# **DEVELOPMENT OF A RECONCILIATION STRATEGY FOR THE LUVUVHU AND LETABA WATER SUPPLY SYSTEM**

## **Water Conservation and Water Demand Management Strategy and Business Plan Report**

### **EXECUTIVE SUMMARY**

*The Department of Water Affairs (DWA) has identified the need for the Reconciliation Study for the Luvuvhu-Letaba WMA. The WMA is almost fully developed and demands from the Letaba River currently exceed the yield capability of the system. Regulation for the Letaba WMA is mainly provided by Middle Letaba, Ebenezer and Tzaneen Dams. In the Luvuvhu WMA, the recently completed Nandoni Dam will be used in combination with Albasini, Vondo and Damani dams to be managed as one system. It is expected that the total yield from this combined system will be fully utilized by around 2020, considering only the current planned projected demands. The yield of the Albasini Dam has reduced over the years and as a consequence the dam is over allocated. The Shingwedzi catchment is situated almost entirely in the Kruger National Park and for all practical purposes no sustainable yield is derived from surface flow in the Shingwedzi catchment.*

*The main objective of the study is to compile a Reconciliation Strategy. This strategy will identify and describe water resource management interventions that may be grouped and phased to jointly form a solution to reconcile the water requirements with the available water for the period up to the year 2040. It will be used to develop water availability assessment methodologies and tools applicable to this area that can be used for decision support as part of future compulsory licensing. The development of the strategy requires reliable information on the water requirements and return flows (wastewater), as well as the available water resources for the current situation and likely future scenarios for a planning horizon of thirty years.*

*To achieve the above objectives, the following main aspects will be covered in the study:*

- *Update the current and future urban and agricultural water requirements and return flows;*
- *Assess the water resources and existing infrastructure;*
- *Configure the system models (WRSM2005, WRYM, WRPM) in the Study Area at a quaternary catchment scale, or finer where required, in a manner that is suitable for allocable water quantification;*
- *To firm up on the approach and methodology, as well as modelling procedures, for decision support to the on-going licensing processes;*
- *To use system models, in the early part of the study, to support allocable water quantifications in the Study Area and, in the latter part of the study, to support on-going licensing decisions, as well as providing information for the development of the Reconciliation Strategy;*
- *Formulate reconciliation interventions, both structural and administrative/regulatory;*
- *Document the reconciliation process including decision processes that are required by the*

*strategy; and*

- *Conduct stakeholder consultation in the development of the strategy.*

### **WC/WDM**

*As part of the development of the overall Luvuvhu-Letaba Reconciliation strategy, the WC/WDM component of the study focused on the following key aspects:*

- *Preparing a baseline of current water losses and potential savings in the Luvuvhu-Letaba WMA;*
- *Completing WC/WDM performance score cards to identify strengths, weaknesses, opportunities and threats;*
- *Identifying potential interventions, complete with budgets and time lines;*
- *Preparing water balance diagrams for the municipalities under investigation, complete with system yields versus demand curves with and without WC/WDM; and*
- *Developing high level WC/WDM strategies and business plans for the municipalities within the Luvuvhu-Letaba WMA.*

*The status quo review conducted for the WSAs revealed the following critical challenges existing in the key demand centres, which pose an impediment to service delivery and negatively impact the implementation of WC/WDM in the WMA.*

### **Institutional**

- *High vacancy levels in the technical departments;*
- *WC/WDM skills shortages, particularly at the operations and maintenance levels in the WSAs and WSPs;*
- *Limited training and capacity building to capacitate technical personnel;*
- *Limited support structures to enable the implementation of WC/WDM;*
- *Slow and unresponsive supply chain processes;*
- *Political constituencies that are ill equipped to support the achievement of improved service delivery;*
- *Inadequate or obscure channel of reporting and communication between the WSAs and WSPs; and*
- *Poor communication between the technical and financial departments at the WSP level.*

### **Financial**

- *Uncoordinated tariff setting process;*
- *Tariffs set neither promote WC/WDM nor reflect the cost of water service provision; and*
- *Poor understanding of billing process due to limited communication.*

### **Social**

- *General lack of consumer engagement and participation;*
- *Absence of coordinated consumer awareness programmes;*
- *Limited support structures to aid reporting of water related challenges; and*

- *A generally unhappy and uncooperative consumer base.*

### **Technical**

- *Poor quality and availability of macro and micro management information;*
- *Limited bulk metering, sectorisation, zone metering and information analysis;*
- *Significant infrastructure upgrade backlogs;*
- *Limited proactive asset maintenance;*
- *High prevalence of illegal connections in the rural settlements; and*
- *Limited asset registers that do not fully incorporate or reflect the existing infrastructure.*

*In view of the challenges noted above arising from the discussions held with the WSAs and WSP, the following recommendations are made:*

### **Institutional Strategy**

*The key intervention for the WSAs within the Luvuvhu-Letaba WMA will be to address the considerable vacancies or shortages in human resources and skills. Ideally, dedicated individuals or sections should be established in order to drive Water Conservation and Demand Management. Specialised training in WC/WDM is pertinent to support the municipal personnel in undertaking the required water loss reduction activities, particularly at the management level where guidance and leadership is required to drive demand management. It is also crucial that the lines of communication are opened between the different municipal departments in order to aid more efficient access to information, which will allow for more effective and coordinated planning. In this regard, an NRW steering committee comprising of the relevant councillors, finance representatives, communication and the technical department can be established to facilitate improved reporting and management of NRW. Procurement processes during and after the transition period must also be streamlined in order to enable swifter access to support structures required for operations and maintenance tasks, which are necessary to mitigate water losses in the systems.*

### **Social Strategy**

*Extensive and continuous consumer water education programmes are required which will focus on the community and other key water users, including agricultural users and institutions such as schools, which are potent avenues for the reduction of water losses. The installation of water efficient devices, as well as rain water harvesting; are also avenues which can further be explored for promotion and implementation in different sectors. These devices can aid water loss reduction at the consumer level, particularly in areas where metering and billing cannot immediately be effected, and where cost recovery is very low due to high indigent populations. Structures should also be put in place to support consumers in reporting leakage and other service related complaints. The complaints should be captured electronically in order to allow proper tracking and analysis of water loss contributors and significant problem areas. The political leadership should ideally lead these interventions and provide substantial support in order to improve the sustainability of the community based interventions.*

### **Financial Strategy**

*As a first step, meter audits should be undertaken for the non-domestic consumers in order to identify unmetered connections and non-functional meters which could, in the short term, significantly improve cost recovery. Furthermore, it is imperative that the tariff setting process include inputs from the technical departments which could assist in making the tariffs increasingly effective in achieving the water use efficiency objectives. National Treasury has been very vocal on the dependency of municipalities on grant funding. It has emphatically expressed the need for municipalities to actively demonstrate a commitment to proper budgeting, planning and cost recovery, with a focus on demand side management as a first step in managing and more effectively utilising the available resources. The aforementioned requires closer monitoring of consumers, particularly the top consumers, as well as an effective system to capture and refer billing related complaints and progressive payment of services in the municipalities, which must be supported and preceded by proper community awareness and education, and widespread public engagement.*

### **Technical Strategy**

*As a first step, measurement of the system input volumes is required to determine the extent of water losses in the WMA, particularly in the Mopani District. Sectorisation and zone metering and monitoring is also required in the majority of the municipalities in the WMA to aid in the micro management of the system once bulk metering has taken place. The installation of meters is only the first step and will be altogether useless if the information is not captured and monitored on a monthly basis. Proper budgets must also be set aside for proactive infrastructure asset maintenance. There is a substantial maintenance backlog in the municipalities in the WMA, with a significant number of access challenges being caused simply by the age of the existing infrastructure. Passive leak detection through community reporting would greatly enhance the ability of the WSPs to monitor the network and explore potential for pressure management in selected areas experiencing high pipe burst frequencies. The location of infrastructure requires clarification in order to identify aspects of the network which are able to provide services to the consumers. There is a need to develop digital as-built drawings of the network which must be accompanied by the development of a comprehensive asset register incorporating critical information such as the age of the infrastructure, replacement period and cost, as well as the location of the assets. Through such interventions, substantial community-based employment can be created where indigent residents can be appointed and utilised to clean and locate the infrastructure.*

### **Conclusion**

*Results from the study are summarised as follows:*

- There is a large part of the study area which has formal infrastructure, which enables effective metering and billing;*
- The average consumption in the urban areas is very high and there is scope for reduction, which is expected to reduce the total demand and non-revenue water;*
- The rural areas are characterised by intermittent supply with limited cost recovery and consumers revert to illegal connections to obtain water;*

- *The average consumption in the rural areas is within the acceptable range but there is huge inequality of supply. Any reduction will be redistributed with limited, or no reduction, in the total demand;*
- *The water tariffs in certain areas are not cost reflective and do not promote water conservation and water demand management;*
- *The municipalities lack funding to implement WC/WDM;*
- *The municipalities require additional staff to address and implement WC/WDM;*
- *Asset management lacks in some of the areas, which impacts on the assurance of supply; and*
- *Municipalities are grant dependant and have very high debtors.*

*Based on the above, the following key strategic focus areas are recommended :*

- *Raise WC/WDM awareness within the organisation by setting-up a WC/WDM task team, chaired by senior officials or MMC, to meet on monthly basis to address WC/WDM issues;*
- *Fill vacant positions and provide training and capacity building;*
- *Improve metering, reading, billing and cost recovery;*
- *Review the water tariff structure to be most cost reflective and promote WC/WDM;*
- *Improved tariff structures and cost recovery will increase revenue for the municipality which can be used to address the backlog in maintenance and improve service delivery;*
- *Implementing metering and cost recovery in the rural areas present several challenges and fixing internal plumbing leakage, using local plumbers, is recommended until such time as the system has stabilised and service delivery has improved;*
- *Implement awareness campaigns across all consumers to use water efficiently; and improve management information through proper monthly reporting and records keeping. These reports should be discussed at the monthly EXCO meeting.*

# **DEVELOPMENT OF A RECONCILIATION STRATEGY FOR THE LUVUVHU AND LETABA WATER SUPPLY SYSTEM**

## **Water Conservation and Water Demand Management Strategy and Business Plan Report**

### **1 INTRODUCTION**

#### **1.1 BACKGROUND**

The Department of Water Affairs (DWA) has identified the need for the Reconciliation Study for the Luvuvhu-Letaba Water Management Area (WMA). The WMA is almost fully developed and demands from the Letaba River currently exceed the yield capability of the system. Regulation for the Letaba is mainly provided by Middle Letaba, Ebenezer and Tzaneen Dams. The recently completed Nandoni Dam located in the Luvuvhu basin will be used in combination with Albasini, Vondo and Damani dams, to be managed as one system. It is expected that the total yield from this combined system will be fully utilized by around 2020, considering only the current planned projected demands. The yield of the Albasini Dam has reduced over the years and as a consequence the dam is over allocated. The Shinwedzi catchment is situated almost entirely in the Kruger National Park and for all practical purposes, no sustainable yield is derived from surface flow in the Shingwedzi catchment.

The main urban areas in these catchments are Tzaneen and Nkowakowa in the Groot Letaba River catchment, Giyani in the Klein Letaba River catchment and Thohoyandou and Makhado (Louis Trichardt) in the Luvuvhu catchment. An emergency water supply scheme to transfer water from Nandoni Dam is currently under construction to alleviate the deficits of the stressed Middle Letaba sub-system in the Letaba River basin. Other future developments planned to be supplied from Nandoni Dam will utilize the full yield available from the Nandoni sub-system by 2021, without supporting Giyani. Supporting Giyani from Nandoni will bring this date forward to approximately 2018

Intensive irrigation farming is practised in the upper parts of the Klein Letaba River catchment (upstream and downstream of the Middle Letaba Dam), the Groot Letaba (downstream of the Tzaneen Dam) and Letsitele rivers, as well as in the upper Luvuvhu River catchment. Vegetables (including the largest tomato production area in the country), citrus and a variety of sub-tropical fruits such as bananas, mangoes, avocados and nuts are grown. Large areas of the upper catchments have been planted with commercial forests in the high rainfall parts of the Drakensberg escarpment and on the Soutpansberg. The area, particularly the Groot Letaba sub-area, is a highly productive agricultural area with mixed farming, including cattle ranching, game farming, dry land crop production and irrigated cropping. Agriculture, with the irrigation sector in particular, is the main base of the economy of the region. Large scale utilization of the groundwater resource occurs mostly downstream of the Albasini Dam in the Luvuvhu catchment, where it is used by

irrigators as well as in the vicinity of Thohoyandou where it is used to supply rural communities. The limited mineral resources in the Luvuvhu basin are dominated by deposits of coking (metallurgical) coal in the northeast near Masisi. In addition to irrigation water supply from the dams in the study area, the towns, villages and rural settlements are also supplied with potable water.

DWA and other institutions involved in the management of the water resource and supply systems of the Luvuvhu-Letaba catchments have, in the past, carried out various studies on intervention measures to improve the water supply situation. The knowledge base that has been created by these studies provides a sound and essential platform from which the Reconciliation Strategy will be developed. In order to harness this information a Literature Review Report (DWA, 2013) was compiled to summarise the available information in one document and also to present a synthesis of the information by highlighting the pertinent aspects of Integrated Water Resource Management that will be assessed and incorporated in the Reconciliation Strategy.

## **1.2 MAIN OBJECTIVES OF THE STUDY**

The main objective of the study is to compile a Reconciliation Strategy. This strategy will identify and describe water resource management interventions that may be grouped and phased to jointly form a solution to reconcile the water requirements with the available water for the period up to the year 2040. It will be used to develop water availability assessment methodologies and tools applicable to this area that can be used for decision support as part of future compulsory licensing. The development of the strategy requires reliable information on the water requirements and return flows (wastewater), as well as the available water resources for the current situation and likely future scenarios for a planning horizon of thirty years.

To achieve the above objectives, the following main aspects will be covered in the study:

- Update the current and future urban and agricultural water requirements and return flows;
- Assess the water resources and existing infrastructure;
- Configure the system models (WRSM2005, WRYM, WRPM) in the Study Area at a quaternary catchment scale, or finer where required, in a manner that is suitable for allocable water quantification;
- To firm up on the approach and methodology, as well as modelling procedures, for decision support to the on-going licensing processes;
- To use system models, in the early part of the study, to support allocable water quantifications in the Study Area and, in the latter part of the study, to support on-going licensing decisions, as well as providing information for the development of the reconciliation strategy;
- Formulate reconciliation interventions, both structural and administrative/regulatory;
- Document the reconciliation process including decision processes required by the strategy; and
- Conduct stakeholder consultation in the development of the strategy.

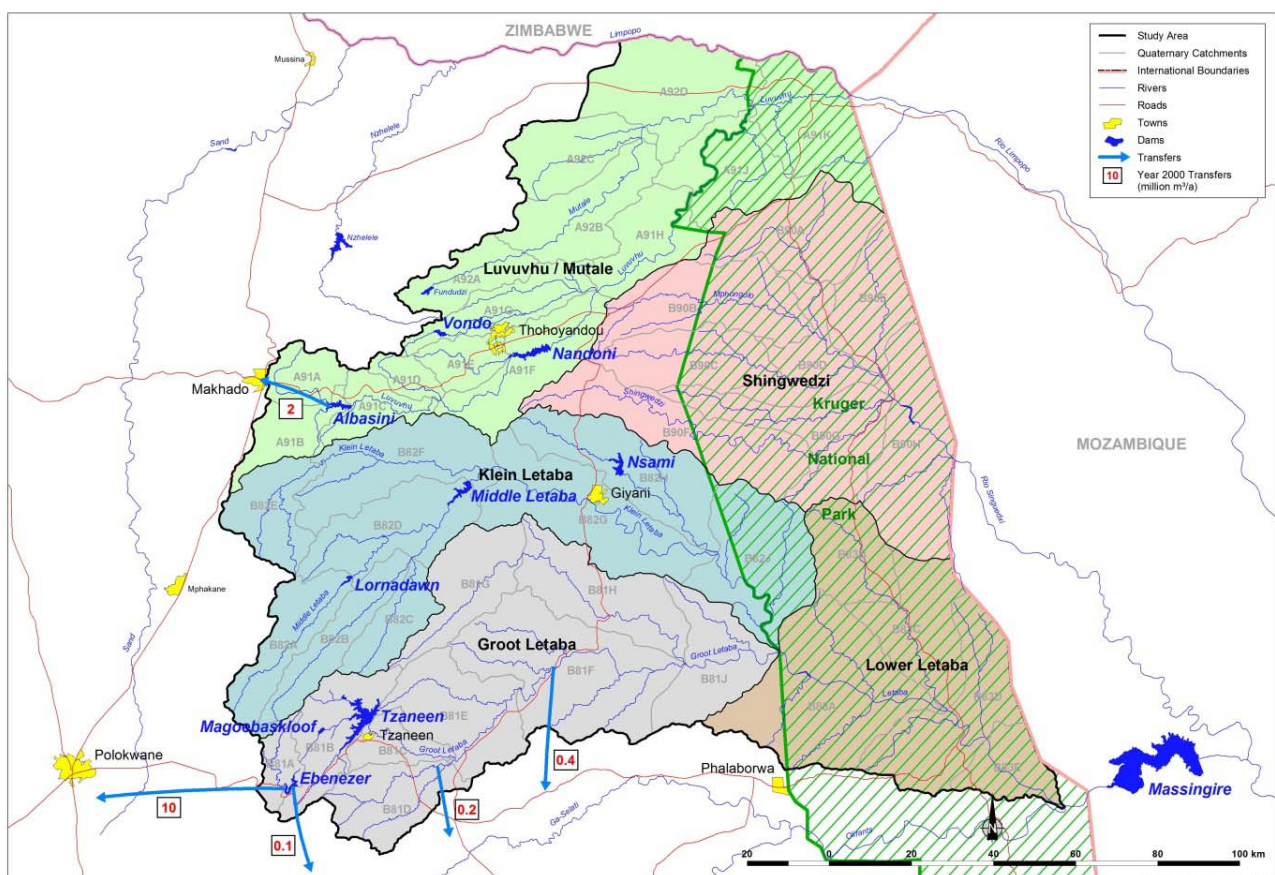

## **1.3 STUDY AREA**

The study area comprises of the water resources of the catchment of the Luvuvhu, Mutale, Letaba and Shingwedzi rivers linked to adjacent systems - as indicated by the inter-basin transfers on

**Figure 1.1.** This area represents the entire WMA 2 and includes tertiary catchments A91, A92, B81, B82, B83 and B90. Adjacent areas supplying water to this WMA or receiving water from this WMA are also part of the study area.

The Luvuvhu-Letaba WMA is located in the north-eastern corner of South Africa, where it borders on Zimbabwe in the north and Mozambique along the eastern side. It falls entirely within the Northern Province, and adjoins the Olifants and Limpopo WMAs to the south and west respectively. The Luvuvhu-Letaba WMA forms part of the Limpopo River Basin, an international river shared by South Africa, Botswana, Zimbabwe and Mozambique.

Approximately 35% of the land area of the WMA along the eastern boundary falls within the Kruger National Park. The rivers flowing through the park are of particular importance to the maintenance of ecosystems.

**Figure 1.1: Study Area**

The confluence of the Luvuvhu and Limpopo Rivers forms the common point where South Africa borders on both Zimbabwe and Mozambique. The Shingwedzi River first flows into the Rio des Elephants (Olifants River) in Mozambique, which then joins the Limpopo River.

The two main branches of the Letaba River, the Klein and Groot Letaba, have their confluence on the western boundary of the Kruger National Park. The Letaba River flows into the Olifants River just upstream of the border with Mozambique.

