIMETER WALLS (Refer Drawing CWD 4059 & 4063)

One sided climbing formwork to accommodate a 2.1 m concrete lift is required. The formwork proposed must consist of sections and adhere to the following standards:

- The section must consist of standard of the shelf formwork items and the amount of items must be kept to the minimum e.g. big panels instead of made up of small size panels.
- The standard width of the section will be 2.7 m unless otherwise indicated.
- The formwork must be easy to erect, to join and adjustable in height as well as verticality.
- The formwork must be able to tilt backwards in order to install climbing cone/bracket
- The formwork must be supported on two support brackets with a hanging platform with railings and flooring with stiffeners as required for retrieving climbing cone/bracket and making concrete repairs as required
- The formwork section must be able to be lifted as a whole by crane.
- The formwork section must have a top access platform with railings and flooring.

- The formwork must be able to join effectively and efficiently on all corners.

The different sections required are as follow:

Type A (25 off)

This is a standard 2.7 m wide section adhering to the required standards.

Type B (3 off)

This is a special rounded section as indicated in blue. It will have rectangular lengths of 2.2 m and 1.525 m respectively. This section must be able to easily join Type A section.

Type Ba (3 off)

This is a mirror image of the special rounded section Type B as indicated green.

Type C (4 off)

This is a standard 2.7 m wide section (same as Type A) with the exception that it does not require a hanging platform. Alternatively the support brackets may be substituted with a working platform Type G. This section must be able to easily join Type B1 and Type D section

Type D (4 off)

This is a special 2.3 m wide section. Note should be taken of the box out sections that could influence the support brackets. A straight section with add on box outs is preferred. It does not require a hanging platform. Alternatively the support brackets may be substituted with a working platform Type G. This section must be able to easily join Type C and Type E section on the corner.

Type E (2 off)

This is a special 3.8 m wide section. Note should be taken of the position of the pipe and the box out sections that could influence the support brackets. It does not require a hanging platform. Alternatively the support brackets may be substituted with a working platform Type G. This section must be able to easily join Type D section on the corner.

Type F (1 off)

This is a special 2,25 m wide section adhering to the required standards. This section must be able to easily join Type B and Type B1 section.

Type G (2 off)

This is a 5.2 m long working platform spanning the 3.8 m between the walls for the wet well section. This platform shall be off the "Klick Klack" type and be supported on folding bearing brackets in the position of former support bracket climbing cone/bracket. The working platform shall be lifted by crane to the next folding bearing bracket position after the formwork section with supporting brackets were lifted. Alternatively if the working platform is used as supporting bracket for Type C, D and E sections it must be designed as such.

Recesses (Box outs)

Different size recesses will be required for the full lift height. The recesses (box outs) will be manufactured from steel with a lifting hook on top in order to be pulled up by crane. The recesses box outs will be bolted to the form in such a way that after the bolt is removed there will be no protruding elements preventing the formwork to be lifted upwards. The recesses (box outs) will be of such a nature that it prevent ingress of mortar into the recess (box outs) by filling it with a hard industrial foam or similar.

Type BA (4 off)

The recess is 395 mm deep by 550 mm wide to accommodate the thrash racks. See Drawing CWD 4063

Type BB (4 off)

The recess is 250 mm deep by 1200 mm wide, tapered to accommodate the fine screens. See Drawing CWD 4063

Type BC (4 off)

The recess is 250 mm deep by 1150 mm wide to accommodate the emergency gate. See Drawing CWD 4063

Type BD (1 off)

The recess is 250 mm deep by 4300 mm wide to accommodate the outlet pipe to 250 mm above the centre line of the outlet pipe. This can be divided into smaller sections if more practical. See Drawing CWD 4063 section 15-15

Type BDa (1 off)

The recess is 250 mm deep by 4300 mm wide to accommodate the outlet pipe from 250 mm above the centre line of the outlet pipe. This can be divided into smaller sections if more practical. See Drawing CWD 4063 section 15-15

PS 3.1.2 DRY WELL VALVE CHAMBER (Refer Drawing CWD 4055, 4058 & 4059)

One sided formwork to accommodate a 2.1 m concrete lift is required. The formwork proposed must consist of sections and adhere to the following standards:

- The section must consist of standard of the shelf formwork items and the amount of items must be kept to the minimum e.g. big panels instead of made up of small size panels.
- The formwork must be easy to erect, to join and adjustable in height as well as verticality.

The different sections require are as follow:

Type H (Downstream face of Valve Chamber)

The installed pipe restricts the outside support to the vertical single side formwork. The formwork join the side wall panel Type I and the lift shaft panel Type M. The intended method for formwork is shown in figure 1.

