**MINISTER OF WATER AND SANITATION**

**NATIONAL ASSEMBLY: QUESTION 3600 FOR WRITTEN REPLY**

A draft reply to the above mentioned question asked by Mr L J Basson (DA) is attached for your consideration.

**DRAFT REPLY: RECOMMENDED/ NOT RECOMMENDED/ AMENDED**

**ACTING DIRECTOR-GENERAL**

DATE: 30/11/2018

**DRAFT REPLY: APPROVED/ NOT APPROVED/ AMENDED**

**NKWINTI GE, MP  
MINISTER OF WATER AND SANITATION**

DATE: 03/12/2018

NATIONAL ASSEMBLY

FOR WRITTEN REPLY

QUESTION NO 3600

DATE OF PUBLICATION IN INTERNAL QUESTION PAPER: 23 NOVEMBER 2018  
(INTERNAL QUESTION PAPER NO. 42)

3600. Mr L J Basson (DA) to ask the Minister of Water and Sanitation:

- (1) (a) What is the (i) name and (ii) current safety status of each dam under the control of his department, (b) when last did the dam safety office of his department conduct safety inspections on each dam and (c) what was the outcome of the inspection in each case;
- (2) what mechanisms has his department put in place to deal with dams that pose safety risks?

NW4171E

**THE MINISTER OF WATER AND SANITATION**

- (1) Refer to **Annexure A** for the details on current safety status of each dam. In Part (1). Table 1 of the annexure explains the condition rating of the dam based on the most recent Dam Safety Evaluation (DSE) report by an Approved Professional Person (APP). Table 2 contains a list of category 2 and 3 dams which must be subjected to a five yearly DSE (*category 1 dams are excluded*). Condition rating system based on the outcome of a Dam Safety Evaluation (DSE) was implemented in 2016, which explains why only 72 dams on the list have a condition rating indicating their safety status as reviewed by the Dam Safety Office. Table 2 also indicates the dams that have been rehabilitated to improve their safety and will only be evaluated at least 5 years after construction completion as well as 41 dams that are currently been evaluated by APP's.
- (2) The outcomes of dam safety evaluations determine the type of intervention/mechanism required to address the safety risk. These interventions/mechanisms could either be maintenance related or capital intensive where dam rehabilitation is required. For maintenance related issues the Cluster or Operation Managers are usually tasked to address these as part of routine maintenance as prescribed in the operations and maintenance manuals. For capital intensive safety risks are addressed through Dam Safety Rehabilitation Programme (DSRP).

---00000---

Table 1: Dam Safety: Proposed Score Card for the Condition of a Dam

Symbol /Score	Analysis of condition from the Recommendations and Findings of a Dam Safety Evaluation Report by an APP
A	Dam in good condition and routine maintenance are acceptably up to date. An evaluation interval of longer than 5 years can be recommended (if the owner request it or for farmers/ smaller municipalities.)
B	Dam in reasonable condition but not complying to modern standards. Only routine maintenance and routine inspections recommended. An evaluation interval of longer than 5 years cannot be recommended.
C	Significant outstanding maintenance by the normal operation and maintenance staff recommended restoring dam to a functional state. Elementary monitoring systems like settlement beacons and flow monitoring included here.
D	Significant rehabilitation recommended to restore dam components to its original state for example repair major erosion or cavitation's, repair slope protection, reinstate crest level, refurbish outlet works or gates. Work is considered significant rehabilitation if it is outside the capacity of the normal operation and maintenance staff and the appointment of a contractor is necessary and the work should be done under guidance of an APP. Drafting of an Operation and Maintenance Manual and or Emergency Preparedness Plan and install sophisticated monitoring instruments under guidance of an APP also included here.
E	Upgrading recommended for example increase spillway capacity, increase freeboard, provide buttress / thicken dam to improve stability or install stress cables, install slope protection, install additional drainage or grouting or water seals to reduce leakage. A licence to alter and the services of an APP will be required.
F	Dam unsafe. Restrictions on operation recommended, for example water level may not exceed a specified level.

Table 2: List of DWS owned dams (Category II and III only)