The topography is marked by the northern extremity of the Drakensberg range and the eastern Soutpansberg, which both extend to the western parts of the water management area, and the characteristic wide expanse of the Lowveld to the east of the escarpment. Climate over the water

management area is generally sub-tropical, although mostly semiarid to arid. Rainfall usually occurs in summer and is strongly influenced by the topography.

Along the western escarpment rainfall can be well over 1 000 mm per year, while in the Lowveld region in the eastern parts of the water management area rainfall decreases to less than 300 mm per year and the potential evaporation is well in excess of the rainfall. Grassland and sparse bushveld shrubbery and trees cover most of the terrain, marked by isolated giant Boabab trees.

The geology is varied and complex and consists mainly of sedimentary rocks in the north, and metamorphic and igneous rocks in the south. High quality coal deposits are found near Tsikondeni and in the northern part of the Kruger National Park. The eastern limb of the mineral rich Bushveld Igneous Complex touches on the southern parts of the WMA. With the exception of sandy aquifers in the Limpopo River valley, the formation is of relatively low water bearing capacity. A wide spectrum of soils occurs in the WMA, with sandy soils being most common.

#### **1.4 PURPOSE OF THIS REPORT**

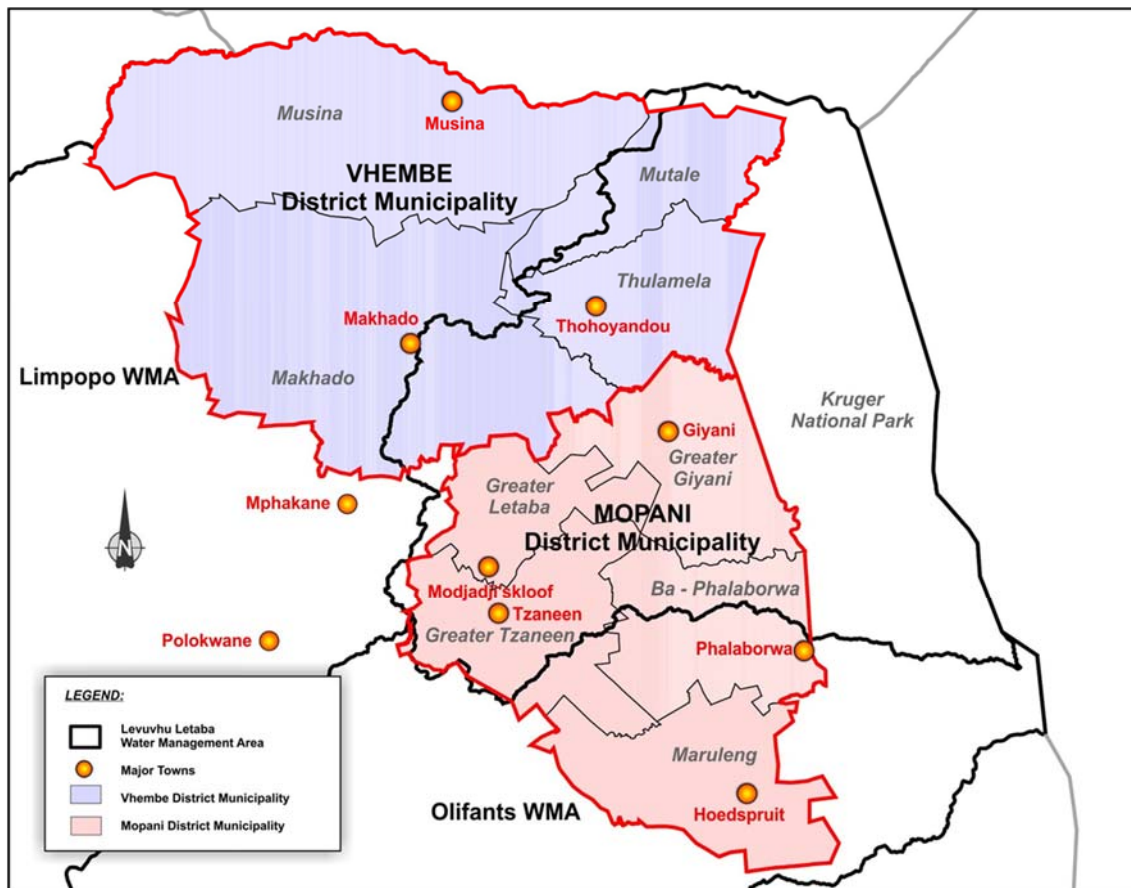

The purpose of this report is to document and to review the contents of water conservation and water demand management (WC/WDM) strategies developed by key Water Services Authorities (WSA). Based on the review, realistic estimates were made of the potential savings, cost implications and programme of implementation. This will form part of the development of possible future water demand projection scenarios.

The following specific WC/WDM task objectives to aid future planning in the Luvuvhu Letaba WMA were identified:

- Prepare a baseline of current water losses and potential savings in the Luvuvhu Letaba WMA;
- Complete WC/WDM performance score cards to identify strengths, weaknesses, opportunities and threats;
- Identify potential interventions, complete with budgets and time lines;
- Prepare water balance diagrams for the municipalities under investigation complete with system yields versus demand curves with and without WC/WDM; and
- Develop high level WC/WDM strategies and business plans for the municipalities within the Luvuvhu Letaba WMA.

The study area includes, or partly includes, the Water Services Authorities of Vhembe DM and Mopani DM as their associated local municipalities. Also included is Polokwane Local Municipality which receives water from this WMA. The study area is shown in **Figure 1.2**.

This task was undertaken as part of the DWA study titled *Development of a First Order Water Conservation and Water Demand Management Strategy and Business Plan for Various Municipalities under the DWA Rapid Response Programme - Limpopo Province*. By combining the results from the two studies, it was possible to cover all the municipalities within the two WSAs although these municipalities fall outside the official study area.

**Figure 1.2: Location of District Municipalities**

The municipalities investigated are shown in **Table 1.1** below.

**Table 1.1: Summary of district and local municipalities included**

| Municipal Code | Municipality    | Category | WSA |
|----------------|-----------------|----------|-----|
| DC33           | Mopani DM       | C2       | Yes |
| LIM331         | Greater Giyani  | B4       | No  |
| LIM332         | Greater Letaba  | B4       | No  |
| LIM333         | Greater Tzaneen | B4       | No  |
| LIM334         | Ba-Phalaborwa   | B3       | No  |
| LIM335         | Maruleng        | B4       | No  |
| DC34           | Vhembe DM       | C2       | Yes |
| LIM341         | Musina          | B3       | No  |

## 1.5 DEMOGRAPHICS

More than 80% of the population in the Luvuvhu Letaba WMA is rural based, with most living in informal and rural villages. The urban population is mostly found in towns such as Tzaneen, Nkowankowa, Giyani and Thohoyandou. The population figures as identified as part of the demographic component of this study are tabled in **Table 1.2**.

**Table 1.2: Vhembe DM and Mopani DM Demographic Profile**

| ID        | District Municipality | Local Municipality | Major city/town         | Population | Households |
|-----------|-----------------------|--------------------|-------------------------|------------|------------|
| DC33      | Mopani                | Greater Giyani     | Giyani, Hluphekani      | 275 809    | 62 343     |
|           |                       | Greater Letaba     | Kgapane, Modjaji'skloof | 268 398    | 63 087     |
|           |                       | Greater Tzaneen    | Tzaneen, Nkowankowa     | 392 426    | 92 138     |
|           |                       | Ba-Phalaborwa*     | Phalaborwa, Namakgale   | 155 599    | 39 484     |
|           |                       | Maruleng*          | Hoedspruit              | 108 449    | 25 811     |
| Sub total |                       |                    |                         | 1 200 681  | 282 863    |
| DC34      | Vhembe                | Musina*            | Musina, Nancefield      | 51 892     | 12 525     |

| Total     |                       |                    |                         | 3 011 295  | 707 195    |

Source: Population figures from the Department of Water Affairs, Reconciliation Strategy for the Luvuvhu and Letaba Water Supply System – 2012 and \* Water Infrastructure Status & Intervention Plans.

**Note:** (\*) Represent municipalities outside the reconciliation study area but form part of the Water Services Authority.

Polokwane is the largest town in the study area with Mutale municipality having no major city as core. Thulamela municipality has the largest population of which most are rural.

## **2 STUDY METHODOLOGY**

This project was undertaken in four main tasks, the details of which are discussed in the following sections.

### **2.1 TASK 1: COLLECT AND COLLATE PREVIOUS STUDIES**

The WC/WDM component of the study combined the collection of both qualitative and quantitative data. NRW water balance data was obtained and consolidated from a variety of sources, including WSDP's, IDP's, Blue Drop – Green Drop Assessments, the MuSSA, as well as reports and data submitted by the municipalities. Preliminary WC/WDM status quo assessments were conducted with Polokwane Municipality as well as the Vhembe and Mopani Districts respectively, as the Water Services Authorities falling within the Levhuvhu Letaba WMA. Each of the local municipalities falling within the DMs and Polokwane were approached directly in order to obtain the required information.

The water authorities were requested to complete water balances and scorecards. The objective of the forms was to determine the status quo and if there is scope for water loss reduction in the supply systems. Both the water balance and scorecard have been developed by the project team for the Water Research Commission, and provide a high level assessment of the potential of WC/WDM in the area.

### **2.2 TASK 2: MUNICIPAL WORKSHOPS**

The assessments under Task 1 were undertaken to gain a complete understanding of the existing water supply networks, their operation and key problems. This includes a brief review of the existing condition of the infrastructure, the operation of the system, levels of cost recovery and management practices.

The SABS 0306:1999 Code of practice for the Management of potable water in distribution zones provides guidelines on the management, administration and operational functions required by water services authorities in order to account for potable water within their distribution systems and to apply corrective actions to reduce and control water. The assessments conducted have been evaluated in terms of these guidelines to assess the scope for water loss reduction in the WMA.

Having reviewed the various existing information sources for each demand centre, meetings were arranged with the WSAs to discuss the WC/WDM strategy development methodology, as well as to discuss the findings extracted from the existing data sources. The main objective of these meetings was to establish:

- Status quo on the implementation of the WC/WDM strategy;
- Discussion of water balance and scorecard;
- Results from the various interventions;
- Problems and possible solutions for implementing a WC/WDM project; and
- Prioritising of key projects and development of a realistic implementation programme.

The quantitative base data collected included demographic data, tariff information as well as

figures pertaining to the number of industries and public institutions present in the LMs. The modified IWA Water Balance for South Africa was utilised to capture and calculate the water balances for the LMs as shown in **Figure 2.1**. The municipalities were requested to complete a quantitative score card which allowed the municipality to assess the areas of WC/WDM requiring a more concerted effort. In addition to the quantitative data component, a comprehensive qualitative questionnaire was developed for discussion purposes with the municipalities. The questionnaire was aimed at gathering detailed information from the municipalities under investigation pertaining to the adequacy of institutional aspects of the organisation to support demand management, the availability of materials, vehicles and other support structures to aid in the implementation of WC/WDM. It also assessed the efficacy of the metering and billing systems, levels of political support, customer relations and support services, asset management as well as the nature, level and frequency of the technical interventions undertaken to ensure proper management of the water systems and NRW reduction. This questionnaire formed the bulk of the status quo assessment visits, and the open ended nature of the questions allowed the respondents to provide comprehensive information related to the perceived functioning of the municipalities.

| System<br>Input<br>Volume | Authorised<br>Consumption | Billed<br>Authorised<br>Consumption   | Billed Metered Consumption                                      | Free basic<br>Revenue<br>Water |
|---------------------------|---------------------------|---------------------------------------|---|--------------------------------|
|                           |                           |                                       | Billed Unmetered Consumption                                    |                                |

|                           |                           |                                       | Leakage on Transmission and<br>Distribution Mains               |                                |
|                           |                           |                                       | Leakage and Overflows at<br>Storage Tanks                       |                                |
|                           |                           |                                       | Leakage on Service Connections<br>up to point of Customer Meter |                                |

**Figure 2.1: Modified IWA Water Balance**

Through the discussion, the project team attempted to identify the “quick fix” projects whereby major savings can be achieved for limited capital investment.

### 2.3 TASK 3: STRATEGY AND BUSINESS PLAN DEVELOPMENT

Based on the results from Tasks 1 and 2, strategy and business plans were developed for each municipality. This strategy focuses on the following aspects:

- Reduction of water losses;
- More efficient use of existing water supplies;
- Deferred construction of new facilities;
- Increased revenues; and

- Decreased expenditure on purchasing or producing water, due to lower volumes of water required, reduced power costs, reduced chemical costs, etc.

The results from this task are included in a realistic WC/WDM strategy and business plan which assess the potential savings, the cost implications and programme for implementation. The strategy was forwarded to the respective WSAs for approval and implementation in each of the demand centres (refer to **Appendix A** for the full strategy documents).

## **2.4 TASK 4: REVIEW STRATEGIES AND BUSINESS PLANS**

It is imperative that the targets set in the strategy are realistic and the goals are met as it has a direct implication on future augmentation schemes. The WC/WDM strategies will be reviewed after 18 months to assess whether the targets have been met.

Should it be found that the targets are unrealistic; the WC/WDM will be changed accordingly.

### 3 STATUS QUO ASSESSMENT

The Vhembe and Mopani District municipalities as well as Polokwane were the first institutions to be assessed as the Water Services Authorities within the study area. Although these municipalities were initially assessed under the Rapid Response Programme, the issues discussed with the municipalities during the interviews remained relevant for the Luvuvhu-Letaba assessment.

#### 3.1 HISTORICAL WATER REQUIREMENTS

Historical water consumption figures were obtained from the WSDP and previous reports. There are huge discrepancies between the various sources of information as shown in **Figures 3.2 and 3.3**.

**Table 3.1: Mopani DM Water Requirements**

| Municipality           | Population |                  | System Input Volume (Million m <sup>3</sup> ) |              | I/c/d      |
|------------------------|------------|------------------|---|--------------|------------|
|                        | Source     | Adopted          | Source  | Adopted      | Adopted    |
| Greater Giyani         | LLRS       | 275 809          | WISIP   | 18.85        | 187        |
| Greater Letaba         | LLRS       | 268 398          | Lepelle                                       | 13.3         | 147        |
| Greater Tzaneen        | LLRS       | 392 426          | Blue Drop/All Town                            | 14.55        | 102        |
| Ba-Phalaborwa*         | WISIP      | 155 599          | WISIP   | 23.66        | 417        |
| Maruleng *             | WISIP      | 108 449          | All Town                                      | 4.40         | 112        |

**Table 3.2: Vhembe DM Water Requirements**

| Municipality           | Population |                  | System Input Volume (Million m <sup>3</sup> ) |              | I/c/d      |
|------------------------|------------|------------------|---|--------------|------------|
|                        | Source     | Adopted          | Source  | Adopted      | Adopted    |
| Musina*                | WISIP      | 51 892           | Musina LM                                     | 4.96         | 262        |
| Mutale                 | LLRS       | 94 639           | Mutale LM                                     | 9.63         | 279        |
| Thulamela              | LLRS       | 616 711          | WISIP   | 41.07        | 187        |
| Makhado                | LLRS       | 416 054          | LLRS  | 19.60        | 129        |
| <b>Mopani DM Total</b> |            | <b>1 179 296</b> |   | <b>75.25</b> | <b>140</b> |

Source: Department of Water Affairs, Water Infrastructure Status & Intervention Plans – 2012

There are major discrepancies between the various information sources as depicted in **Table 3.1** and **Table 3.2** and engineering judgement combined with knowledge of the area was used to assess the current consumption. The estimated water consumption is further complicated by the intermittent supply problems experienced in the area.

The average consumption in Mopani DM is well in line with the national average of 236ℓ/c/d, but the results indicate that the supply is inequitable with scope for reduction in the urban areas. The average supply in Vhembe is considerably lower but also inequitable. The average consumption is also in line with the generally low level of service experienced in the area.

### 3.2 WATER BALANCE AND KPI

The existing information from the Ministerial NRW assessments and other sources were utilised and modified to include all the requirements of the Water Services Audit. The database was populated with the basic information required to run the IWA water balance model.

Where there was limited information available as shown in **Figure 3.1** and **Figure 3.2** below, estimates were calculated in order to complete the water audit for all nine municipalities within the WSAs that makes up Luvuvhu Letaba Water Management Area.

**Figure 3.1: Mopani DM IWA Water Balance (million m<sup>3</sup>/a)**

**Figure 3.2: Vhembe DM Historical Data (million m<sup>3</sup>/a)**

Based on the results from **Figure 3.1** and **Figure 3.2**, it is apparent that non-revenue water challenges facing Vhembe and Mopani DM are similar in many respects to problems experienced by numerous other municipalities throughout South Africa. Payment for services is very low in the study area and the consumers that are able to pay for services can maintain their domestic water supply systems. In the rural and low-income areas, however, many consumers who cannot afford to pay for their water rely mostly on the free basic water allowances.

The standard IWA Non-Revenue Water Balance template was utilised to capture and calculate the water balances for each of the District Municipalities (WSAs). The results and key performance indicators are summarised in **Table 3.3** below.

**Table 3.3: KPI's**

| Indicator                                       | Vhembe DM | Mopani DM | Polokwane LM |
|---|-----------|-----------|--------------|
| Annual input volume (million m <sup>3</sup> /a) | 75.25     | 74.80     | 34.6         |
| Daily input volume (Ml/d)                       | 206       | 204       | 95           |
| Population                                      | 1 179 296 | 1 200 681 | 631 318      |
| Number of households                            | 270 352   | 282 863   | 153 980      |
| % Non-revenue water                             | <55%      | <65%      | 45%          |
| ℓ / capita / day                                | 140       | 164       | 150          |
| m <sup>3</sup> / household / month              | 19        | 21        | 19           |

**Table 3.3** indicates that the average water consumption is within the acceptable range but non-revenue water is very high and it is expected that the demand is currently curbed by the poor supply in some areas. The results are based on estimates and the municipalities urgently need to address the poor management information.

In order to address water challenges in the study area, many WC/WDM interventions can be considered. Each municipality within the WMA has its own unique problems to some extent although the main underlying issues are often similar. Before deciding on how to address the problems, it is first necessary to understand them. To this end, an overview of all possible WC/WDM interventions is essential so that potential measures may be assessed. A full WC/WDM strategy would normally include a wide range of interventions tailored to the specific problems identified in each area. The interventions would then be prioritised in such a manner that the maximum savings can be achieved for the minimum expense and the implementation would be scheduled accordingly. The challenges and interventions are discussed below.

### **3.3 INSTITUTIONAL REVIEW**

Based on the discussions, it became apparent that the WSAs were plagued by a magnitude of logistical and institutional factors which contribute to the varying state of water service delivery in the area. All the WSAs and WSPs are characterised by high vacancy rates, especially in their water services departments. There are also no clear service level agreements between the WSAs and WSPs and roles and responsibilities are not clearly defined.

Both the Vhembe and Mopani DM's are characterised by insufficient human capacity and skills to undertake all the technical work. Vhembe DM noted a particularly limited skills base in the WSA at both the management and operations and maintenance level. A primary matter of concern for the Mopani DM is the ageing skills base and the difficulty in training older staff. Mopani DM, however, has indicated that although the DM lacks the staff required for the work, the available human resources are correctly skilled.

Due to the budgetary and capacity constraints, no training on WC/WDM is taking place in any of the WSAs. Some training, however, has been provided in the Mopani DM for the process controllers. In recent years, the DWA has placed significant emphasis on improving the water quality in municipalities and funding has been provided for the proper training of municipal waste water treatment personnel. It is clear that the same level of commitment and drive is required to enforce and improve WC/WDM practices in municipalities.