The hatched areas will require special formwork and the solid areas represent infills. The rest of the formwork consists of an internal corner and standard big panel sizes.

The intention is to keep the bottom 2.7m high formwork in place, except for the two special panels on top of the pipe. The next 2.4 / 2.7m panel lift will be placed on top of the bottom 2.7m high formwork after the concrete has been placed to that section.

Figure 1: Proposed downstream wall panel layout

Type I (Upstream face of Valve Chamber)

The installed pipe restricts the outside support to the vertical single side formwork. The formwork join the side wall panel Type I and the stairwell shaft panel Type N. The intended method for formwork is shown in figure 2.

The hatched areas will require special formwork and the solid areas represent infills. The rest of the formwork consists of an internal corner and standard big panel sizes.

The intention is to keep the bottom 2.7m high formwork in place, except for the two special panels on top of the pipe. The next 2.4 / 2.7m panel lift will be placed on top of the bottom 2.7m high formwork after the concrete has been placed to that section.

Figure 2: Proposed upstream wall panel layout

Type J (Side wall face of Valve Chamber)

The installed pipe restricts the outside support to the vertical single side formwork. The formwork join the Downstream face panel Type H and Upstream face panel Type I. The intended method for formwork is shown in figure 3.

The solid areas represent infills. The rest of the formwork consists of an internal corner and standard big panel sizes.

The intention is to keep the bottom 2.7m high formwork in place, except for the two special panels on top of the pipe. The next 2.4 / 2.7m panel lift will be placed on top of the bottom 2.7m high formwork after the concrete has been placed to that section.

Figure 3: Proposed side wall panel layout.

Type K (Roof support and decking for Valve chamber)

The installed pipe restricts the position of the decking supports. It is also a requirement that the roof support be extended to accommodate the formwork for the service well wall.

It is the intention to cast the concrete for a height of 1.1 m above the soffit level. It is important to note that the decking will be extended between the lift shaft and the stairwell shaft as shown in figure 4.

Figure 4 : Proposed Roof and wall panel layout

Type L (Single side formwork for service well wall)

This section will rest on the roof support system and the panel layout is as per figure 4.

Two special non-standard panels of 1.75 m wide by 1.2 m high and 1.75 m wide by 2.4 m high respectively will be required as indicated by hatched area in figure 4.

The required outside side support must also be provided for the first 1.1m pour supported by the roof support unit. For the next lift the formwork must be supported on climbing brackets and supports.

One set of formwork for the first section of 1.2m will be required

Two sets of formwork for the second section of 2.4 m will be required.

PS 3.1.3 LIFT SHAFT (Refer Drawing CWD 4053, 4059 & 4061)

Type M (Shaft form work on single side climbing platform and hanging platform)

Although all sides of the lift shaft will not receive concrete all the time it is a requirement that rectangular shuttering with dimensions of 1.65m by 2.65 m by 2.4m high (Pour 2.1 m) will be required. The system must be of such a nature that it can enable rapid striking of the formwork and lifting of the complete shaft formwork in one piece by crane. The section will be used from RL 86.95 to RL 124.75.

This system will be supported by a single side climbing platform with an access manhole, ladder and hanging platform to the previous lift. The platform and hanging platform must be able to be lifted as a unit by crane to the next position.

PS 3.1.4 STAIR SHAFT (Refer Drawings CWD 4056, 4058, 4061 & 4404)

Type N (Shaft formwork on climbing platform and hanging platform)

Although all sides of the lift shaft will not receive concrete all the time it is a requirement that rectangular shuttering with dimensions of 2.46 m by 4.1m by 4.2m high (Pour max 2.1 m) will be required. The height of the formwork is determined by the position of the stairs and the pour heights to optimise the amount of lifts. The system must be of such a nature that it can enable rapid striking of the formwork and lifting of the complete shaft formwork in one piece by crane. The section will be used from RL 86.95 to RL 124.75.

It is envisaged that the recesses will be formed with special formwork that bolt onto the shaft formwork at the required height.

The system will be supported on a climbing platform. This platform shall be off the "Klick Klack" type and be supported on folding bearing brackets. The position of the platform must take the changing profile of the wall into consideration. The working platform shall be lifted with the "parked" shaft form work by crane to the next folding bearing bracket position.

A trailing platform will be required to retrieve the special recess formwork for reuse. It can be either a hanging platform or separate work platform.

