CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Standard Bidding Document (SBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
 - a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.
 - b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.
- 4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

1. INTRODUCTION

1.1 BACKGROUND

The National Water Act (Act No. 36 of 1998) (NWA) is founded on the principle that National Government has overall responsibility for and authority over water resource management for the benefit of the public without seriously affecting the functioning of the natural environment. In order to achieve this objective, Chapter 3 of the NWA provides for the protection of all water resources, through the determination and implementation of the Reserve for these resources.

The Reserve is one of a range of measures aimed at the ecological protection of water resources and the provision of Basic Human Needs (BHN). The Reserve is defined in terms of the Ecological Water Requirements (EWR) of the resource and an assurance of supply provided at a defined spatial and temporal distribution together with the protection of the BHN requirements so as to ensure ecologically sustainable development and utilisation of a water resource.

The Chief Directorate: Water Ecosystems (CD: WE) is tasked with the responsibility to co-ordinate all Reserve determination studies. These studies include the surface water and groundwater components of water resources. The Reserve has priority over other water uses in terms of the National Water Act (Number 36 of 1998), and should be determined before license applications are processed, particularly in stressed and over utilised catchments.

These Terms of Reference (ToR's) concerns the EWR determination studies for rivers, wetlands, estuaries and groundwater resources in the Lower Orange (previously WMA 14) catchments at a comprehensive level.

1.2 OVERVIEW OF THE STUDY AREA

The Lower Orange WMA forms the lower reaches of the larger Orange river basin but excludes the Vaal river basin. This is the largest WMA in South Africa. The upstream part of the WMA lies around the town of Douglas near the confluence of the Orange and Vaal rivers. The WMA is bordered by the Lower Vaal, Upper Orange, Fish to Tsitsikamma, Breede and Olifants Doorn WMA's. The greater part of the WMA falls within the Northern Cape Province although a small portion falls within the Western Cape Province.

The area comprising the Lower Orange WMA is largely arid and experiences a harsh climate. It has the lowest mean annual rainfall in the country, varying from 400mm in the east to 50 mm per annum on the west coast. Potential evaporation can reach 3 000 mm per year (DWA, 2009).

The topography of the Lower Orange WMA is such that it is largely flat, with large pans or endorheic areas that do not contribute significant runoff to the Orange River system. The communities and activities that exist out of logistical reach of the main stem of the river rely heavily on groundwater supplies. The Vaal River is the main tributary to the Orange River, joining the main stem of the Orange River approximately 13km west of Douglas. Other tributaries include the Ongers, Hartebeest, Molopo and Fish. However, most of these rivers flow infrequently due to the low rainfall generated in this WMA and hence, little surface runoff exists (DWA, 2009).

In the west of the catchment are the rocky and barren Richtersveld Mountains and the north is covered by Kalahari sands. A complex geology exists south and westwards of the Orange River, with a variety of rich mineral deposits and shallow, rocky soils (DWA, 2009).

1.3 WATER RESOURCES OF THE WMA

The following are the water resources of the WMA;

1.3.1 River systems

The main river systems of the WMA include but not limited to Orange, Ongers, Hartebeest, Molopo and Fish.

1.3.2 Estuaries

The main estuary of this WMA is the Alexander Bay estuary formed as the Orange river enters the Atlantic Ocean. This estuary together with the wetland formed at the mouth has been declared a Ramsar site.

1.3.3 Wetlands

The main wetland is formed at the Alexander Bay estuary and has been declared a Ramsar site of international importance especially for providing a habitat to birds. This wetland has also been listed on the Montreux Record which is a record of Ramsar Wetlands that have undergone or are undergoing ecological degradation due to pollution or development.

1.3.4 Groundwater systems

The main aquifer types covering the WMA are that of the Karoo (Beaufort, Ecca and Dwyka). The other aquifer types occurring within the WMA are the dolomitic and primary aquifers.

2. STUDY MOTIVATION

The need to undertake detailed EWR and BHN studies for various water resource components became apparent due to mainly hydraulic fracturing (HF) that will be undertaken in the WMA, various water use licence applications, the conservation status of various Resources in this catchment and the associated impacts of proposed developments on the availability of water. Due to anticipated impacts that may occur as a result of HF, the protection of groundwater resources will have to be prioritised such that the EWR and BHN components as well as livelihoods are not adversely impacted. In the event of unavoidable adverse impacts mitigation measures will need to be set in anticipation of such impacts and where pollution of water resources would have occurred, remedial measures need to be undertaken.

Any additional/further work for the purpose of HF will be addressed at a comprehensive level during subsequent studies in the future.