Amongst the challenges common across the WSAs in the Limpopo region, is the availability of support structures to undertake the necessary system operations and maintenance work. Vhembe District attributed their challenge to lack of funding for the deficiencies, whilst Mopani DM pointed out that the primary challenge lies not with funding but rather inefficient expenditure of the available budget. Further contributing factors are the procurement processes which were mentioned to be slow and unresponsive. The problem of inadequate procurement processes was noted to be particularly prominent in Polokwane Municipality. Supply chain management however appears to be a pervasive challenge which must be addressed in order to improve the general state of infrastructure asset management.

At the WSA level, the relationship between the technical departments and the other departments (with specific reference to the department of finance) is positive with a reasonable flow of information between departments. Polokwane Municipality reported a very positive relationship between the departments and a working environment conducive to easy access to information. This, however, appears to not be the case at the WSP level.

All of the WSAs acknowledge the existence of political support for a variety of water related issues. They also stress, however, that training is urgently needed to improve the understanding of the water business and the municipal reforms that are required to improve cost recovery. All the WSAs are currently undergoing a bylaw review process. The Vhembe DM is developing water services bylaws which will be applied across all WSPs. It must be noted, however, that some of the WSPs have existing bylaws which were previously developed specific to the LMs which are being adopted. Further clarity is still required on how the new bylaws will be applied and whether stipulations will exist in terms of the blanket application of the bylaws at the WSP level. The WSAs have WSDP's in place which are updated on a continuous basis, but the accuracy of the data is very questionable and there is a serious lack of management information.

### **3.4 FINANCIAL REVIEW**

The municipalities within the region are faced with significant infrastructure maintenance backlogs which have not been addressed due to budget limitations which, to a large extent, are caused by poor cost recovery. The same challenges face the WSAs under investigation with the exception of Polokwane which has reported improved levels of cost recovery due to concerted efforts to enforce the credit control policy. The primary source of funding for Vhembe and Mopani is grant funding, with Vhembe DM stating unequivocally that without the external grant funding, the municipal service would come to a standstill. This places the WSAs in positions of significant vulnerability.

A further critical matter in this regard is the tariff reforms which are required to promote WC/WDM. Whilst all WSAs have rising block tariffs in place, the existing tariffs do not account fully for the cost of water services. One of the challenges facing the WSAs is the high indigent and rural populations, which compounds the difficulties faced in both the cost recovery and tariff setting due to the limited urban regions which can be metered and billed for consumption versus the affordability for the consumers. It was noted, however, that a starting point for the municipalities would be to ensure that all the commercial properties and industries are metered and billed fully for consumption and monitored on a continuous basis, to ensure that the consumers that can pay, do pay for services. Proper arrangements are also required for new low cost housing developments with services installed, which should also be billed for consumption. These areas, when not managed closely, lead to significant water losses owing to poor quality fittings and general misuse of water resources. In addition, the tariff setting process should ideally include both the finance and technical departments to ensure that all aspects of water services are taken into account - with the aim to continuously improve the cost reflectiveness of the tariffs, and to support the future sustainability of the WSAs.

The state of billing and metering within the WSAs is a matter of great contention. The metering and billing task is undertaken by the WSPs, however, the administration of funds and the lines of communication and access to information in this regard are reflective of the poor overall relationship between the WSAs and the WSPs. The matter is further complicated by the fact that within the WSPs themselves, it is common for a lack of communication between the technical and finance departments; notwithstanding the reporting that must be completed for the WSAs. Vhembe DM has, however, undertaken cost recovery programmes implemented by an external service provider within the LMs; which aids in improving the accuracy of meter reading and billing, as well as the access to billing information. An observation was that the service providers report to

the WSA, but do not share the information collected with the WSP. This has resulted, in certain cases, with the service providers having more detailed information on the operations of the municipality than the municipal personnel, which does not bode well for skills development and the improvement of management information at the WSP level. In Polokwane Municipality, however, the simpler structure allows greater access to information. The collection and collation of management information is, however, largely lacking.

### **3.5 SOCIAL REVIEW**

Numerous studies conducted over the years have identified the need for proper public engagement and participation in improving service delivery in municipalities. It is unfortunate that the relationship between the WSA and the consumers within the Luvuvhu-Letaba WMA is strained due to general dissatisfaction with the state of water services. The WSAs openly acknowledge that, due to the prevailing shortages in water resources in the area; which should have to a large extent been rectified by the commissioning of the Nandoni Dam, parts of the region are on intermittent supply. This unhappiness with the quality of service has generated negative perceptions of the WSAs amongst consumers which, to some extent, has also contributed to the prevailing poor cost recovery. It must however be noted that at the WSP level, positive relationships do exist, with specific reference to municipalities such as Tzaneen and Musina Local Municipalities, as well as Polokwane, where cost recovery and services have improved or have been maintained at an acceptable standard. Despite the multitude of challenges faced by the WSAs, no consumer engagement programmes are in place. Community awareness and education is habitually undertaken on an ad-hoc basis in cases of droughts or floods. This results in a consumer base that is ill-informed regarding water related issues and thus not cognisant of water conservation practices which would assist the WSAs in improving services in this region. Polokwane municipality has, however, made strides to implement community awareness. The programmes are not continuous, which has resulted in a consumer base which has not adequately internalised water conservation practices to alter behaviour. Likewise, the schools in the WMA are not regularly engaged on water matters and, as a significant identified avenue of water losses and thus of potential savings, a continuous education programme should ideally be implemented within this prime sector.

Currently, the WSAs have no structures in place to support consumers, with the exception of Polokwane Municipality which has a 24-hour customer care centre in place. There are no customer care centres available in the WSAs or WSPs to report leakage or submit water related queries. Such structures would be highly beneficial for the municipalities, particularly to aid passive leak detection and water loss monitoring through the communities. To address the magnitude of the challenges faced by the WSAs, the participation of both institutions and consumers or communities is crucial. Cost recovery and metering issues will not easily be addressed in the short-term. Consumer cooperation and support is therefore pertinent in this WMA.

### **3.6 TECHNICAL REVIEW**

As mentioned previously, one of the primary challenges in the region is the availability and quality of basic water management information. The Mopani District has few bulk meters in place at which system input volumes can be measured, with the exception of the more well established WSPs, specifically Tzaneen Municipality. Likewise, the Vhembe District and Polokwane Municipality are faced with the same short comings. One of the reasons for the limitations in management information is the rural nature of most of the local municipalities, where a substantial component of the population utilises boreholes as the main source of water. The Vhembe District did, however, indicate that the water quality in a number of the main boreholes is monitored, as well as the yield thereof. It was also noted during the interview process that once the responsibility transfer process between the WSAs and WSPs has been concluded, bulk meters will be installed in the various local municipalities to improve the availability of the management information.

The installation of bulk meters is also planned for Polokwane Municipality in the near future. In line with the limitations in macro management information, the micro management structures in the form of sectorisation and zone metering are also largely absent, with the exception of Greater Tzaneen, Ba-Phalaborwa and Greater Letaba municipalities in the Mopani District. Basic, proactive infrastructure asset maintenance is also lacking in all the WSAs. There are significant infrastructure replacement backlogs in all instances, with no replacement programme in place to improve the situation. The water supply networks in the region are primarily asbestos cement, with significant pipe bursts in certain areas, particularly in the Mopani District, due to the age of the infrastructure. The water in the region is generally supplied at very low pressures, mainly because of the water shortages in the area, with very few instances of reservoir overflows also attributed to the limitations in the amount of the water resources available. There is thus limited scope existing for the implementation of pressure management in the region at this stage, with very few selected areas that would benefit from such interventions, such as Giyani and Tzaneen in Mopani District as mentioned by the WSA.

Numerous studies have noted the contribution of internal plumbing leakage as a significant component of water losses. The Vhembe District noted leakage on private properties as a significant problem in the WSA, which is not being addressed through the existing or current programmes. The Mopani District, contrarily, does not perceive experiencing a similar challenge however, this is not certain as no audits have been conducted in the WSA to establish the extent or occurrence of this problem. Whilst the general trend is that municipalities do not operate or repair leakage on private properties, huge benefit can be derived from undertaking such interventions; particularly in municipalities where cost recovery and payment for services is very poor as is the case with the aforementioned WSAs.

It is encouraging that despite the absence of an infrastructure replacement programme, some meter replacement programmes have taken place in the Vhembe District and the top consumers are monitored on a monthly basis. It is clear, however, from the discussions that despite the minimal population from which the costs of water services can be recovered, this is not undertaken to the fullest extent by both WSAs. Vhembe District indicates that approximately 60% of the non-domestic consumers in the WSA are billed and metered and 70% of the domestic consumers are metered and billed - which is surprising as the metering of the domestic consumers exceeds that of the non-domestic consumers from which a substantial portion of the costs can legitimately be

recovered. It is thus crucial that the non-domestic sector be investigated and audited in all WSAs to ensure that all industries and businesses are properly metered and billed to generate income for the municipalities.

A further significant challenge faced by the WSAs is that of illegal connections which have been noted to be widely prevalent in the rural segments of the region. This is mainly due to the community's dissatisfaction with the level of service provided in these areas. The high prevalence of illegal connections suggests that the apparent losses in these WSAs is significantly higher than the assumed estimates which are applied to water balance calculations in instances where the management information is lacking. As it has already been identified as a significant water loss contributor in this region, this component of the water losses warrants more detailed investigation.

The WSAs under investigation made mention of existing asset registers which include the bulk water infrastructure present. The asset registers, however, were noted to be primarily of a financial nature with limited detail on the life span and replacement details of the infrastructure. Mopani District noted the asset register for the WSA is currently under review in order to rectify, or compensate for, the existing limitations, whilst the outstanding infrastructure, which belonged to the Department of Water Affairs, will be captured in the asset register for Vhembe once the transfer of responsibilities between the WSAs and the WSPs have been completed.

Having expounded on the status quo of the WSAs in the region, it must be noted that the challenges at the local municipality level are largely similar across the board. The most outstanding trends observed throughout the local municipalities, or WSPs, are the glaring lack of management information (through deficient monitoring, recording and reporting and measurement structures). Furthermore, the dissension between the WSPs and the responsible WSAs causes substantial barriers in the access to management information, as well as to how this information is communicated, coordinated and understood. Generally, proactive asset management and maintenance appears largely absent which has significantly compromised the quality of water service provision in the WMA, with the bulk infrastructure in substantial disrepair. As mentioned previously, there is limited bulk and zone metering which allows for very limited macro and micro management of the water resources.

### **3.7 REGULATORY PERFORMANCE MEASUREMENT SYSTEM**

The Department of Water Affairs measures and monitors the overall performance of water services authorities through the Regulatory Performance Measurement System (RPMS). The RPMS is a tool to assist the DWA consistently, transparently, and objectively measure performance in the sector.

KPIs 7 to 11 have a direct impact on WC/WDM and therefore analysed as part of this study. KPI 8 – Institutional Effectiveness and KPI 9 – Financial Performance are critical to implement effective WC/WDM and must be addressed as a matter of priority. KPI 11 highlights the lack of information with regards to management information. The results from the 2011/12 RPMS are summarised in **Table 3.4** and **Table 3.5**.

**Table 3.4 Mopani DM RPMS Results**

| Key Performance Indicators               | Achieved KPI Score | Required score | Performance assessment |
|--|--------------------|----------------|------------------------|
| KPI 1: Access to water supply            | 3.165              | 3              | Adequate               |
| KPI 2: Access to sanitation              | 3.125              | 3              | Adequate               |
| KPI 3: Access to Free Basic Water        | 2.689              | 3              | Concern                |
| KPI 4: Access to Free Basic Sanitation   | 0                  | 3              | Crisis                 |
| KPI 5: Drinking Water Quality management | 0                  | 3              | Crisis                 |
| KPI 6: Wastewater quality management     | 2                  | 3              | Concern                |
| KPI 7: Customer service quality          | 1.75               | 3              | Concern                |
| KPI 8: Institutional effectiveness       | 3.343              | 3.5            | Concern                |
| KPI 9: Financial performance             | 2.929              | 4              | Concern                |
| KPI 10: Strategic asset management       | 4.534              | 3              | Excellent              |
| KPI 11: Water use efficiency             | No data            | 3              | No data                |

**Table 3.5 Vhembe DM RPMS Results**

| Key Performance Indicators               | Achieved KPI Score | Required score | Performance assessment |
|--|--------------------|----------------|------------------------|
| KPI 1: Access to water supply            | 1.87               | 3              | Concern                |
| KPI 2: Access to sanitation              | 3.113              | 3              | Adequate               |
| KPI 3: Access to Free Basic Water        | 5                  | 3              | Excellent              |
| KPI 4: Access to Free Basic Sanitation   | 0                  | 3              | Crisis                 |
| KPI 5: Drinking Water Quality management | 1                  | 3              | Crisis                 |
| KPI 6: Wastewater quality management     | 0                  | 3              | Crisis                 |
| KPI 7: Customer service quality          | 3.5                | 3              | Good                   |
| KPI 8: Institutional effectiveness       | 3.276              | 3.5            | Concern                |
| KPI 9: Financial performance             | 0.571              | 4              | Crisis                 |
| KPI 10: Strategic asset management       | 3.375              | 3              | Good                   |
| KPI 11: Water use efficiency             | 0                  | 3              | Crisis                 |

The results from the RPMS confirms the problems the municipality is facing in terms of institutional, customer care, finances, asset management and water loss management.

### 3.8 BLUE DROP ASSESSMENTS

Ensuring efficient and continuous supply to an area is a prerequisite for implementing effective WC/WDM. WC/WDM cannot be promoted and implemented in areas characterised by intermittent supply and poor level of service.

The Blue Drop assessment process is an effort by the Department to raise the drinking water quality and reliability of supply to all consumers. The incentive-based regulatory approach acts as a positive stimulus to facilitate improved performance and public accountability, whilst establishing essential systems and processes to sustain and measure gradual improvement. The results from

the Blue Drop assessment is an indication of the efficiency and sustainable supply to an area which impacts directly on WC/WDM.

The regulatory impression of Mopani DM is quoted as follows *“The DWA Inspectors identified lack of municipal management support as a reason of concern which could delay future improvements in the drinking water quality management performance of the Mopani District Municipality. While the municipality provided information that allowed a better assessment of performance in most of the supply systems managed solely by Mopani, a number of systems were still found not-assessed. Water to residents in the Nondweni, Nkambako, Thapane Semarela, Giyani, Mapuve and Middle Letaba water supply areas were found of a microbiological quality not compliant with the requirements of SANS 241 (South African National Standard for Drinking Water). The performance of Mopani was measured at higher scores in systems where the WSA received assistance from Tzaneen Local Municipality and Northern Lepelle Water”.*

The regulatory impression of Vhembe DM is quoted as follows *“The 2012 Blue Drop scores for Vhembe District Municipality indicates the significant achievement of improvement in performance for every water supply system within the water services authority’s area of jurisdiction. This momentous accomplishment warrants celebration of the dedication of those responsible for drinking water quality operations and management within this municipality”.*

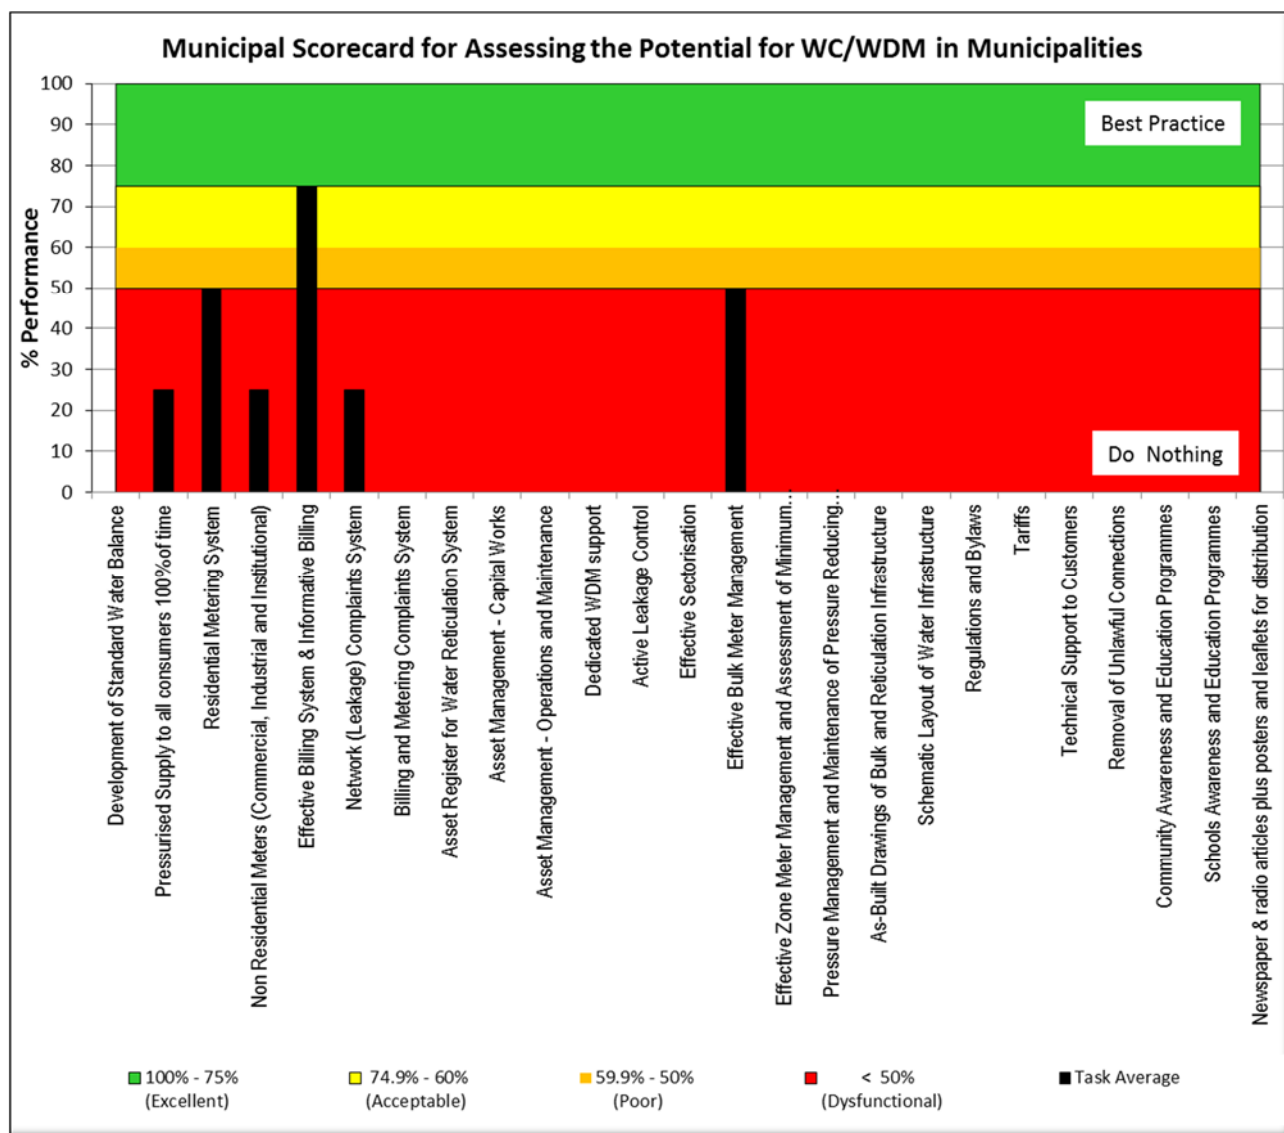

### **3.9 WCWDM QUANTITATIVE SCORECARD**

The WC/WDM quantitative scorecard provides an indication of the WC/WDM activities the municipalities are undertaking against international best practice. The purpose of the scorecard is for municipalities to evaluate themselves on an annual basis and attempt to improve their score.

