
RSA Ground Water Reserve Determination Map 2010

Description:
This map depicts the current status of surface water Reserve determinations for South Africa (Version 2, 2007). The map should be interpreted together with the associated tables (available from the CD: RDM). Where Quaternary Catchments are shaded, it serves only as an indication that one or more Reserves have been approved within that catchment, and may not be representative of the entire catchment.
The map was based on information at the time of printing and will be updated by RDM:SWRR on an annual basis. Separate maps have also been compiled for each WMA. These maps contain tables summarizing the information for each Reserve determination. These maps are available from the Chief Directorate: Resource Directed Measures and contain the tables referred to above.

Data sources:
Reserve Determinations: Directorate Resources Directed Measures (RDM); Dept. Water Affairs (DWA). Water Management Areas and Drainage Regions: Directorate Catchment Management; Dept. Water Affairs (DWA). Coastline, international boundaries, cities, towns, rivers and dams: Chief Directorate National Geospatial Information (NGI); Dept. Land Affairs.

LEGEND

- Main Cities
- Major Dams (Vaal River System)
- Rivers
- International Boundary
- Provincial Boundary
- Water Management Area Boundary

Drainage Region Boundaries

- Primary Drainage Region
- Quaternary Drainage Region