The resultant high level of confidence in the EWR determination results will assist the DWS to make informed decisions regarding the authorisation of future water use and the magnitude of the impacts of the proposed developments.

It is important to note that the Orange – Senqu River Commission (ORASECOM) commissioned a study in 2009 to assess existing relevant environmental flow studies for the

entire Orange river basin. However this previous study only focussed on the major rivers of the basin. A more detailed intermediate level study also commissioned in 2011 by the ORASECOM focussed on the portion of the Orange river downstream of the confluence with the Fish river up to the Orange river estuary. This previous study covered both rivers and estuarine water resources. The proposed study will determine the EWR of all the water resources in the Lower Orange WMA and where the ORASECOM studies have been commissioned, gaps will be identified (e.g. groundwater and wetlands) and the aspects that were not covered in the study will be addressed.

The ORASECOM study must be consulted to determine the scope, extent and level of confidence of the EWRs/Environmental Flow Requirements (EFR) already determined. The latter is vital information to establish the priority water resources and components that have not been addressed as part of that study.

3. AIM AND OBJECTIVES OF THE PROJECT

The ToR's seeks to appoint a Professional Service Providers (PSP's) that will be responsible for conducting the study. The study will include managing the technical component (including technical coordination) as well as the project management component of the study. The appointed PSP can appoint representatives from his/her team to champion the different components although there will be one central reporting to the Client.

The determination of the EWR and BHN components for the identified water resources and ecosystems in the Lower Orange WMA shall consist of the following:

- The determination of the water quantity and quality component of the EWR and BHN for the rivers at various Ecological Water Requirement (EWR) sites;
- The determination of the water quantity and quality component of the EWR and BHN for the priority wetlands, pans and lakes, where applicable;
- The determination of the water quantity and quality component of the EWR and BHN of estuarine freshwater requirements for each identified estuary and
- The determination of the groundwater quantity and quality component of the EWR and BHN for each resource unit / quaternary catchment in the study area.

4. SCOPE OF WORK

The appointed PSP will determine the EWR and BHN components using the procedures as outlined in the RDM manuals.

4.1 PROJECT INCEPTION

This phase provides the PSP and DWS with the opportunity to have a common understanding of the project objectives. The aim of this task is for the PSP to initiate the project, mobilise the project team and consult with the Client regarding the development of a project Inception Report. Thus the role of the PSP will be to identify, assess and understand the nature and scope of the project and to ensure that it is in line with DWS requirements. The PSP is also expected to document all the relevant information currently available on the study area.

All aspects must be formulated into a Project Plan to be included in the Inception Report which will serve as a baseline from which progress can be monitored, evaluated and controlled against defined goals and performance measures including cost, time, and quality. The Project Plan should also cover all aspects of the project in sufficient detail to support work authorisation and execution, taking due note of the phased approach.

The Inception Report will form the basis of a contract between the Client and the PSP. Once the Client has approved the Inception Report and the contract has been signed, project implementation can commence.

4.2 REVIEW OF WATER RESOURCES INFORMATION AND DATA GATHERED

In this task, the existing literature, reports, models, maps, aerial photographs and any other relevant information for the study area, that are supportive to the determination of the EWR and BHN components, will be reviewed. It is expected that this task be run concurrently with the inception phase as the outcome of the information gap analysis will guide the rest of the project programme. This task therefore includes the following:

- Review all previous studies undertaken for the Lower Orange WMA including water resource planning, EWR and BHN determinations, water quality, socio-economic, augmentation and reconciliation strategies. Some of the key studies should include the ORASECOM environmental flow studies that were carried out in the study area.
- List available water resource models and evaluate their applicability in this study.
- Undertake a gap analysis and compile recommendations on how to deal with information and data gaps. An emphasis should be on the gaps of the ORASECOM environmental flow studies that were commissioned in the study area.

PSPs are expected to build the uncertainty that may lead to data and information shortfall/gap into the project plan and price in order to avoid future readjustment of the project budget and plan.

4.3 DETERMINATION OF THE EWR AND BHN COMPONENTS

In this phase the eight step procedure to determine the EWR and BHN components must be followed. The determination process must be extended to all forms of water resources that exist in the WMA. The PSPs shall be expected to undertake the tasks and activities as described in the project plan in accordance with the approach and methodologies proposed in the Inception Report. Some of the tasks that form the core of the study include the following:

- Conduct site selection and delineation of resource units/integrated units of analysis;
- Outline of the socio-economic water use in the study area;
- Determine the reference conditions, present ecological state and the ecological and socio-cultural importance and sensitivity of each resource unit. The results from this task shall be summarised in table format;
- Determine the EWR and BHN components at comprehensive level for groundwater,

rivers, wetlands and estuaries in the WMA. The results from this task shall be summarised in table format;