The results for Mopani and Vhembe are shown in **Figure 3.3** and **Figure 3.4** respectively.

**Figure 3.3 Mopani Quantitative Scorecard**

**Figure 3.4 Vhembe Quantitative Scorecard**

The results from the quantitative scorecard confirms that WC/WDM is not sufficiently addressed by the municipalities and performing these basic tasks will make a significant improvement.

### 3.10 FINANCIAL STATEMENT ASSESSMENT

Key results from the 2011/12 financial statement for Mopani DM and Vhembe DM are summarised in **Table 3.6** and **Table 3.7** respectively.

The results from both municipalities indicate the huge challenges faced by the municipalities with regards to cost recovery which will enable asset management, filling of vacancies and water loss management.

**Table 3.6: Mopani DM Summary of Financial Statement**

| Revenue / Expenditure                         | 2011 / 2012          | 2010 / 2011          |
|---|----------------------|----------------------|
| Income from water sales                       | R 136 210 424        | R 123 104 771        |
| Bulk water purchases                          | R 96 758 375         | R 72 545 334         |
| Estimated volume water sold                   | 35 483 518           |                      |
| Estimated average R/kl sold                   | R 3.84               |                      |
| <b>Debtors</b>                                | <b>2011 / 2012</b>   | <b>2010 / 2011</b>   |
| Current (0 -30 days)                          | R 12 954 594         | R 3 062 512          |
| 31 - 60 days                                  | R 13 019 031         | R 2 081 367          |
| 61 - 90 days                                  | R 8 233 129          | R 1 864 156          |
| 91 - 120 days                                 | R 6 246 847          | R 112 887 977        |
| 121 - 365 days                                | R 53 969 176         | R 126 233 537        |
| > 365 days                                    | R 141 388 960        | -                    |
| <b>Total</b>                                  | <b>R 235 811 737</b> | <b>R 246 129 549</b> |
| <b>Financial performance of water segment</b> | <b>2011 / 2012</b>   | <b>2010 / 2011</b>   |
| Actual Income                                 | R 0                  | R 0                  |
| Actual Expenditure                            | R 420 294 677        | R 232 857 818        |
| Surplus / (Deficit)                           | (420 294 677)        | (232 857 818)        |
| <b>Asset value (excluding depreciation)</b>   | <b>2011 / 2012</b>   | <b>2010 / 2011</b>   |
| Water reservoirs & reticulation               | R 1 853 915 127      | R 1 742 182 523      |

The status of water supply services is described as follows in the financial statements:

*“Water still remains a challenge within the district given the ageing infrastructure, huge number of illegal connections and new unplanned residential sites particularly in the rural communities”.*

*“The position of Director Water Services was filled in July 2012 while the position of Director Corporate Services became vacant as from August 2012. The total approved posts is 1 564 which includes the staff transferred from the Department of Water Affairs. Only 886 posts have been filled with 730 vacant which also include retirements within the water directorate and the municipality is currently working around the clock to fill all the budgeted positions”.*

**Table 3.7: Vhembe DM Summary of Financial Statement**

| Revenue / Expenditure | 2011 / 2012        | 2010 / 2011        |
|-----------------------|--------------------|--------------------|
| Musina                | 21 445 350         | 23 493 508         |
| Thulamela             | 26 513 595         | 25 517 503         |
| Makhado               | 21 051 139         | 18 454 400         |
| Mutale                | 3 421 362          | 3 072 646          |
| Total water sales     | 72 431 446         | 70 538 059         |
| <b>Debtors</b>        | <b>2011 / 2012</b> | <b>2010 / 2011</b> |
| Thulamela             | 73 332 292         | 74 586 847         |
| Makhado               | 23 643 590         | 26 353 635         |

| Total   | 63 366 686         | 45 963 555         |
| <b>Financial performance of water segment</b> | <b>2011 / 2012</b> | <b>2010 / 2011</b> |
| Actual Income                                 | 932 036 790        | 794 322 640        |
| Actual Expenditure                            | 644 249 378        | 734 966 101        |
| Surplus / (Deficit)                           | 287 787 412        | 59 356 539         |
| <b>Asset value (excluding depreciation)</b>   | <b>2011 / 2012</b> | <b>2010 / 2011</b> |
| Water reservoirs & reticulation               | 1 354 284 328      | 1 700 826 990      |

The status of water supply services is described as follows in the financial statements:

*“Service charges relating to water are based on consumption. Meters are read on a quarterly basis and are recognised as revenue when invoiced. Provisional estimates of consumption are made monthly when meter readings have not been performed. The provisional estimates of consumption are recognised as revenue when invoiced. Adjustments to provisional estimates of consumption are made in the invoicing period in which meters have been read. These adjustments are recognised as revenue in the invoicing period. Revenue from the sale of water prepaid meter cards is recognised at the point of sale”.*

*“During the current financial year the municipality incurred average distribution losses of 18 071 278 m<sup>3</sup> due to the water leakages”.*

## **4 STRATEGIES**

### **4.1 INSTITUTIONAL STRATEGY**

From an institutional standpoint, the key intervention in the WSAs within the Luvuvhu-Letaba WMA will be to address the considerable vacancies or shortages in human resources and skills. Ideally, dedicated individuals or sections should be established in order to drive Water Conservation and Demand Management. Specialised training in WC/WDM is pertinent to support the municipal personnel in undertaking the required water loss reduction activities, particularly at the management level where guidance and leadership is required to drive demand management. It is also crucial that the lines of communication are opened between the different municipal departments in order to aid more efficient access to information which will allow for more effective and coordinated planning. In this regard, an NRW steering committee comprising of the relevant councillors, finance representatives, communication and the technical department may be established to facilitate improved reporting and management of NRW. Procurement processes during and after the transition period must also be streamlined in order to enable swifter access to support structures required for operations and maintenance tasks, which are necessary to mitigate water losses in the systems. Political support cannot be divorced from any of the abovementioned strategic matters, as it is essential for the acceptance, adoption and implementation of all the key NRW reduction initiatives.

### **4.2 SOCIAL STRATEGY**

One of the key findings of the assessments undertaken was the pervasive poor relationships existing between the WSAs and the consumers. The assessment also revealed that very little was being done to engage the consumers on water issues and to gain their cooperation whilst the WSAs tackle the pertinent water challenges within the WMA. As mentioned previously, the consumer behaviour and adaptation to increasing water scarcity is crucial, not only in water loss reduction initiatives, but also the mitigation of further scarcity in the WMA. Extensive and continuous consumer water education programmes are required which will focus on the community and other key water users, including agricultural users and institutions such as schools which are potent avenues for the reduction of water losses. The installation of water efficient devices, as well as rain water harvesting; are also avenues which can further be explored for promotion and implementation in different sectors. These water efficient devices may also aid water loss reduction at the consumer level, particularly in areas where metering and billing cannot immediately be effected, and where cost recovery is very low due to high indigent populations. Structures should be put in place to support consumers in reporting leakage and other service related complaints. This information should be captured electronically in order to allow proper tracking and analysis of water loss contributors and significant problem areas. The political leadership should lead these interventions and provide substantial support in order to improve the sustainability of the community based interventions.

### **4.3 FINANCIAL STRATEGY**

It is widely accepted that one of the key reforms required in the municipal sector is financial reform. Such reform includes the overhaul of metering and billing systems to improve the state of internal

revenue, as well as tariff setting process and outcomes that not only promote water loss and demand reduction in line with the presidential targets; but also take into account the cost of water services. One of the findings of the financial review conducted, particularly in the Vhembe DM, was the lack of a proper methodology in the tariff setting process. In the absence of the application of guidelines to the process, the tariffs do not promote demand management or reflect the cost of water services. This ideal is not easy to achieve in light of the indigent levels in the municipalities under investigation. Where practicable, however, metering and billing must be effected, particularly in the non-domestic sector. As a first step, meter audits should be undertaken in this consumer sector in order to identify unmetered connections and non-functional meters which could, in the short term, significantly improve cost recovery. Furthermore, it is imperative that the tariff setting process includes inputs from the technical departments which could assist in making the tariffs increasingly effective in achieving the water use efficiency objectives.

National Treasury has been very vocal on the dependency of municipalities on grant funding and has emphatically expressed the need for municipalities to actively demonstrate a commitment to proper budgeting, planning and cost recovery, with a focus on demand side management as a first step in managing and more effectively utilising the available resources. The aforementioned require closer monitoring of consumers, particularly the top consumers, an effective system to capture and refer billing related complaints and progressive payment of services in the municipalities, which must be supported and preceded by proper community awareness and education, and wide spread public engagement.

#### **4.4 TECHNICAL STRATEGY**

The assessment conducted revealed two primary issues of water scarcity in the WMA. The first is the challenge of the water resource itself which must be rectified through additional resources. The second, however, relates to scarcity from the perspective of access to water resources which must be addressed at the WSA level. One of the primary challenges, as mentioned previously, is the availability of management information which must be rectified as a matter of priority. Measurement of the system input volumes as a first step is required to evaluate the extent of water losses in the WMA, particularly in the Mopani District, Vhembe District and Polokwane municipalities. Sectorisation and zone metering and monitoring is also required in the majority of the municipalities in the WMA to aid in the micro management of the system once bulk metering has taken place. It is an observed trend that in municipalities where management information structures are in place, the data obtained from the devices is not utilised. The data is neither captured or analysed in any meaningful way which would aid in generating the required management reports with the NRW KPI's included. The installation of meters is thus only the first step and will be altogether useless if the information is not captured and monitored on a monthly basis.

Proper budgets must also be set aside for proactive infrastructure asset maintenance. There is a substantial maintenance backlog in the municipalities in the WMA, with a significant number of access challenges being caused merely by the age of the existing infrastructure. Simply replacing the network will, however, not resolve all the challenges which will require greater community participation and cooperation to achieve. Passive leak detection through community reporting will greatly enhance the ability of the WSPs to monitor the network and explore potential for pressure

management in selected areas experiencing high pipe burst frequencies. The location of infrastructure also needs to be clarified in order to identify aspects of the network which are in a state that compromises the ability to provide services to the consumers. In this regard, there is a need to develop digital as-built drawings of the network which must be accompanied by the development of a comprehensive asset register. This register must incorporate critical information such as the age of the infrastructure, replacement period and cost, as well as the location of the assets. Through such interventions, substantial community based employment can be created, where indigent residents may be appointed and utilised to clean and locate the infrastructure.

## 5 WC/WDM PROJECTIONS

### 5.1 WATER SUPPLY AND DEMAND BALANCE DIAGRAM FOR VHEMBE DM

The potential impact of WCWDM on the future water requirements of Vhembe DM and its target water balance are shown in **Figure 5.1** and **Figure 5.2**.

**Figure 5.1: Vhembe DM Projections**

From the graph it can be seen that overall Vhembe DM will probably not experience any deficit in the next five years but the supply is unequal and some areas already experiences deficits. Water demand management interventions must therefore be implemented as a matter of priority.

**Figure 5.2: Vhembe DM Target Water Balance Diagram (million m³/a)**

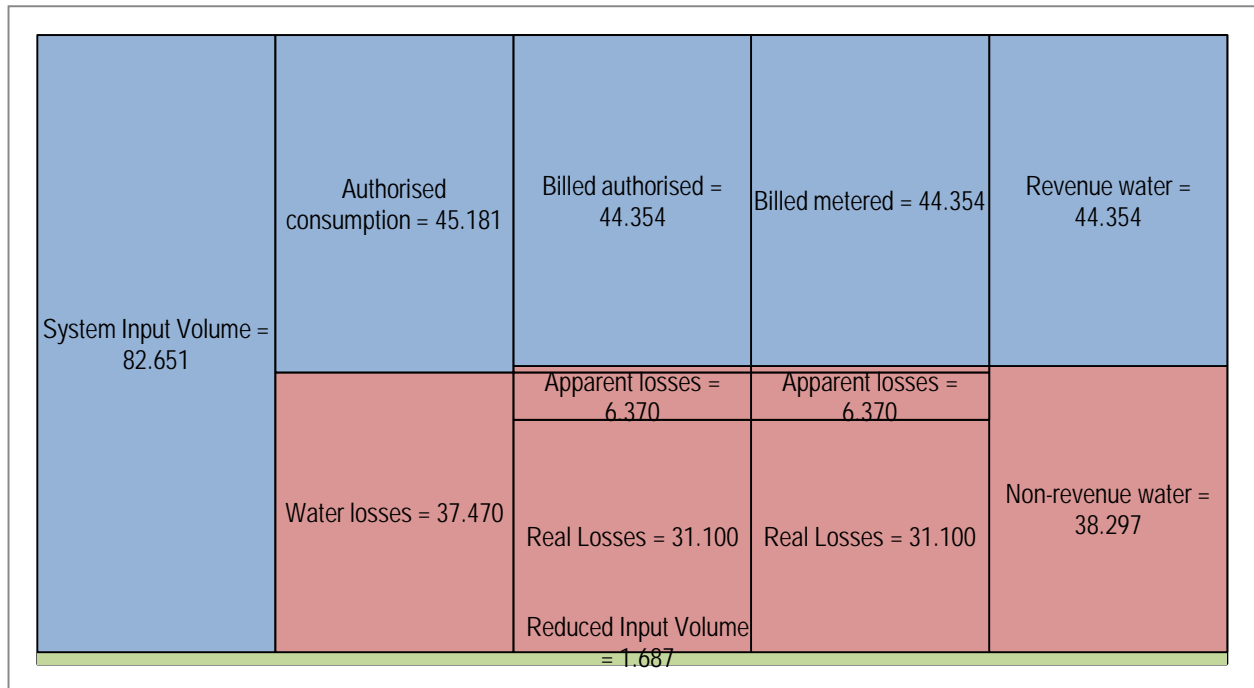

## 5.2 WATER SUPPLY AND DEMAND BALANCE DIAGRAM FOR MOPANI DM

The potential impact of WCWDM on the future water requirements of Mopani DM and its target water balance are shown in **Figure 5.3** and **Figure 5.4**.

**Figure 5.3: Mopani DM Projections**

From the graph it can therefore be seen that Mopani DM will most experience water deficits in the near future and WC/WDM must be implemented.

**Figure 5.4: Mopani DM target water balance diagram (million m<sup>3</sup>/a)**

## **7 CONCLUSIONS**

Results from the study are summarised as follows:

- There is a large part of the study area which has formal infrastructure which enables effective metering and billing;
- The average consumption in the urban areas is very high and there is scope for reduction, which is expected to reduce the total demand and non-revenue water;
- The rural areas are characterised by intermittent supply with limited cost recovery and consumers revert to illegal connections to obtain water;
- The average consumption in the rural areas is within the acceptable range but there is huge inequality of supply. Any reduction will be redistributed with limited or no reduction in the total demand;
- The water tariffs in certain areas are not cost reflective and do not promote water conservation and water demand management;
- The municipalities lack funding to implement WC/WDM;
- The municipalities require additional staff to address and implement WC/WDM;
- Asset management lacks in some of the areas, which impacts on the assurance of supply; and
- Municipalities are grant dependant and have very high debtors.

Based on the above the following key strategic focus areas are recommended :

- Raise WC/WDM awareness within the organisation by setting-up a WC/WDM task team, chaired by senior officials or MMC to meet on monthly basis to address WC/WDM issues;
- Fill vacant positions and provide training and capacity building;
- Improve metering, reading, billing and cost recovery;
- Review the water tariff structure to be most cost reflective and promote WC/WDM;
- Improved tariff structures and cost recovery will increase revenue for the municipality which can be used to address the backlog in maintenance and improve service delivery;
- Implementing metering and cost recovery in the rural areas present several challenges and fixing internal plumbing leakage using local plumbers is recommended until the systems have stabilised and service delivery has improved;
- Implement awareness campaigns across all consumers to use water efficiently; and
- Improve management information through proper monthly reporting and records keeping. These reports should be discussed at the monthly EXCO meetings.

| Settlements  | Bandelierkop, Elim, Ha-Mogoro, Levubu, Makhado (Louis Trichardt), Mara, Oorwinning, Ratombo, Sending, |                 |            |                         |                |                        |
|  |   |                 |            |                         |                |                        |
| Executive summary  |   |                 |            |                         |                |                        |
| Status quo   |   |                 |            |                         |                |                        |
| <p>Very limited WC/WDM activities are undertaken in the LM and there is little management information available to perform a proper assessment of the water losses and potential savings. This assessment is in line with the RPMS, Blue Drop assessments, IDP and WSDP. Most of the towns are informal with formal infrastructure in a relatively smaller area within the LM which enables limited metering, billing and cost recovery in the LM. The current metering, billing and cost recovery systems are inadequate. The engineering department in the Local Municipality is characterised by high vacancies at the operational level however the skills base is adequate.</p> <p>The current estimated unit consumption of <b>129l/c/d</b> is low and no significant reduction is anticipated but a more detailed analysis is required to verify this number. It seems there has been a drastic decrease in the average unit consumption in the area. The relationship with the community is generally contentious and the communities themselves are characterised by a relatively low indigent population. The consumers are not cognisant of water conservation practices.</p> |   |                 |            |                         |                |                        |
| Strategy   |   |                 |            |                         |                |                        |
| <p>The municipality should focus on proper record keeping, analysis and development of detailed management information. All vacancies must be filled as a matter of priority together with skills transfer and capacity building. The engineering and finance department must work closer together at the LM and DM level to improve metering, billing and cost recovery and start with a meter audit to further improve cost recovery. A steering committee should be setup to report on a monthly basis to council on water loss figures, leaks repaired, targets, progress, consumer metering, billing and cost recovery.</p> <p>Proper metering, billing and cost recovery should be supported by community awareness that promotes reporting of leaks, fixing of private leaks and efficient use. Based on the available information, a target reduction in NRW of <b>96.6% down to 63.7%</b> and target input volume reduction of <b>32.9%</b> have been set. Review the water tariff structure to ensure it reflects true cost, promote WCWDM and work towards compliance with RPMS and improve IDP.</p>  |   |                 |            |                         |                |                        |
| Business Plan  |   |                 |            |                         |                |                        |
| The budget requirements for the next five years are summarised in the table below:   |   |                 |            |                         |                |                        |