Recesses (Box outs)

Different size recesses will be required for the different lifts. The recesses (box outs) will be manufactured from steel. The vertical recesses will be provided with a lifting hook on top in order to be pulled up by crane. The horizontal recesses will be of lengths that it could be manhandled and provided with a screw in eye bolt (in same bolt on position) to enable the attachment of a chain block to assist with removal if required. The recess box outs will be bolted to the formwork in such a way that after the bolt is removed there will be no protruding elements preventing the formwork to be lifted upwards. The recesses (box outs) will be of such a nature that it prevent ingress of mortar into the recess (box outs) by filling it with a hard industrial foam or similar.

Type BE (2 off)

The recess is 300 mm deep by 600 mm wide and 2.4m long to accommodate the electrical cabling. See Drawing CWD 4058.

Type BF (4 off)

The recess for the horizontal landing of the staircases is 525 mm deep 1400 mm high and 2460 mm long. For detail see Drawing CWD 4404. Special attention must be given to stripping detail.

PS 3.2 RCC UPSTREAM FORMWORK (Refer Drawing CWD 0052,2233,2255)

One sided climbing formwork to accommodate two pours of 1.2 m in height is required. The formwork proposed must consist of sections and adhere to the following standards:

- The section must consist of standard of the shelf formwork items and the amount of items must be kept to the minimum e.g. big panels instead of made up of small size panels.
- The standard width of the section will preferably be a minimum of 2.7 m wide.
- The formwork must be easy to erect, to join and adjustable in height as well as verticality.
- The formwork must be able to tilt backwards in order to install climbing cone/bracket
- The formwork must be supported on two support brackets with a hanging platform with railings and flooring with stiffeners as required for retrieving climbing cone/bracket and making concrete repairs as required.

- The formwork section must have a top access platform with railings and flooring.
- The formwork must be able to join effectively and efficiently on all corners.

A typical formwork section is indicated in figure 5.

Figure 5: Typical formwork section

It must be noted that special detail to the suspension points is required as the RCC is a low cementitious concrete with a slow rate of strength development. If the suspension point is of concern a secondary suspension A-frame with jacks can be considered to support the leading A-frame and provide a bridge effect to previous suspension point as indicated in red in figure 5. The suspension platform will follow on secondary suspension A-frame. For details see drawings CWD 0052, CWD 2233 and CWD 2255.

Type O (RCC Upstream Formwork) (142 off)

This is a standard 2.7 m wide unit complying with the above standards

PS 3.3 RCC DOWNSTREAM FORMWORK (Refer Drawing CWD 0052, 2233, 2255)

One sided formwork to accommodate a 1.2m pour height is required. The formwork will rest on the previous lift with adjustments for vertical support and adjustment on the outside and adhere to the following standards:

- The form work will consist of a 2.7 m by 1.2 m height panel.
- The two outside support sections and stiffeners must be fixed to the formwork panel.
- This section will be easily aligned and connected / disconnected from the adjoining sections.
- The formwork section must be able to be lifted as a whole by a crane and lifting hooks must be provided.
- The formwork must be able to join effectively and efficiently on all corners.

There are no specific requirements for the outside support system. Preference will be given to a system that contain as much as possible standard of the shelf items if at all possible. Refer to figure 6. For details see drawings CWD 0052, CWD 2233 and CWD 2255.

Figure 6: Possible downstream formwork layout

Type P (RCC Downstream formwork) (204 off)

PRICE ADJUSTMENTS

A. NON-FIRM PRICES SUBJECT TO ESCALATION

1. IN CASES OF PERIOD CONTRACTS, NON FIRM PRICES WILL BE ADJUSTED (LOADED) WITH THE ASSESSED CONTRACT PRICE ADJUSTMENTS IMPLICIT IN NON FIRM PRICES WHEN CALCULATING THE COMPARATIVE PRICES
2. IN THIS CATEGORY PRICE ESCALATIONS WILL ONLY BE CONSIDERED IN TERMS OF THE FOLLOWING FORMULA:

$$Pa = (1 - V)Pt \left(D1 \frac{R1t}{R1o} + D2 \frac{R2t}{R2o} + D3 \frac{R3t}{R3o} + D4 \frac{D4t}{D4o} \right) + VPt$$

Where:

Pa = The new escalated price to be calculated.

(1-V)Pt = 85% of the original bid price.

Note that Pt must always be the original bid price and not an escalated price.

D1, D2 = Each factor of the bid price eg. labour, transport, clothing, footwear, etc.

The total of the various factors D1, D2... etc. must add up to 100%.

R1t, R2t = Index figure obtained from new index (depends on the number of factors used).

R1o, R2o = Index figure at time of bidding.