- The scaling (extrapolation and/or estimation) of the EWR determination results specifically for the rivers. This is to ensure that the EWRs at specific sites can be utilised on smaller and/or larger catchments for modelling purposes;
- The wetlands EWR determination method must be applied to the priority wetlands and for those wetlands where the EWR method is not the ideal approach, alternative measures could be applied e.g. ecospecs. Wetlands in the catchment should also be classified in terms of the following;
 - Their relative ecological importance and sensitivity in the landscape; and
 - Typing the wetlands in term of the Hydrogeomorphic (HGM) functions;
- Compile a list containing the following ecological details for any estuaries in the Lower Orange WMA:
 - The relative ecological importance and sensitivity;
 - The rank of the estuaries in terms of their present ecological status;
 - Determine the estuarine type for which the EWR need to be determined.
- Ensure the integration of the ecological requirements between the rivers estuaries and groundwater;
- Ensure the estimation of the following groundwater resource units and/or groundwater dependent ecosystems:
 - Recharge;
 - Baseflow;
 - Population and the associated BHN component;
 - Status category, recommended category, management option and stress index;
 - EWR availed from baseflow;
 - Allocable groundwater; and
 - Groundwater quality component and the potential impacts of hydraulic fracturing upon this.
- Assist in the compilation of the monitoring programmes for the surface and groundwater resources of the WMA;
- Analysis of groundwater quality and its vulnerability due to HF;
- Appoint an independent reviewer in liaison with the client for the review of the

study reports;

- Ensuring that all study documents, including specialists' reports are received in the format and quantities described and that all the project files are completed and transferred to DWS; and
- The final report should also contain information on the prescribed capacity building program and implementation thereof, for HDIs where available, and the skills transfer to DWS personnel with respect to different fields of study.

4.4 COMMUNICATION AND LIAISON

The study will be carried out under the guidance of a Project Management Committee comprising of representatives from the Client and the PSP. The PSP shall submit written progress reports to members of the PMC at least seven days before the PMC meeting date. He/she shall also present this information at the PMC meetings in a format agreed with the Client during the Study Initiation and Design phase.

As a guide, the PSP should plan for reporting at approximately 9 PMC meetings over a 24 month study period. Participation by the technical team leaders in 6 other ad-hoc meetings should also be budgeted for. Secretarial services at PMC meetings shall be provided by the PSP.

4.5 REPORTING

The appointed PSP shall produce at least the following project management outputs:

- Progress reports, technical memoranda and other material necessary to properly inform the Client and other stakeholders. Progress reports required for the project management meetings shall be compiled by the PSP and should document the progress of work against the programme, actual expenditure against cash flow estimates, significant findings and outcomes and corrective actions taken in respect of work programme and cash flow estimates;
- The progress reports shall be submitted every month and quarterly;
- Ensure that a complete record of proceedings of the project management meetings is maintained and appropriately archived;
- Technical progress should be provided after each defined deliverable in the form of an interim milestone report. These reports shall describe the procedures and methodologies followed and the results achieved. The latter shall be prepared and submitted to the Client according to the milestone programme. These reports will be used as supporting documents to write the main report and
- Report on project progress (financial, technical and human resources) at project management meetings and at other forums. All the payments by the Client should be done for specific deliverables by the PSP. The payments should also be synchronised to the project milestones and timelines.
- In addition to monthly reporting, the technical report should be provided after each

defined deliverable and will need to be approved by the client.

4.6 CAPACITY BUILDING

In terms of building capacity and ensuring skills transfer in the DWS, the PSP must establish a capacity building programme aligned to the skills development needs of identified officials responsible for water resources management in the study area. The PSP team shall develop a capacity building programme as part of the inception report.

This programme should include specific quantifiable measures to ensure that capacity building takes place throughout the project. Capacity building can be realised through the following mechanisms, namely:

- Participation of DWS officials (Chief Directorate: WE, RQS, Northern Cape Regional Office and any other affected DWS offices) to ensure active sharing of ideas and contribute to the broadening of the RDM skills base;
- The Client will consider to second DWS staff members to the appointed project team;
- Following consultation with the client, the proposed specialists will be required to identify and include Historically Disadvantaged Individuals (HDIs) as well as emerging companies (in the relevant discipline) and junior personnel in their teams in order to train and build capacity by maximising their involvement in the project and
- Local specialists and stakeholders (e.g. Local Authority, Environmental Groups, etc.) must be involved in the project. Through their participation, these groups must develop an understanding of water resource protection through the EWR and BHN component determination methodologies and its relevance. This will also assist in the enhancement of their understanding of the concepts of integrated water resource management and sustainable development.