## WCWDM STRATEGY : Qualitative Scorecard

**Municipality Name** | Makhado

### Introduction

The purpose of this section is to perform a qualitative evaluation of the municipality's water business. The objectives are as follows :

| SWOT Analysis  | External - Opportunities<br>Positive external conditions which you don't control which you could take advantage of | External - Threats<br>Negative conditions you don't control but could minimise their effects |
|--|--|--|
| Internal - Strengths<br>Positive aspects under your control and on which you may wish to capitalise              | Strengths and Opportunities (SO) –<br>Strategies that use strengths to maximize opportunities.                     | Strengths and Threats (ST) –<br>Strategies that use strengths to minimize threats.           |
| Internal - Weaknesses<br>Negative aspects under your control (to a large extent) which you could plan to improve | Weaknesses and Opportunities (WO) –<br>Strategies that minimize weaknesses by taking advantage of opportunities.   | Weaknesses and Threats (WT) –<br>Strategies that minimize weaknesses and avoid threats.      |

| ITEM     | CATEGORY   | STATUS QUO   | SWOT | STRATEGY  | PRIORITY<br>(1) High |
|----------|--|--|------|---|----------------------|
| <b>1</b> | <b>INSTITUTIONAL REVIEW</b>  |  |      |   |                      |
| 1.1      | Water and Sanitation department structure  |  |      |   |                      |
| 1.1.1    | Is there an approved organogram for the Water and Sanitation Department?         | Yes. The water function has however been removed because it is now a district function.  | O    | Review the existing organogram and ensure that it incorporates WC/WDM personnel in consultation with the District.  | 1                    |
| 1.1.2    | What is the vacancy rate in the department and is it a problem?                  | There is 20% vacancy rate. The Water and Sanitation manager post is vacant. No provisions could be made for additional operations staff due to the uncertainty regarding the functions of the District and Local Municipality. | T    | Engage with the District and advertise and fill the identified critical vacant posts. Engage with the Department of finance at the District Level to identify and explore possible funding options and budget requirements for the critical posts.                          | 1                    |
| 1.1.3    | Does the department have the correct technical skills for the correct posts.     | The department is fully and correctly skilled at the managerial level but operational staff is sorely needed.  | T    | Increase management, and O&M capacity through new human resources and support it with WC/WDM training.  | 1                    |
| 1.1.4    | Is training and capacity building being done?                                    | There is some training taking place related to financial management and safety.  | O    | Institute a mandatory WC/WDM training programme for technical staff. Invest in team building and workshop sessions incorporating the councillors and municipal management to boost staff morale.  | 2                    |
| 1.1.5    | Are there sufficient support structures ito vehicles, equipment, materials etc.? | There is not enough vehicles and equipment due to funding limitations.   | T    | Engage with the Department of Finance at the District level and allocate an adequate budget for the critical spares. Allocate a specific person who will be responsible for expediting equipment orders and managing quality control in terms of the procurement processes. | 1                    |

| ITEM  | CATEGORY  | STATUS QUO  | SWOT | STRATEGY  | PRIORITY<br>(1) High |
|-------|---|---|------|---|----------------------|
| 1.1.6 | Does the municipality own any water loss control equipment such as loggers, listening sticks, etc.? | There is no water loss equipment.   | O    | It is recommended that loggers and simple leak detection equipment be purchased to improve water loss monitoring and management in the system.  | 3                    |
| 1.2   | <b>Municipal support</b>  |   |      |   |                      |
| 1.2.1 | Describe the working relationship with other departments such finance, planning, housing etc.?      | There is a reasonable working relationship with department of finance but exception reports are not received by the technical department. | O    | Establish a NRW steering committee comprising representatives from the technical, communications and finance departments to improve communication and access to information.  | 1                    |
| 1.2.2 | Are the politicians supporting the department?  | The politicians especially the portfolio head is very supportive but training is required.  | O    | Undertake a councillor WC/WDM induction programme to capitalise on the existing relationship and build a communication bridge between the municipality and the customers.   | 2                    |
| 1.3   | <b>Public Private Partnerships</b>  |   |      |   |                      |
| 1.3.1 | Is there any major industrial or institutional role player in the area and is there co-operation?   | There are a few possible mines which may come into the area but there is no existing potential currently.                                 |      |   |                      |
| 1.3.2 | If yes, what does the co-operation involve and can it be expanded?                                  |   |      |   |                      |
| 1.4   | <b>Legislation and bylaws</b>   |   |      |   |                      |
| 1.4.1 | Does the municipality have a customer service charter?  | No.   | O    | Develop a customer service charter to ensure the customers are aware of the municipality's commitment and their responsibilities as consumers.  | 3                    |
| 1.4.2 | What is the status and age of the existing bylaws and do they address water loss management?        | There are bylaws in place for Makahdo. The bylaws are currently under review.   | O    | Utilise the bylaw review process to ensure that WC/WDM issues are captured and addressed by the new by laws being developed.  | 2                    |
| 1.4.3 | Are bylaws enforced and if not, why not?  | The bylaws are enforced particularly in town.   | S    | Continue to enforce the bylaws particularly for the large commercial consumers to ensure effective cost recovery.   | 1                    |
| 1.4.4 | What is the status and age of Water Services Development Plan?                                      |   |      |   |                      |
| 2     | <b>FINANCIAL REVIEW</b>   |   |      |   |                      |
| 2.1   | <b>Financial Department</b>   |   |      |   |                      |
| 2.1.1 | What is your opinion of the Finance Department's ability to perform metering and billing            | A service provider was appointed to perform this duty for the past 3 years but a new one will be appointed in the near future.            | O    | Improve communication and access to information between the technical and finance department through scheduled monthly team meetings in order to fully utilise this resource. Include the service provider in these meetings and stipulate that they present management reports on a monthly basis. | 1                    |
| 2.1.2 | Is training and capacity building being done?   |   |      |   |                      |
| 2.1.3 | What is the state of the municipal metering and billing system?                                     |   |      |   |                      |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY   | PRIORITY<br>(1) High |
|-------|---|--|------|--|----------------------|
| 2.1.4 | What is your primary source of funding?   | The equitable share and internal revenue, rates and taxes.   | O    | Focus on improving cost recovery to continuously reduce dependency on grant funding.   | 2                    |
| 2.2   | <b>Tariffs</b>  |  |      |  |                      |
| 2.2.1 | Who prepares the water tariffs and what is it based on?                             | Department of Finance prepares the tariffs. The technical department does not make inputs but the National Treasury guidelines are applied.  | T    | Ensure that the technical department makes inputs into the tariff setting process to ensure that the tariffs are feasible for the municipality and the consumers. Institute a rising block tariff sufficiently differentiated in cost at each level to promote WC/WDM with the highest tariff at least double the lowest tariff. | 1                    |
| 2.2.2 | What is the tariff structure and does it promote WCWDM?                             |  |      |  |                      |
| 2.2.3 | Is the water supplied considered affordable by the customers?                       | The consumers feel the water is affordable.  | S    | Continue ensuring that the tariffs remain affordable particularly for the efficient and low income water users.  | 1                    |
| 2.3   | <b>Meter Reading and Billing</b>  |  |      |  |                      |
| 2.3.1 | Who performs the water meter readings, frequency and accuracy?                      | There is an external service provider who does this on a monthly basis. The accuracy of the meter readings is questionable (frequent complaints from consumers).   | T    | Continue to monitor the frequency of meter reading and customer complaints of inaccurate billing to determine the effectiveness of the existing meter reading contractor. Stipulate the provision of proper training for the meter readers to improve the accuracy or alternatively replace the meter reading contractor.        | 1                    |
| 2.3.2 | Are the meter readers trained and can they report leakage when encountered on site? |  |      |  |                      |
| 2.3.3 | Is the water bill understandable and informative?                                   | The bill is comprehensible but it can still be improved.   | O    | Consider including water conservation tips and information in the water bill. It is also recommended to display 6 months graphical consumption data on the bill to aid consumers in effectively monitoring water use.  | 3                    |
| 2.4   | <b>Credit control</b>   |  |      |  |                      |
| 2.4.1 | Is credit control being implemented and by whom?                                    |  |      |  |                      |
| 2.4.2 | What is the current level of non-payment?   | Non payment levels are high. Availability of the data to the municipalities is lacking, people are unwilling to pay for water and are saying that the level of service is unacceptable. The consumers are on intermittent supply. The Eastern part of Makhado is restricted to getting water at certain times. | O    | Focus on promoting payment for services in the township areas through the councillors and education and awareness. Improve the quality of service through obtaining proper management information and monitoring the zones on a monthly basis.   | 1                    |
| 3     | <b>SOCIAL REVIEW</b>  |  |      |  |                      |
| 3.1   | <b>Customer profile</b>   |  |      |  |                      |

| ITEM  | CATEGORY  | STATUS QUO  | SWOT | STRATEGY   | PRIORITY<br>(1) High |
|-------|---|---|------|--|----------------------|
| 3.1.1 | Describe the general consumer profile i.e. Income levels, indigence, unemployment, literacy           | Indigence levels are not necessarily high in the municipality. The challenge is the availability of billing information which was not captured when the old Venda government ceased to exist. | O    | Focus on educating the indigent population on efficient water use and the importance of the free basic allocation as well as its limitations.  | 1                    |
| 3.1.2 | Describe the relationship between customers and the municipality and reasons?                         | The relationship between the municipality and the community varies between areas. Significant tension does exist in certain areas due to unhappiness with service.                            | T    | Engage with the consumers through the councillors and gain their support and cooperation whilst the municipality resolves the water services challenges. Build on the relationship with all the consumers and strengthen it through community awareness campaigns. | 1                    |
| 3.2   | <b>Customer awareness</b>   |   |      |  |                      |
| 3.2.1 | Are consumers informed regarding the value of water?  | The consumers are not very well informed regarding the value of water.  | T    | Budget and undertake a continuous annual education and awareness campaign focusing on promoting water use efficiency.  | 2                    |
| 3.2.2 | What is the level of leakage reporting by the community and what method do they use?                  | The levels of leakage reporting are high in the town area.  | O    | Ensure that the customer care line is continuously publicised to further encourage reporting of leakage.   | 3                    |
| 3.2.3 | What are the most prominent consumer behavioural challenges encountered by the municipality?          | The rate of vandalism particularly at the pump stations and boreholes is high.  | T    | The community awareness campaign should be tailored to address these problems. The councillors should be encouraged to make these issues an agenda at all public metering held in the different wards.   | 2                    |
| 3.2.4 | Is xeriscaped gardening and rain water harvesting encouraged?   | Rain water harvesting is currently not publicly promoted however it is taking place in the rural areas.   | O    | As part of a community awareness campaign, encourage consumers to harvest rain water and utilise it for garden irrigation and cleaning to reduce the demand for potable water.   | 2                    |
| 3.2.5 | Are radio campaigns, bill board, pamphlets, informative billing used to inform and educate customers? | Local news paper publications are produced on average twice a year specifically addressing water restrictions.  | O    | Develop simple visual material in the form of pamphlets which can be used to educate consumers on efficient water use. Build on the media campaign undertaken and periodically publicise water tips on local radio stations and newspapers.                        | 2                    |
| 3.3   | <b>Schools awareness</b>  |   |      |  |                      |
| 3.3.1 | Number of primary and secondary schools?  |   |      |  |                      |
| 3.3.2 | Frequency and scope of schools awareness campaigns?   | The Community Services Department does this on a quarterly basis.   | O    | Huge benefit can be derived from the expansion of the schools programme. The section 21 schools in particular should be visited, monitored and encouraged to fix leakage as the O&M budgets are operated by the school management for this category of schools.    | 3                    |
| 3.3.3 | Are goals and objectives monitored and controlled?  | No. Most of the schools in the rural areas were encouraged to have water tankers and the water is billed.   | O    | Establish a relationship with schools. Monitor their consumption and undertake education and awareness.  | 3                    |

| ITEM  | CATEGORY  | STATUS QUO  | SWOT | STRATEGY  | PRIORITY<br>(1) High |
|-------|---|---|------|---|----------------------|
| 3.4   | Customer Care Centre  |   |      |   |                      |
| 3.4.1 | Does the municipality have a CCC and who operates it?   | There is a customer care line in place for reporting purposes.  | O    | Publicise the call centre and encourage the consumers to become the eyes and ears of the municipality and to report water and sanitation related problems.  | 2                    |
| 3.4.2 | How and to whom are billing queries referred?   | Finance is called for billing queries.  | O    | Obtain an electronic system to capture and monitor the queries referred and to track the resolution of the queries.   | 2                    |
| 3.4.3 | To whom are the leak reports referred and do consumers have confidence in the reporting system? | There is a 24 hr. number for leakage reporting in town and satellite offices in the township for reporting during office hrs. | S    | The customer care personnel should receive training on WC/WDM to ensure that they are knowledgeable and equipped to assist the consumers. This will help to improve the communication between the municipality and the community. | 2                    |

| ITEM       | CATEGORY  | STATUS QUO  | SWOT     | STRATEGY  | PRIORITY<br>(1) High |
|------------|---|---|----------|---|----------------------|
| <b>4</b>   | <b>TECHNICAL REVIEW</b>   |   |          |   |                      |
| <b>4.1</b> | <b>Measurement and control</b>  |   |          |   |                      |
| 4.1.1      | Is the system input volume measured, monitored and controlled?                              | The transfer of data between the District and the Local authorities has been a huge problem. There are currently no bulk meters in place. Moorkop has a 12 ML reservoirs, and the new reservoir is 10 ML. | <b>W</b> | Install bulk meters as a matter of priority. Read bulk meters on a monthly basis and monitor input volumes.   | <b>1</b>             |
| 4.1.2      | Is the water supply system sectorised into zones and districts?                             | No sectorisation.   | <b>W</b> | The water supply system must be sectorised into manageable sized areas to allow for improved monitoring.  | <b>2</b>             |
| 4.1.3      | Are the supply to the zones and districts metered?  | No sectorisation has taken place.   | <b>W</b> | Zone meters must be installed and read on a monthly basis. The readings must be captured on a spread sheet.   | <b>2</b>             |
| 4.1.4      | Is the system monitored through a telemetry system?   | There used to be a telemetry in place but it does not exist anymore.  | <b>O</b> | Obtain an appropriate real time telemetry system to improve the monitoring of the network.  | <b>2</b>             |
| 4.1.5      | What is the Frequency and detail of your water balance calculation?                         | Water balance calculations are currently not being undertaken.  | <b>W</b> | Develop an NRW water balance which must be updated on a monthly basis to monitor water losses.  | <b>1</b>             |
| 4.1.6      | Are minimum night flows, consumption trends and logging used to monitor the system?         | No.   | <b>O</b> | Obtain and install logging equipment periodically on the zone meters once they have been installed and conduct MNF analysis to determine leakage levels and areas experiencing high or low pressures.   | <b>3</b>             |
| 4.1.7      | Are monthly management reports prepared and key performance indicators measured?            | No.   | <b>O</b> | Consolidate the available data from the bulk meters and department of finance and compile a monthly NRW report with the relevant KPI's.   | <b>1</b>             |
| <b>4.2</b> | <b>Physical leakage</b>   |   |          |   |                      |
| 4.2.1      | What is the average age of the network, pipe material, replacement programme?               | There is no maintenance and no asset management programme in place. The pipes are very old and they are mainly lines asbestos cement.   | <b>T</b> | Set aside 5% of the CAPEX budget for the replacement of the network.  | <b>1</b>             |
| 4.2.2      | Number of burst pipes reported and repaired per week / month and the average response time? | 2-3 times a month.  | <b>O</b> | Ensure that pipe bursts are repaired within a 48 hour period.   | <b>2</b>             |
| 4.2.3      | What is the primary cause of burst pipes?   | The network is old.   | <b>T</b> | Allocate a proper budget for replacement and refurbishment. Budget a minimum of 5% of the infrastructure value for this purpose to reduce the risk of system failure. Also consider implementing pressure management in areas with high burst frequencies.                    | <b>1</b>             |
| 4.2.4      | Are active leak detection programmes conducted?   | There is no active leak detection taking place.   | <b>O</b> | Undertake active leak detection on the network on an annual basis. Select appropriate areas for the leak detection exercise based on the district meter readings and monitoring process once sectorisation has taken place. As a first phase, focus on visual leak detection. | <b>3</b>             |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY  | PRIORITY<br>(1) High |
|-------|---|--|------|---|----------------------|
| 4.2.5 | How often and for how long do reservoirs overflow?  | The reservoirs don't overflow, there isn't enough water.   | O    | Continue to monitor the reservoirs on a monthly basis. Undertake an annual audit on the condition of the reservoirs.  | 3                    |
| 4.2.6 | Are water losses from treatment processes (backwash, etc.) monitored and minimised?           |  |      |   |                      |
| 4.2.7 | Is leakage on private properties a problem and if so, why?                                    | Internal plumbing leakage is a significant problem in the Municipality.                                      | T    | Undertake an internal leak audit in critical areas to accurately determine the extent of water losses and do a cost benefit analysis to assess the merit of periodically performing leak repairs for indigent consumers.  | 1                    |
| 4.2.8 | Are leaks on indigent private properties repaired and removal of wasteful devices encouraged? | The Municipality currently does not repair internal plumbing leakage.  | T    | Review existing indigent policy and consider undertaking an internal leak audit and repair exercise for indigent and non paying consumers to drastically reduce the NRW.  | 1                    |
| 4.3   | <b>Pressure management and control valves</b>   |  |      |   |                      |
| 4.3.1 | What is the average and maximum system pressure?  | Uncertain.   |      |   |                      |
| 4.3.2 | Is basic or advanced pressure management being implemented?                                   | No pressure management is currently taking place. The main line to Albason has high operating pressures.     | O    | Consider undertaking logging in areas experiencing high burst frequencies and monitor on a monthly basis. If the pressures are high for the area or exceed the regulations stipulated 9 bar, install pressure reducing valves to regulate the pressures more effectively. | 2                    |
| 4.3.3 | Are control valves pro-actively being maintained to prevent overflowing reservoirs?           | No.  | W    | Existing control valves must be maintained or recommissioned to assist in the monitoring of reservoirs and the network.   | 1                    |
| 4.4   | <b>Consumer metering</b>  |  |      |   |                      |
| 4.4.1 | Are domestic and non-domestic consumers metered and which type of meter is used?              | Vhuwani, WaterVaal, Tsanani and Vleifontein are metered. Less than 10% of the domestic consumers are billed. | O    | Meter and bill 100% of non domestic connections as a priority and increasingly meter and bill the domestic consumers where practicable to increase revenue water.   | 1                    |
| 4.4.2 | What is the condition, age and accuracy of water meters?                                      | The meters are generally older than 10 years. They are replaced reactively as and when required.             | O    | Budget and implement a meter replacement programme particularly for bulk and non domestic consumers to improve cost recovery.   | 1                    |
| 4.4.3 | Are the top consumers pro-actively monitored on a monthly basis?                              | No.  | O    | Undertake a non domestic consumer audit and monitor billing information for non domestic consumers on a monthly basis.  | 2                    |
| 4.4.4 | Describe the water quality and its impact on consumer water meters?                           |  |      |   |                      |
| 4.4.5 | What is the prevalence and control of illegal connections?                                    | Illegal connections are a big concern particularly in the domestic consumer sector.                          | T    | Actively monitor illegal connections and periodically undertake an audit on the meters. This can be conducted by the meter readers.   | 1                    |
| 4.5   | <b>Management information</b>   |  |      |   |                      |

| ITEM  | CATEGORY   | STATUS QUO   | SWOT | STRATEGY  | PRIORITY<br>(1) High |
|-------|--|--|------|---|----------------------|
| 4.5.1 | Does the Municipality have an asset register and asset management programme? | There is an asset register which sits with the District.   | S    | Review the asset register system in place. Maintain and update the asset register on an annual basis. Ensure that the asset register provides critical technical information such as the age, value and replacement date of the assets. | 2                    |
| 4.5.2 | What is the status and age of as-built drawings?                             | Very few as built drawings available. Water affairs kept the drawings for the rural schemes and its uncertain whether they were transferred. | T    | Develop electronic as built drawings for the whole network.   | 2                    |
|       |  |  |      |   |                      |

### Summary

| SWOT Analysis  | Helpful  | Harmful   |
|--|--|---|
| <b>Internal factors</b><br>(Staff, infrastructure, tools, equipment) | Bylaw enforcement<br>Effective customer complaints system<br>Well skilled technical department<br>Asset register in place  | High vacancy rate particularly in operations and maintenance<br>Limited materials to undertake operations and maintenance<br>No bulk meters<br>Old dilapidated network<br>No sectorisation<br>Limited as built drawings<br>No management reports are generated<br>Old meters<br>No proactive monitoring of top consumers<br>Intermittent supply in parts of the network |
| <b>Internal factors</b><br>(Politics, finance, consumers, economics) | Effective billing system<br>Affordable tariffs for consumers<br>Good political support<br>Undertake education and awareness<br>Undertake councillor training<br>Repair Internal plumbing leakage<br>Undertake a domestic audit to detect illegal connections | Illegal connections are a significant problem<br>High levels of household plumbing leakage<br>Low levels of water conservation awareness in the community   |

## WCWDM STRATEGY : Quantitative Scorecard

|                          |         |
|--------------------------|---------|
| <b>Municipality Name</b> | Makhado |
| <b>Introduction</b>      |         |

The purpose of the Water Conservation / Water Demand Management (WC/WDM) Scorecard is to ascertain the status quo of WC/WDM and evaluate the potential for WC/WDM measures to be implemented in these systems. The scorecard is also designed to enable the Regulator (Department of Water Affairs) to assess the current situation regarding losses and levels of wastage in all water supply systems countrywide. The scorecard consists of 25 multiple choice questions with each question getting scored from 0 to 4. The Regulator and WSA can track progress with each year the scorecard gets completed. Each question ends with an audit requirement which indicates what will be required by the Regulator should the questionnaire be audited. It also provides an indication on what is required in terms of each of the measures.

| Completed by   |        |  |  |  |         |

## WCWDM STRATEGY : RPMS Compliance

|                          |         |
|--------------------------|---------|
| <b>Municipality name</b> | Makhado |
|--------------------------|---------|

### Key questions from the Regulatory Performance Measurement System (RPMS) related to WC/WDM

| KPI   |  | ID     | WSA Value |
|---|--|--------|-----------|
| <b>KPI 1 – Access to Water</b>                          |  |        |           |
| <b>KPI 2 – Access to Sanitation</b>                     |  |        |           |
| <b>KPI 3 – Access to Free Basic Water</b>               |  |        |           |
|   | Total poor households receiving Free Basic Water for last financial year   | ID:012 |           |
|   | Total poor households  | ID:013 |           |
| <b>KPI 4 – Access to Free Basic Sanitation</b>          |  |        |           |
|   | Total poor households receiving Free Basic Sanitation for last financial year  | ID:014 |           |
|   | Total poor households  | ID:013 |           |
| <b>KPI 5 – Drinking Water Quality</b>                   |  |        |           |
| <b>KPI 6 –Wastewater Quality</b>                        |  |        |           |
| <b>KPI 7 - Customer Services Standards</b>              |  |        |           |
| <b>Component 1 – Service Interruptions</b>              |  |        |           |
|   | Total number of Service interruptions in the last financial year   | ID:034 |           |
|   | Number of interruptions in continuous service to consumers, where interruption for a single incident was greater than 24h  | ID:033 |           |
| <b>Component 2 – CRM Systems</b>                        |  |        |           |
|   | Does the WSA have a customer Charter   | ID:036 |           |
|   | Does the WSA have a customer service centre  | ID:035 |           |
|   | Is there a system to manage customer queries and log faults  | ID:038 |           |
|   | Does the incident tracking system escalate complaints if not responded to within a prescribed time?                        | ID:037 |           |
| <b>KPI 8 - Institutional Effectiveness</b>              |  |        |           |
| <b>Component 1 - Institutional Effectiveness</b>        |  |        |           |
|   | Completed WSDP is approved by Council for the last financial year?   | ID:039 |           |
|   | Required policies are in place and approved by Council?  | ID:040 |           |
|   | Required bylaws are in place and approved by Council?  | ID:041 |           |
|   | Contracts and Service level agreements in place with all appropriate service delivery role-players (WSPs, internal etc.)   | ID:042 |           |
|   | The WSA monitors the KPIs defined by the contract or SLA?  | ID:043 |           |
| <b>Component 2 - Water Services Staff Effectiveness</b> |  |        |           |
|   | Total Water Services staff costs for the last financial year   | ID:045 |           |
|   | Total cost of water and sanitation provision for the last financial year including interest and depreciation (expenditure) | ID:046 |           |
|   | Total budgeted for water services staff according to the approved organogram for the last financial year                   | ID:078 |           |
| <b>Component 3 - Grant Funding Effectiveness</b>        |  |        |           |
|   | Total grant funding allocation received for the last financial year  | ID:048 |           |
|   | Total grant funding allocation spent for the last financial year   | ID:047 |           |
| <b>Component 4 - WSA Annual Report</b>                  |  |        |           |
|   | WSA annual report submitted to Minister  | ID:077 |           |
| <b>Component 5 - % Filled Posts on Organogram</b>       |  |        |           |
|   | Total number of posts on Council-approved organogram for the last financial year for water services staff                  | ID:080 |           |
|   | Total number of posts filled on the approved water services organogram in the last financial year                          | ID:079 |           |

|  |  |         |  |
|--|--|---------|--|
| <b>KPI 9 - Financial Performance</b>                                 |  |         |  |
| <b>Component 1 – Financial Integrity</b>                             |  |         |  |
|  | Is WSA ring-fenced? (Separate legal entity=3, Separate accounting entity=2, Partially ring-fenced=1, Not ring-fenced at all=0) | ID:049  |  |
|  | Audit report evaluation. (Unqualified=4, Qualified=3, Adverse=2, Disclaimer=1, No report=0)                                    | ID:050  |  |
| <b>Component 2 – Average Debtor Days</b>                             |  |         |  |
|  | Water Services sales income for the last financial year (water/sanitation)   | ID:052  |  |
|  | Total outstanding customer/consumer debt for water and sanitation for the last financial year                                  | ID:051  |  |
| <b>Component 3 – Revenue Collection Effectiveness</b>                |  |         |  |
|  | Water Services sales income for the last financial year (water/sanitation)   | ID:052  |  |
|  | Water Services billed income actually received from consumers for last financial year  | ID:053  |  |
| <b>Component 4 – Average Creditor Days</b>                           |  |         |  |
|  | Total bulk water purchases for the last financial year   | ID:055  |  |
|  | Total bulk water accounts outstanding for the last financial year  | ID:054  |  |
| <b>Component 5 – Financial Sustainability</b>                        |  |         |  |
|  | Total water and sanitation income for the last financial year  | ID:056  |  |
|  | Total cost of water and sanitation provision for the last financial year including interest and depreciation (expenditure)     | ID:046  |  |
| <b>Component 6 – Financial Effectiveness</b>                         |  |         |  |
|  | Total outstanding customer/consumer debt (after provisions) for water and sanitation for the last financial year               | ID:051  |  |
|  | Total provision for doubtful debt for water and sanitation for the last financial year   | ID:082  |  |
| <b>KPI 10 Strategic Asset Management</b>                             |  |         |  |
| <b>Component 1 - Capital Spent on Rehabilitation and Replacement</b> |  |         |  |
|  | Total capital budget (Water and Sanitation) in the last financial year   | ID:063  |  |
|  | Total capital spent on refurbishment and replacement in the last financial year  | ID:062  |  |
| <b>Component 2 –Asset Management Effectiveness</b>                   |  |         |  |
|  | Asset management plan status   | ID:057  |  |
|  | Asset register status  | ID:058  |  |
|  | Asset management system is electronic  | ID:059  |  |
| <b>Component 3 – O&amp;M Expenditure</b>                             |  |         |  |
|  | Total spent on O&M/Annual maintenance cost (Water and Sanitation) in the last financial year                                   | ID:060  |  |
|  | Replacement value of assets (water services infrastructure)  | ID:061  |  |
| <b>Component 4 – Replacement Saving</b>                              |  |         |  |
|  | Depreciation value for the last financial year (Water and Sanitation infrastructure)   | ID:065  |  |
|  | Contribution to asset replacement fund for the last financial year. (Water and Sanitation)                                     | ID:064  |  |
| <b>Component 5 – Asset Register Monitoring</b>                       |  |         |  |
|  | Asset register field monitored: Date acquired  | ID:066  |  |
|  | Asset register field monitored: Estimated remaining life of asset  | ID:068  |  |
|  | Asset register field monitored: Replacement value of asset   | ID:070  |  |
|  | Asset register field monitored: Purchase cost of asset   | ID:069  |  |
|  | Asset register field monitored: Description of asset (Yes/No)  | ID:067  |  |
| <b>KPI 11 Water Demand Management</b>                                |  |         |  |
|  | System input volume (external sources) for the last financial year   | ID:121  |  |
|  | System input volume (own sources) for the last financial year  | ID:122  |  |
|  | Total billed metered water consumption (volume) for the last financial year  | ID:071  |  |
|  | Total billed unmetered water consumption (volume) for the last financial year  | ID:074  |  |
|  | Total unbilled metered water consumption (volume) for the last financial year  | ID: 073 |  |
|  | Total unbilled unmetered water consumption (volume) for the last financial year  | ID: 123 |  |
| <b>ADDITIONAL QUESTIONS FOR WATER USE EFFICIENCY</b>                 |  |         |  |

|                                     |  |         |  |
|-------------------------------------|--|---------|--|
|                                     | Water Conservation and Water Demand Management plan  |         |  |
|                                     | Installation of water efficient devices  |         |  |
|                                     | Repair of leaks  |         |  |
|                                     | Measurement or control of water supplied   |         |  |
|                                     | Pressure management  |         |  |
| <b>Additional KPI : Tariff Data</b> |  |         |  |
|                                     | Which of the listed elements are taken into account when you determine your tariff? Indicate from the list provided                  | ID: 201 |  |
|                                     | Total amount of subsidies allocated to water for the next financial year   | ID: 202 |  |
|                                     | Total projected cost of water provision for the next financial year  | ID: 203 |  |
|                                     | Does your tariff recognise the difference between levels of service (according to Regulation 4 under s10 of the Water Services Act)? | ID: 204 |  |
|                                     | Does your tariff recognise the difference between socio-economic status of customers (according to s10 of the Water Services Act)?   | ID: 205 |  |
|                                     | Do you charge a rising block tariff?   | ID: 206 |  |
|                                     | How many blocks are in your tariff structure?  | ID: 207 |  |
|                                     | What is your approved standard tariff? (Basic levy)  | ID: 208 |  |
|                                     | What are the actual 2010/2011 tariffs for the following consumer categories?   | ID: 209 |  |
|                                     | Do you reflect your tariff structure on your bill?   | ID: 210 |  |
|                                     | What are the quantities of water supplied to the following consumer categories (annually)?   | ID: 211 |  |
|                                     | What is the unit number of consumers served with water in each consumer category?  | ID: 212 |  |
|                                     | Do you have a seasonal tariff in your WSA?   | ID: 213 |  |
|                                     | Does your tariff include a fixed charge?   | ID: 214 |  |
|                                     | If a fixed charge is levied, do you subsidise the FBW?   | ID: 215 |  |
|                                     | What other sources of water services revenue (other than tariffs) does your WSA have? Indicate sources on the list provided          | ID: 216 |  |
|                                     | Total annual water services surplus / deficit  | ID: 217 |  |

| Municipality   | Musina   |                 |                    |                         |                        |            |
| Settlements  | Beitbridge, Bridgewater, Brombeek, Evangelina, Huntleigh, Mopane, Musina, Tshipise |                 |                    |                         |                        |            |
|  |  |                 |                    |                         |                        |            |
| Executive summary  |  |                 |                    |                         |                        |            |
| Status quo   |  |                 |                    |                         |                        |            |
| <p>Very limited WCWDM activities are undertaken in the WSA and there is little management information available to perform a proper assessment of the water losses and potential savings. This assessment is inline with the RPMS, Blue Drop assessments, IDP and WSDP. Most of the towns are informal with formal infrastructure in a relatively smaller area within the LM which enables limited metering, billing and cost recovery in the WSA. The current metering, billing and cost recovery systems are adequate however improvements can be made in the capturing and tracking of monthly management information.</p> <p>The engineering department in the Local Municipality is characterised by high vacancies and low capacity and skills. The current estimated unit consumption of <b>262 l/c/d</b> is high and provides good scope for significant reduction but a more detailed analysis is required to verify this number. It seems there has been a drastic decrease in the average unit consumption in the area. The relationship with the community is generally positive and the communities themselves are characterised by high unemployment and a large indigent population. <del>The water tariffs are not promoting WCWDM, are not cost reflective and consumers do not value water supply.</del></p> |  |                 |                    |                         |                        |            |
| Strategy   |  |                 |                    |                         |                        |            |
| <p>The municipality should focus on proper record keeping, analysis and development of detailed management information. All vacancies must be filled as a matter of priority together with skills transfer and capacity building. The engineering and finance department must work closer together at the LM and DM level to improve metering, billing and cost recovery and start with a meter audit to further improve cost recovery. A steering committee should be setup to report on a monthly basis to council on water loss figures, leaks repaired, targets, progress, consumer metering, billing and cost recovery.</p> <p>Proper metering, billing and cost recovery should be supported by community awareness that promotes reporting of leaks, fixing of private leaks and efficient use. Based on the available information, a target reduction in NRW of <b>22.8% down to 14.2%</b> and target input volume reduction of <b>8.6%</b> have been set. Review the water tariff structure to ensure it reflects true cost, promote WCWDM and work towards compliance with RPMS and improve IDP.</p>   |  |                 |                    |                         |                        |            |
| Business Plan  |  |                 |                    |                         |                        |            |
| The budget requirements for the next five years are summarised in the table below:   |  |                 |                    |                         |                        |            |

## WCWDM STRATEGY : Qualitative Scorecard

| Municipality Name  |  | Musina   |  |      |   |          |
|--|--|--|--|------|---|----------|
| Introduction   |  |  |  |      |   |          |
| The purpose of this section is to perform a qualitative evaluation of the municipality's water business. The objectives are as follows : |  |  |  |      |   |          |
| SWOT Analysis  |  | External - Opportunities<br>Positive external conditions which you don't control which you could take advantage of   | External - Threats<br>Negative conditions you don't control but could minimise their effects |      |   |          |
| Internal - Strengths<br>Positive aspects under your control and on which you may wish to capitalise                                      |  | Strengths and Opportunities (SO) –<br>Strategies that use strengths to maximize opportunities.   | Strengths and Threats (ST) –<br>Strategies that use strengths to minimize threats.           |      |   |          |
| Internal - Weaknesses<br>Negative aspects under your control (to a large extent) which you could plan to improve                         |  | Weaknesses and Opportunities (WO) –<br>Strategies that minimize weaknesses by taking advantage of opportunities.   | Weaknesses and Threats (WT) –<br>Strategies that minimize weaknesses and avoid threats.      |      |   |          |
| ITEM   | CATEGORY   | STATUS QUO   |  | SWOT | STRATEGY  | PRIORITY |
| 1  | INSTITUTIONAL REVIEW   |  |  |      |   |          |
| 1.1  | Water and Sanitation department structure                                    |  |  |      |   |          |
| 1.1.1  | Is there an approved organogram for the Water and Sanitation Department?     | Yes.   |  | O    | Review the existing organogram and ensure that it incorporates WC/WDM personnel.  | 1        |
| 1.1.2  | What is the vacancy rate in the department and is it a problem?              | Approximately 20% mainly operational staff.  |  | T    | Advertise and fill the identified critical vacant posts. Engage with the Department of finance at the District Level to identify and explore possible funding options and budget requirements for the critical posts. | 1        |
| 1.1.3  | Does the department have the correct technical skills for the correct posts. | The water department is not correctly skilled. Most of the staff is old and difficult to train. The levels of literacy are low. The superintendents are not fully skilled and an operations manager is required. Prioritisation of operational staff is lacking. Many managerial positions are under acting status. People are afraid to make decisions. |  | T    | Increase management, and O&M capacity through new human resources and support it with WC/WDM training.  | 1        |
| 1.1.4  | Is training and capacity building being done?                                | No training and capacity building is taking place.   |  | O    | Institute a mandatory WC/WDM training programme for technical staff. Invest in team building and workshop sessions incorporating the councillors and municipal management to boost staff morale.                      | 2        |

| ITEM  | CATEGORY  | STATUS QUO  | SWOT | STRATEGY  | PRIORITY |
|-------|---|---|------|---|----------|
| 1.1.5 | Are there sufficient support structures ito vehicles, equipment, materials etc.?                    | There is not enough material and vehicles.  | T    | Engage with the Department of Finance at the District level and allocate an adequate budget for the critical spares. Allocate a specific person who will be responsible for expediting equipment orders and managing quality control in terms of the procurement processes. | 1        |
| 1.1.6 | Does the municipality own any water loss control equipment such as loggers, listening sticks, etc.? | No water loss equipment.  | O    | It is recommended that loggers and simple leak detection equipment be purchased to improve water loss monitoring and management in the system.  | 3        |
| 1.2   | <b>Municipal support</b>  |   |      |   |          |
| 1.2.1 | Describe the working relationship with other departments such finance, planning, housing etc.?      | There are long periods in which the departments don't meet. The working relationship is fair but the frequency of meeting is not good enough. | T    | Establish a NRW steering committee comprising representatives from the technical, communications and finance departments to improve communication and access to information.  | 1        |
| 1.2.2 | Are the politicians supporting the department?  | The politicians are very supportive. Some training is required on the water business.   | O    | Undertake a councillor WC/WDM induction programme to capitalise on the existing relationship and build a communication bridge between the municipality and the customers.   | 2        |
| 1.3   | <b>Public Private Partnerships</b>  |   |      |   |          |
| 1.3.1 | Is there any major industrial or institutional role player in the area and is there co-operation?   | Venesia mine and coal of Africa mine are potential partners.  | O    | Identify any other additional role players through the top consumer monitoring and conduct courtesy visits as a first phase of the programme. Establish a stakeholder forum if practicable and encourage the participation of the big industries in the forum.              | 2        |
| 1.3.2 | If yes, what does the co-operation involve and can it be expanded?                                  |   |      |   |          |
| 1.4   | <b>Legislation and bylaws</b>   |   |      |   |          |
| 1.4.1 | Does the municipality have a customer service charter?  | No.   | O    | Develop a customer service charter to ensure the customers are aware of the municipality's commitment and their responsibilities as consumers.  | 3        |
| 1.4.2 | What is the status and age of the existing bylaws and do they address water loss management?        | The municipality uses the District bylaws but the district bylaws are under review. The municipality should ideally have its own bylaws.      | O    | Develop appropriate bylaws specific to Musina Municipality and ensure that they address WC/WDM issues.  | 3        |
| 1.4.3 | Are bylaws enforced and if not, why not?  |   |      |   |          |
| 1.4.4 | What is the status and age of Water Services Development Plan?                                      |   |      |   |          |
| 2     | <b>FINANCIAL REVIEW</b>   |   |      |   |          |
| 2.1   | <b>Financial Department</b>   |   |      |   |          |

| ITEM  | CATEGORY   | STATUS QUO  | SWOT | STRATEGY  | PRIORITY |
|-------|--|---|------|---|----------|
| 2.1.1 | What is your opinion of the Finance Department's ability to perform metering and billing | The finance department competently carries out its mandate.   | O    | Improve communication and access to information between the technical and finance department through scheduled monthly team meetings in order to fully utilise this resource.   | 1        |
| 2.1.2 | Is training and capacity building being done?  |   |      |   |          |
| 2.1.3 | What is the state of the municipal metering and billing system?                          | The billing system is effective and the billing is frequent and continuous.                                     | S    | Obtain billed metered consumption from the finance department on a monthly basis and monitor water sales.   | 1        |
| 2.1.4 | What is your primary source of funding?  | MIG funding and the district allocation.  | T    | Focus on improving cost recovery to reduce dependency on MIG funding.   | 2        |
| 2.2   | <b>Tariffs</b>   |   |      |   |          |
| 2.2.1 | Who prepares the water tariffs and what is it based on?                                  | Finance develops the tariffs with no input from technical.  | T    | Ensure that the technical department makes inputs into the tariff setting process to ensure that the tariffs are feasible for the municipality and the consumers.   | 1        |
| 2.2.2 | What is the tariff structure and does it promote WCWDM?                                  | The municipality currently uses a flat tariff structure.  | T    | Review the current tariff structure. Institute a rising block tariff sufficiently differentiated in cost at each level to promote WC/WDM with the highest tariff at least double the lowest tariff.                   | 2        |
| 2.2.3 | Is the water supplied considered affordable by the customers?                            | The customers complain that the tariff is too high which is currently in the region of R5/Kl.                   | T    | Review the tariffs and ensure that they become affordable particularly for the efficient and low income water users.  | 1        |
| 2.3   | <b>Meter Reading and Billing</b>   |   |      |   |          |
| 2.3.1 | Who performs the water meter readings, frequency and accuracy?                           | The municipality.   | O    | Monitor the frequency of meter reading and customer complaints of inaccurate billing to determine the effectiveness of the existing meter reading contractor.   | 2        |
| 2.3.2 | Are the meter readers trained and can they report leakage when encountered on site?      | The meter readers do report leakage.  | O    | Providing training for the meter readers on an annual basis particularly on site training based on feedback from the consumers.   | 2        |
| 2.3.3 | Is the water bill understandable and informative?  | The bill is informative shows the previous months consumption. Some of the consumers don't understand the bill. | O    | Consider including water conservation tips and information in the water bill. It is also recommended to display 6 months graphical consumption data on the bill to aid consumers in effectively monitoring water use. | 3        |
| 2.4   | <b>Credit control</b>  |   |      |   |          |
| 2.4.1 | Is credit control being implemented and by whom?   | The Department of Finance is implementing credit control. They are very effective.                              | O    | Capitalise on the relationship with the councillors and the community and ensure that the areas that are not yet metered are metered and billed to increase revenue water.  | 3        |
| 2.4.2 | What is the current level of non-payment?  | Levels of non payment are generally low.  | O    | Continue to promote payment for services in the metered areas through the councillors and education and awareness.  | 2        |
| 3     | <b>SOCIAL REVIEW</b>   |   |      |   |          |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY   | PRIORITY |
|-------|---|--|------|--|----------|
| 3.1   | <b>Customer profile</b>   |  |      |  |          |
| 3.1.1 | Describe the general consumer profile i.e. Income levels, indigence, unemployment, literacy           | There are approximately 2409 indigent households in the municipality   | O    | Focus on educating the indigent population on efficient water use and the importance of the free basic allocation as well as its limitations.  | 1        |
| 3.1.2 | Describe the relationship between customers and the municipality and reasons?                         | The consumers are generally satisfied with the water services so the relationship between the community and the municipality is largely positive in this regard. | O    | The existing relationship should be improved on and utilised to increasingly promote water conservation and to support the cost recovery initiatives.  | 1        |
| 3.2   | <b>Customer awareness</b>   |  |      |  |          |
| 3.2.1 | Are consumers informed regarding the value of water?  | There has been community awareness done with the politicians on an adhoc basis. The consumers are generally not wasteful.  | O    | Continue to promote water efficiency. Utilise this positive community attribute and encourage the installation of water efficient devices and leak repair to further decrease water losses.  | 2        |
| 3.2.2 | What is the level of leakage reporting by the community and what method do they use?                  | The levels of reporting are high and generally reporting is done in person.  | O    | Publicise the municipal leakage reporting number through the councillors, pamphlets attached to water bills and local media to promote reporting of leakage.   | 2        |
| 3.2.3 | What are the most prominent consumer behavioural challenges encountered by the municipality?          | The car washes are problematic as well as cable theft at the pump stations. Only one pump is operational at the moment out of the 2 existing pumps.              | T    | The community awareness campaign should be tailored to address these problems. The councillors should be encouraged to make these issues an agenda at all public meetings held in the different wards.   | 2        |
| 3.2.4 | Is xeriscaped gardening and rain water harvesting encouraged?   | No.  | O    | As part of a community awareness campaign, encourage consumers to harvest rain water and utilise it for garden irrigation and cleaning to reduce the demand for potable water.   | 2        |
| 3.2.5 | Are radio campaigns, bill board, pamphlets, informative billing used to inform and educate customers? | Some education and awareness is conducted through the Musina radio station twice a month.  | O    | Develop simple visual material in the form of pamphlets which can be used to educate consumers on efficient water use. Build on the media campaign undertaken and periodically publicise water tips on local radio stations and newspapers.  | 2        |
| 3.3   | <b>Schools awareness</b>  |  |      |  |          |
| 3.3.1 | Number of primary and secondary schools?  | 9 schools in town.   | O    | Establish a relationship with schools. Monitor their consumption on a monthly basis and undertake education and awareness. Huge benefit can be derived from this. The section 21 schools in particular should be visited, monitored and encouraged to fix leakage as the O&M budgets are operated by the school management for this category of schools. | 2        |
| 3.3.2 | Frequency and scope of schools awareness campaigns?   | No schools awareness.  | O    | Establish a relationship with schools. Monitor their consumption and undertake education and awareness.  | 3        |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY  | PRIORITY |
|-------|---|--|------|---|----------|
| 3.3.3 | Are goals and objectives monitored and controlled?  | No.  |      |   |          |
| 3.4   | <b>Customer Care Centre</b>   |  |      |   |          |
| 3.4.1 | Does the municipality have a CCC and who operates it?   | No customer care section.  | O    | Obtain a trained individuals to receive and refer customer complaints and establish a customer care land line. Publicise the call centre and encourage the consumers to become the eyes and ears of the municipality and to report water and sanitation related problems. | 2        |
| 3.4.2 | How and to whom are billing queries referred?   |  |      |   |          |
| 3.4.3 | To whom are the leak reports referred and do consumers have confidence in the reporting system? | The billing and leakage reports go through switch board and are referred to the technical and billing department accordingly. The complaints are captured electronically by the service provider and submitted to Vhembe but the municipality does not have such a system. | O    | Obtain an electronic system to capture and monitor the queries referred and to track the resolution of the queries.   | 2        |

| ITEM       | CATEGORY  | STATUS QUO  | SWOT     | STRATEGY   | PRIORITY |
|------------|---|---|----------|--|----------|
| <b>4</b>   | <b>TECHNICAL REVIEW</b>   |   |          |  |          |
| <b>4.1</b> | <b>Measurement and control</b>  |   |          |  |          |
| 4.1.1      | Is the system input volume measured, monitored and controlled?                              | Weekly bulk meter readings are taken.   | <b>S</b> | Continue to read the bulk meters to monitor input volumes. Record the readings on a spreadsheet for water balance purposes.  | <b>1</b> |
| 4.1.2      | Is the water supply system sectorised into zones and districts?                             | Sectorisation has been done.  | <b>S</b> | Monitor zone discreteness on an annual basis.  | <b>1</b> |
| 4.1.3      | Are the supply to the zones and districts metered?  | The zones are metered but the meters are not being read.  | <b>S</b> | The zone meters must be read on a monthly basis and captured on a spread sheet. Ensure that operation of the boundary valves is well understood by all O&M personnel to ensure the zones are kept discrete and functioning properly. | <b>1</b> |
| 4.1.4      | Is the system monitored through a telemetry system?   | There is an operational telemetry system which monitors the reservoirs.   |          |  |          |
| 4.1.5      | What is the Frequency and detail of your water balance calculation?                         |   |          |  |          |
| 4.1.6      | Are minimum night flows, consumption trends and logging used to monitor the system?         | No.   | <b>O</b> | Obtain and install logging equipment periodically on the bulk meters once they have been installed and conduct MNF analysis to determine leakage levels and areas experiencing high or low pressures.                                | <b>3</b> |
| 4.1.7      | Are monthly management reports prepared and key performance indicators measured?            | This is performed on a monthly basis. The report goes to the CFO, the Technical director and the technical director in VDM.       | <b>O</b> | Continue to keep a monthly record of the water balance figures. Include all relevant key performance indicators and submit the records to DWA on an annual basis.  | <b>1</b> |
| <b>4.2</b> | <b>Physical leakage</b>   |   |          |  |          |
| 4.2.1      | What is the average age of the network, pipe material, replacement programme?               | The network is not very old. Some of the areas are only 5-6 years old. The network in the town is old and mostly galvanised iron. | <b>T</b> | Set aside 5% of the CAPEX budget for the replacement of the network.   | <b>1</b> |
| 4.2.2      | Number of burst pipes reported and repaired per week / month and the average response time? | Very few pipe bursts.   | <b>S</b> | Continue to monitor the frequency of pipe bursts through the leak detection. Ensure that all pipe bursts are fixed within 48hrs.   | <b>1</b> |
| 4.2.3      | What is the primary cause of burst pipes?   | This happens on rare occasions and is usually accidental.   |          |  |          |
| 4.2.4      | Are active leak detection programmes conducted?   | Yes it is taking place through the service provider. This is done on a continuous basis.  | <b>O</b> | Undertake active leak detection on the network on an annual basis. Select appropriate areas for the leak detection exercise based on the district meter readings. This can be done through the meter readers.                        | <b>3</b> |
| 4.2.5      | How often and for how long do reservoirs overflow?  | No overflows take place.  | <b>S</b> | Continue to monitor the reservoirs on a monthly basis. Undertake an annual audit on the condition of the reservoirs.   | <b>3</b> |
| 4.2.6      | Are water losses from treatment processes (backwash, etc.) monitored and minimised?         | No.   |          |  |          |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY  | PRIORITY |
|-------|---|--|------|---|----------|
| 4.2.7 | Is leakage on private properties a problem and if so, why?                                    | Leaking internal fittings are a big problem and its mostly toilets.  | T    | Undertake an internal leak audit in critical areas to accurately determine the extent of water losses and do a cost benefit analysis to assess the merit of periodically performing leak repairs for indigent consumers.  | 1        |
| 4.2.8 | Are leaks on indigent private properties repaired and removal of wasteful devices encouraged? | No. Internal leaks are fixed on a discretionary basis.   | T    | Review existing indigent policy and consider undertaking an internal leak audit and repair exercise for indigent and non paying consumers to drastically reduce the NRW.  | 1        |
| 4.3   | <b>Pressure management and control valves</b>   |  |      |   |          |
| 4.3.1 | What is the average and maximum system pressure?  | Uncertain.   |      |   |          |
| 4.3.2 | Is basic or advanced pressure management being implemented?                                   | No pressure management is conducted.   | O    | Consider undertaking logging in areas experiencing high burst frequencies and monitor on a monthly basis. If the pressures are high for the area or exceed the regulations stipulated 9 bar, install pressure reducing valves to regulate the pressures more effectively. | 2        |
| 4.3.3 | Are control valves pro-actively being maintained to prevent overflowing reservoirs?           | The control valves are proactively maintained and checked every day.   | S    | Undertake an annual control valve audit to assess the condition of the control valves and ensure that they are in proper working order.   | 2        |
| 4.4   | <b>Consumer metering</b>  |  |      |   |          |
| 4.4.1 | Are domestic and non-domestic consumers metered and which type of meter is used?              | There are 6789 metered connections in total.   | O    | Meter and bill 100% of non domestic connections as a priority and increasingly meter and bill the domestic consumers where practicable to increase revenue water.   | 1        |
| 4.4.2 | What is the condition, age and accuracy of water meters?                                      | The accuracy of the meter readings is very good. There are very few billing complaints and the verifications generally come back correct. The majority of the meters are less than 10 years. Most of the old meters are in town. Most of the meters are conventional meters. There are approximately 740 prepaid meters in the system. | O    | Continue to budget and implement meter replacement programmes particularly for bulk and non domestic consumers.   | 1        |
| 4.4.3 | Are the top consumers pro-actively monitored on a monthly basis?                              |  |      |   |          |
| 4.4.4 | Describe the water quality and its impact on consumer water meters?                           | Thanda village has very bad water quality. The rest of the villages have class 2 water quality and the town has class 1 water quality.   | W    | Consider installing a water treatment package plant in selected areas with bad water quality to improve the services to those areas. Metering and billing can then be effected to recover the costs.  | 2        |
| 4.4.5 | What is the prevalence and control of illegal connections?                                    | Illegal connections are a big problem in the municipality especially in the farming community along the distribution main. There is one that is 75MM diameter connected onto the distribution main.  | O    | Actively monitor illegal connections and periodically undertake an audit on the meters. This can be conducted by the meter readers.   | 1        |
| 4.5   | <b>Management information</b>   |  |      |   |          |

| ITEM  | CATEGORY   | STATUS QUO  | SWOT | STRATEGY  | PRIORITY |
|-------|--|---|------|---|----------|
| 4.5.1 | Does the Municipality have an asset register and asset management programme? | There is a comprehensive asset register that sits with the VDM.   | O    | Review the asset register system in place. Maintain and update the asset register on an annual basis. Ensure that the asset register provides critical technical information such as the age, value and replacement date of the assets. | 2        |
| 4.5.2 | What is the status and age of as-built drawings?                             | The status of the as built drawings is uncertain however there are as built drawings for the water treatment works. | T    | Develop electronic as built drawings for the whole network.   | 2        |

### Summary

| SWOT Analysis   | Helpful  | Harmful  |
|---|--|--|
| <b>Internal factors</b><br><b>(Staff, infrastructure, tools, equipment)</b> | Proactive maintenance of control valves<br>The network is sectorised<br>Weekly bulk meter readings are taken<br>Zone metering has taken place<br>Limited pipe bursts<br>Comprehensive asset register<br>Reservoirs monitored through a telemetry system<br>Management reports are generated on a monthly basis | High vacancy rate particularly in operations and maintenance<br>Limited materials to undertake operations and maintenance<br>No training and capacity building<br>Old dilapidated network<br>Limited as built drawings |
| <b>Internal factors</b><br><b>(Politics, finance, consumers, economics)</b> | Effective billing system<br>Good credit control<br>Positive relationship with the consumers<br>Good political support<br>Low levels of non payment   | Illegal connections are a significant problem<br>High levels of internal plumbing leakage<br>No customer care section<br>High dependence on MIG funding  |

## WCWDM STRATEGY : Quantitative Scorecard

|                          |        |
|--------------------------|--------|
| <b>Municipality Name</b> | Musina |
| <b>Introduction</b>      |        |

The purpose of the Water Conservation / Water Demand Management (WC/WDM) Scorecard is to ascertain the status quo of WC/WDM and evaluate the potential for WC/WDM measures to be implemented in these systems. The scorecard is also designed to enable the Regulator (Department of Water Affairs) to assess the current situation regarding losses and levels of wastage in all water supply systems countrywide. The scorecard consists of 25 multiple choice questions with each question getting scored from 0 to 4. The Regulator and WSA can track progress with each year the scorecard gets completed. Each question ends with an audit requirement which indicates what will be required by the Regulator should the questionnaire be audited. It also provides an indication on what is required in terms of each of the measures.

| Completed by   | PSP    |  |  |  |         |

### Key questions from the Regulatory Performance Measurement System (RPMS) related to WC/WDM

| KPI   |  | ID     | WSA Value |
|---|--|--------|-----------|
| <b>KPI 1 – Access to Water</b>                          |  |        |           |
| <b>KPI 2 – Access to Sanitation</b>                     |  |        |           |
| <b>KPI 3 – Access to Free Basic Water</b>               |  |        |           |
|   | Total poor households receiving Free Basic Water for last financial year   | ID:012 |           |
|   | Total poor households  | ID:013 |           |
| <b>KPI 4 – Access to Free Basic Sanitation</b>          |  |        |           |
|   | Total poor households receiving Free Basic Sanitation for last financial year  | ID:014 |           |
|   | Total poor households  | ID:013 |           |
| <b>KPI 5 – Drinking Water Quality</b>                   |  |        |           |
| <b>KPI 6 –Wastewater Quality</b>                        |  |        |           |
| <b>KPI 7 - Customer Services Standards</b>              |  |        |           |
| <b>Component 1 – Service Interruptions</b>              |  |        |           |
|   | Total number of Service interruptions in the last financial year   | ID:034 |           |
|   | Number of interruptions in continuous service to consumers, where interruption for a single incident was greater than 24h  | ID:033 |           |
| <b>Component 2 – CRM Systems</b>                        |  |        |           |
|   | Does the WSA have a customer Charter   | ID:036 |           |
|   | Does the WSA have a customer service centre  | ID:035 |           |
|   | Is there a system to manage customer queries and log faults  | ID:038 |           |
|   | Does the incident tracking system escalate complaints if not responded to within a prescribed time?                        | ID:037 |           |
| <b>KPI 8 - Institutional Effectiveness</b>              |  |        |           |
| <b>Component 1 - Institutional Effectiveness</b>        |  |        |           |
|   | Completed WSDP is approved by Council for the last financial year?   | ID:039 |           |
|   | Required policies are in place and approved by Council?  | ID:040 |           |
|   | Required bylaws are in place and approved by Council?  | ID:041 |           |
|   | Contracts and Service level agreements in place with all appropriate service delivery role-players (WSPs, internal etc)    | ID:042 |           |
|   | The WSA monitors the KPIs defined by the contract or SLA?  | ID:043 |           |
| <b>Component 2 - Water Services Staff Effectiveness</b> |  |        |           |
|   | Total Water Services staff costs for the last financial year   | ID:045 |           |
|   | Total cost of water and sanitation provision for the last financial year including interest and depreciation (expenditure) | ID:046 |           |
|   | Total budgeted for water services staff according to the approved organogram for the last financial year                   | ID:078 |           |
| <b>Component 3 - Grant Funding Effectiveness</b>        |  |        |           |
|   | Total grant funding allocation received for the last financial year  | ID:048 |           |
|   | Total grant funding allocation spent for the last financial year   | ID:047 |           |
| <b>Component 4 - WSA Annual Report</b>                  |  |        |           |
|   | WSA annual report submitted to Minister  | ID:077 |           |
| <b>Component 5 - % Filled Posts on Organogram</b>       |  |        |           |
|   | Total number of posts on Council-approved organogram for the last financial year for water services staff                  | ID:080 |           |
|   | Total number of posts filled on the approved water services organogram in the last financial year                          | ID:079 |           |

|  |  |         |  |
|--|--|---------|--|
| <b>KPI 9 - Financial Performance</b>                                 |  |         |  |
| <b>Component 1 – Financial Integrity</b>                             |  |         |  |
|  | Is WSA ring-fenced? (Separate legal entity=3, Separate accounting entity=2, Partially ring-fenced=1, Not ring-fenced at all=0) | ID:049  |  |
|  | Audit report evaluation. (Unqualified=4, Qualified=3, Adverse=2, Disclaimer=1, No report=0)                                    | ID:050  |  |
| <b>Component 2 – Average Debtor Days</b>                             |  |         |  |
|  | Water Services sales income for the last financial year (water/sanitation)   | ID:052  |  |
|  | Total outstanding customer/consumer debt for water and sanitation for the last financial year                                  | ID:051  |  |
| <b>Component 3 – Revenue Collection Effectiveness</b>                |  |         |  |
|  | Water Services sales income for the last financial year (water/sanitation)   | ID:052  |  |
|  | Water Services billed income actually received from consumers for last financial year  | ID:053  |  |
| <b>Component 4 – Average Creditor Days</b>                           |  |         |  |
|  | Total bulk water purchases for the last financial year   | ID:055  |  |
|  | Total bulk water accounts outstanding for the last financial year  | ID:054  |  |
| <b>Component 5 – Financial Sustainability</b>                        |  |         |  |
|  | Total water and sanitation income for the last financial year  | ID:056  |  |
|  | Total cost of water and sanitation provision for the last financial year including interest and depreciation (expenditure)     | ID:046  |  |
| <b>Component 6 – Financial Effectiveness</b>                         |  |         |  |
|  | Total outstanding customer/consumer debt (after provisions) for water and sanitation for the last financial year               | ID:051  |  |
|  | Total provision for doubtful debt for water and sanitation for the last financial year   | ID:082  |  |
| <b>KPI 10 Strategic Asset Management</b>                             |  |         |  |
| <b>Component 1 - Capital Spent on Rehabilitation and Replacement</b> |  |         |  |
|  | Total capital budget (Water and Sanitation) in the last financial year   | ID:063  |  |
|  | Total capital spent on refurbishment and replacement in the last financial year  | ID:062  |  |
| <b>Component 2 –Asset Management Effectiveness</b>                   |  |         |  |
|  | Asset management plan status   | ID:057  |  |
|  | Asset register status  | ID:058  |  |
|  | Asset management system is electronic  | ID:059  |  |
| <b>Component 3 – O&amp;M Expenditure</b>                             |  |         |  |
|  | Total spent on O&M/Annual maintenance cost (Water and Sanitation) in the last financial year                                   | ID:060  |  |
|  | Replacement value of assets (water services infrastructure)  | ID:061  |  |
| <b>Component 4 – Replacement Saving</b>                              |  |         |  |
|  | Depreciation value for the last financial year (Water and Sanitation infrastructure)   | ID:065  |  |
|  | Contribution to asset replacement fund for the last financial year. (Water and Sanitation)                                     | ID:064  |  |
| <b>Component 5 – Asset Register Monitoring</b>                       |  |         |  |
|  | Asset register field monitored: Date acquired  | ID:066  |  |
|  | Asset register field monitored: Estimated remaining life of asset  | ID:068  |  |
|  | Asset register field monitored: Replacement value of asset   | ID:070  |  |
|  | Asset register field monitored: Purchase cost of asset   | ID:069  |  |
|  | Asset register field monitored: Description of asset (Yes/No)  | ID:067  |  |
| <b>KPI 11 Water Demand Management</b>                                |  |         |  |
|  | System input volume (external sources) for the last financial year   | ID:121  |  |
|  | System input volume (own sources) for the last financial year  | ID:122  |  |
|  | Total billed metered water consumption (volume) for the last financial year  | ID:071  |  |
|  | Total billed unmetered water consumption (volume) for the last financial year  | ID:074  |  |
|  | Total unbilled metered water consumption (volume) for the last financial year  | ID: 073 |  |
|  | Total unbilled unmetered water consumption (volume) for the last financial year  | ID: 123 |  |
| <b>ADDITIONAL QUESTIONS FOR WATER USE EFFICIENCY</b>                 |  |         |  |

|                                     |  |         |  |
|-------------------------------------|--|---------|--|
|                                     | Water Conservation and Water Demand Management plan  |         |  |
|                                     | Installation of water efficient devices  |         |  |
|                                     | Repair of leaks  |         |  |
|                                     | Measurement or control of water supplied   |         |  |
|                                     | Pressure management  |         |  |
| <b>Additional KPI : Tariff Data</b> |  |         |  |
|                                     | Which of the listed elements are taken into account when you determine your tariff? Indicate from the list provided                  | ID: 201 |  |
|                                     | Total amount of subsidies allocated to water for the next financial year   | ID: 202 |  |
|                                     | Total projected cost of water provision for the next financial year  | ID: 203 |  |
|                                     | Does your tariff recognise the difference between levels of service (according to Regulation 4 under s10 of the Water Services Act)? | ID: 204 |  |
|                                     | Does your tariff recognise the difference between socio-economic status of customers (according to s10 of the Water Services Act)?   | ID: 205 |  |
|                                     | Do you charge a rising block tariff?   | ID: 206 |  |
|                                     | How many blocks are in your tariff structure?  | ID: 207 |  |
|                                     | What is your approved standard tariff? (Basic levy)  | ID: 208 |  |
|                                     | What are the actual 2010/2011 tariffs for the following consumer categories?   | ID: 209 |  |
|                                     | Do you reflect your tariff structure on your bill?   | ID: 210 |  |
|                                     | What are the quantities of water supplied to the following consumer categories (annually)?   | ID: 211 |  |
|                                     | What is the unit number of consumers served with water in each consumer category?  | ID: 212 |  |
|                                     | Do you have a seasonal tariff in your WSA?   | ID: 213 |  |
|                                     | Does your tariff include a fixed charge?   | ID: 214 |  |
|                                     | If a fixed charge is levied, do you subsidise the FBW?   | ID: 215 |  |
|                                     | What other sources of water services revenue (other than tariffs) does your WSA have? Indicate sources on the list provided          | ID: 216 |  |
|                                     | Total annual water services surplus / deficit  | ID: 217 |  |

| Settlements  | Masisi, Mutale |                 |            |                         |                |                        |
| Executive summary  |                |                 |            |                         |                |                        |
| Status quo   |                |                 |            |                         |                |                        |
| <p>Very limited WCWDM activities are undertaken in the WSA and there is little management information available to perform a proper assessment of the water losses and potential savings. This assessment is in line with the RPMS, Blue Drop assessments, IDP and WSDP. Most of the towns are informal with formal infrastructure in a relatively smaller area within the LM which enables limited metering, billing and cost recovery in the WSA. The current metering, billing and cost recovery systems are adequate however improvements can be made in the capturing and tracking of monthly management information.</p> <p>The engineering department in the Local Municipality is characterised by high vacancies and low capacity and skills. The current estimated unit consumption of <b>2791 l/c/d</b> is high and provides good scope for significant reduction but a more detailed analysis is required to verify this number. It seems there has been a drastic decrease in the average unit consumption in the area. The relationship with the community is generally positive and the communities themselves are characterised by high unemployment and a large indigent population. <del>The water tariffs are not promoting WCWDM, are not cost reflective but consumers do value water supply.</del></p> |                |                 |            |                         |                |                        |
| Strategy   |                |                 |            |                         |                |                        |
| <p>The municipality should focus on proper record keeping, analysis and development of detailed management information. All vacancies must be filled as a matter of priority together with skills transfer and capacity building. The engineering and finance department must work closer together at the LM and DM level to improve metering, billing and cost recovery and start with a meter audit to further improve cost recovery. A steering committee should be setup to report on a monthly basis to council on water loss figures, leaks repaired, targets, progress, consumer metering, billing and cost recovery.</p> <p>Proper metering, billing and cost recovery should be supported by community awareness that promotes reporting of leaks, fixing of private leaks and efficient use. Based on the available information, a target reduction in NRW of <b>97.5%own to 93.4%</b> and target input volume reduction of <b>4.1%</b> have been set. Review the water tariff structure to ensure it reflects true cost, promote WCWDM and work towards compliance with RPMS and improve IDP.</p>   |                |                 |            |                         |                |                        |
| Business Plan  |                |                 |            |                         |                |                        |
| The budget requirements for the next five years are summarised in the table below:   |                |                 |            |                         |                |                        |

## WCWDM STRATEGY : Qualitative Scorecard

| Municipality Name  |   | Mutale   |   |      |  |          |
|--|---|--|---|------|--|----------|
| Introduction   |   |  |   |      |  |          |
| The purpose of this section is to perform a qualitative evaluation of the municipality's water business. The objectives are as follows : |   |  |   |      |  |          |
| SWOT Analysis  |   | External - Opportunities<br>Positive external conditions which you don't control which you could take advantage of | External - Threats<br>Negative conditions you don't control but could minimise their effects  |      |  |          |
| Internal - Strengths<br>Positive aspects under your control and on which you may wish to capitalise                                      |   | Strengths and Opportunities (SO) –<br>Strategies that use strengths to maximize opportunities.                     | Strengths and Threats (ST) –<br>Strategies that use strengths to minimize threats.  |      |  |          |
| Internal - Weaknesses<br>Negative aspects under your control (to a large extent) which you could plan to improve                         |   | Weaknesses and Opportunities (WO) –<br>Strategies that minimize weaknesses by taking advantage of opportunities.   | Weaknesses and Threats (WT) –<br>Strategies that minimize weaknesses and avoid threats.   |      |  |          |
| ITEM   | CATEGORY  | STATUS QUO   |   | SWOT | STRATEGY   | PRIORITY |
| 1  | INSTITUTIONAL REVIEW  |  |   |      |  |          |
| 1.1  | Water and Sanitation department structure   |  |   |      |  |          |
| 1.1.1  | Is there an approved organogram for the Water and Sanitation Department?                            |  | There is no approved organogram   | W    |  | 1        |
| 1.1.2  | What is the vacancy rate in the department and is it a problem?                                     |  | Vacancy rate is very high - about 70% and the current staff is aged people who are not easily trained, all the operational and maintance staff is from the district.  | T    | Advertise and fill the identified critical vacant posts. Engage with the Department of finance to identify and explore possible funding options and budget requirements for the critical posts.  | 1        |
| 1.1.3  | Does the department have the correct technical skills for the correct posts.                        |  | The department is semi skilled it is indeed of technically qualified personnel within the municipality, the municipality is using staff from the DM and there is a service provider working on cost recovery.   |      |  |          |
| 1.1.4  | Is training and capacity building being done?   |  | The internal training is offered on adhock basis.   | O    | Institute a mandatory WC/WDM training programme for technical staff. Invest in team building and workshop sessions incorporating the councillors and municipal management to boost staff morale. |          |
| 1.1.5  | Are there sufficient support structures ito vehicles, equipment, materials etc.?                    |  | Some material is kept in stores such as pipes and fittings but spares for pumps and generators are problematic due to procurement issues, material is bought only after the faulty has been reported. Secondly the shortage of vehicles is the serious concern, out of 4 water tankers 2 is broken. | T    | Institute a mandatory WC/WDM training programme for technical staff. Invest in team building and workshop sessions incorporating the councillors and municipal management to boost staff morale. | 1        |
| 1.1.6  | Does the municipality own any water loss control equipment such as loggers, listening sticks, etc.? |  | No water loss equipment.  | O    | It is recommended that loggers and simple leak detection equipment be purchased to improve water loss monitoring and management in the system.   | 2        |

| ITEM       | CATEGORY  | STATUS QUO  | SWOT | STRATEGY   | PRIORITY |
|------------|---|---|------|--|----------|
| <b>1.2</b> | <b>Municipal support</b>  |   |      |  |          |
| 1.2.1      | Describe the working relationship with other departments such finance, planning, housing etc.?  | The relationship with internal finance department is fairly good but it becomes a challenge with the district finance department as they are in charge of procurement, orders are taking long to be approved. | O    | The positive relationship between these departments should be utilised to improve water loss management. Water sales can be requested on a monthly basis from finance in order to compile and more effectively monitor the NRW.                                | 2        |
| 1.2.2      | Are the politicians supporting the department?  | Politicians do support but they need more training on water business.   | O    | Plan a workshop session with the local councillors comprising an introduction to WC/WDM.   | 3        |
| <b>1.3</b> | <b>Public Private Partnerships</b>  |   |      |  |          |
| 1.3.1      | Is there any major industrial or institutional role player in the area and is there co-operation? (i.e. Mines or industries that impacts heavily on the municipalities existence) | There is one major role player within Mutale (Tsikondeni Mines)   | O    | Identify any other additional role players through the top consumer monitoring and conduct courtesy visits as a first phase of the programme. Establish a stakeholder forum if practicable and encourage the participation of the big industries in the forum. | 3        |
| 1.3.2      | If yes, what does the co-operation involve and can it be expanded?  | Tsikondeni Mines is helping the municipality by supplying water to 1 of the villages.   | S    | Improve the existing relationship with the Tsikondeni and expand the initiative to other areas.  | 3        |
| <b>1.4</b> | <b>Legislation and bylaws</b>   |   |      |  |          |
| 1.4.1      | Does the municipality have a customer service charter?  | No customer service charter in place  | O    | Develop a customer service charter to ensure the customers are aware of the municipalities commitment and their responsibilities as consumers.   | 2        |
| 1.4.2      | What is the status and age of the existing bylaws and do they address water loss management?  | Water bylaws that are used is from the district but the credit control policy is from the LM.   | S    | Periodically review the credit control policy and ensure they encapsulate the latest developments and continue to promote WC/WDM.  | 2        |
| 1.4.3      | Are bylaws enforced and if not, why not?  | Bylaws are enforced e.g.. Water restrictions to all non payers and only provide 200l/day.   | O    |  |          |
| 1.4.4      | What is the status and age of Water Services Development Plan?  | Only IDP in place.  | S    | Continuously update the IDP on an annual basis.  | 1        |
| <b>2</b>   | <b>FINANCIAL REVIEW</b>   |   |      |  |          |
| <b>2.1</b> | <b>Financial Department</b>   |   |      |  |          |
| 2.1.1      | What is your opinion of the Finance Department's ability to perform metering and billing  | The billing process is accurate and the municipality is in a process of upgrading the software to make it to be user friendly.  | S    | Improve access to the billing information and utilise the effectiveness of the billing system to monitor and track NRW.  | 2        |
| 2.1.2      | Is training and capacity building being done?   | Training is being done, the service provider has the service agreement to empower the internal staff members and locals.  | O    | Plan a WC/WDM workshop for the finance personnel to facilitate an improved understanding of the technical issues and information requirements.   | 1        |
| 2.1.3      | What is the state of the municipal metering and billing system?   |   |      |  |          |
| 2.1.4      | What is your primary source of funding?   | MIG, internal revenue and funding from the district   | O    | Focus on improving metering and billing of new developments and cost recovery to reduce dependency on grant funding.   | 3        |
| <b>2.2</b> | <b>Tariffs</b>  |   |      |  |          |
| 2.2.1      | Who prepares the water tariffs and what is it based on?   | Finance department prepares water tariffs and technical has an input.   | O    | Obtain National Treasury tariff guidelines and review tariffs.   | 1        |

| ITEM     | CATEGORY  | STATUS QUO  | SWOT | STRATEGY  | PRIORITY |
|----------|---|---|------|---|----------|
| 2.2.2    | What is the tariff structure and does it promote WCWDM?                                     | Flat tariffs is being used at 3.69 per KI and give 5% discount for air turning the meter  | W    | Review the current tariff structure. Institute a rising block tariff sufficiently differentiated in cost at each level to promote WC/WDM.   | 1        |
| 2.2.3    | Is the water supplied considered affordable by the customers?                               | Most consumers considers the current tariff as affordable, but in certain areas only few are saying it is expensive.  | S    | Continue ensuring that the tariffs remain affordable particularly for the efficient and low income water users.   | 3        |
| 2.3      | <b>Meter Reading and Billing</b>  |   |      |   |          |
| 2.3.1    | Who performs the water meter readings, frequency and accuracy?                              | The service provider manager all cost recovery programmes.  | T    | Monitor the frequency and accuracy of meter reading through the customer complaints system.   | 1        |
| 2.3.2    | Are the meter readers trained and can they report leakage when encountered on site?         | Meter reader are trained and they do report leaks as the walk the streets.  | S    | Continue providing training for the meter readers on an annual basis particularly on site training based on feedback from the consumers.  | 3        |
| 2.3.3    | Is the water bill understandable and informative?   | Yes it is informative but it can still improve.   | O    | Consider including water conservation tips and information in the water bill. It is also recommended to display 6 months graphical consumption data on the bill to aid consumers in effectively monitoring water use.     | 2        |
| 2.4      | <b>Credit control</b>   |   |      |   |          |
| 2.4.1    | Is credit control being implemented and by whom?  | Yes, It is implemented by the service provider  | S    | Capitalise on the relationship with the councillors and the community and ensure that the areas that are not yet metered are metered and billed to increase revenue water.  | 3        |
| 2.4.2    | What is the current level of non-payment?   | It has dropped from 60% to 40% and the collection went up to above R200000 in each month.   |      |   |          |
|          |   |   |      |   |          |
| <b>3</b> | <b>SOCIAL REVIEW</b>  |   |      |   |          |
| 3.1      | <b>Customer profile</b>   |   |      |   |          |
| 3.1.1    | Describe the general consumer profile i.e. Income levels, indigence, unemployment, literacy | There is a high level of unemployed within the villages, above 80% of the population is indigents.  | O    | The existing relationship should be improved on and utilised to increasingly promote water conservation.  | 2        |
| 3.1.2    | Describe the relationship between customers and the municipality and reasons?               | Relationship is very good and there is only few of the paying consumers that wants the municipality to remove the communal stand pipes.   | S    | The community awareness must become an annual on-going programme to make an impact. It can be monitored through KAP surveys conducted biannually in order to determine effectiveness and pertinent water services issues. | 2        |
| 3.2      | <b>Customer awareness</b>   |   |      |   |          |
| 3.2.1    | Are consumers informed regarding the value of water?  | Consumers are informed during the meetings with tribal authorities especially in some villages where there is no water tankers to bring water everyday.   | S    | Continue informing communities and ensuring that the customer care line is continuously publicised to further encourage reporting of leakage.   | 2        |
| 3.2.2    | What is the level of leakage reporting by the community and what method do they use?        | Leakages are very high in Masisi due to illegal connections, communities calls the municipality offices to report leaks and also informs tribal authorities and the response rate from the municipality is very slow to repair leaks due to the shortage of transport . | W    | Publicise the customer care services through the, tribal authorities and councillors, pamphlets attached to water bills and local media to promote reporting of leakage.  | 1        |

| ITEM  | CATEGORY  | STATUS QUO  | SWOT | STRATEGY   | PRIORITY |
|-------|---|---|------|--|----------|
| 3.2.3 | What are the most prominent consumer behavioural challenges encountered by the municipality?          | A very high level of vandalism on boreholes and cables at pump stations | W    | The community awareness campaign should be tailored to address these problems. The councillors and tribal authorities should be encouraged to make these issues an agenda at all public metering held in the different wards.  | 1        |
| 3.2.4 | Is xeriscaped gardening and rain water harvesting encouraged?   | No rain water harvesting taking place.                                  | O    | As part of a community awareness campaign, encourage consumers to harvest rain water and utilise it for garden irrigation and cleaning to reduce the demand for potable water.   | 3        |
| 3.2.5 | Are radio campaigns, bill board, pamphlets, informative billing used to inform and educate customers? | None  |      |  |          |
| 3.3   | <b>Schools awareness</b>  |   |      |  |          |
| 3.3.1 | Number of primary and secondary schools?  |   |      |  |          |
| 3.3.2 | Frequency and scope of schools awareness campaigns?   | None  | O    | Establish a relationship with schools. Monitor their consumption on a monthly basis and undertake education and awareness. Huge benefit can be derived from this. The section 21 schools in particular should be visited, monitored and encouraged to fix leakage as the O&M budgets are operated by the school management for this category of schools. Engage with the schools through workshops and promote water conservation in the education sector. | 1        |
| 3.3.3 | Are goals and objectives monitored and controlled?  |   |      |  |          |
| 3.4   | <b>Customer Care Centre</b>   |   |      |  |          |
| 3.4.1 | Does the municipality have a CCC and who operates it?   |   |      |  |          |
| 3.4.2 | How and to whom are billing queries referred?   |   |      |  |          |
| 3.4.3 | To whom are the leak reports referred and do consumers have confidence in the reporting system?       |   |      |  |          |
|       |   |   |      |  |          |

| ITEM       | CATEGORY  | STATUS QUO   | SWOT     | STRATEGY   | PRIORITY |
|------------|---|--|----------|--|----------|
| <b>4</b>   | <b>TECHNICAL REVIEW</b>   |  |          |  |          |
| <b>4.1</b> | <b>Measurement and control</b>  |  |          |  |          |
| 4.1.1      | Is the system input volume measured, monitored and controlled?                                | Main reservoirs are metered but reservoirs to different areas are 50% metered and the raw water to the purification plant is not metered.                        | <b>W</b> | Due to the frequency of overflowing reservoirs, a telemetry system is recommended to monitor activity at the reservoirs.   | <b>1</b> |
| 4.1.2      | Is the water supply system sectorised into zones and districts?                               | The system is not sectorised.  | <b>W</b> | The water supply system must be sectorised into manageable sized areas to allow for improved monitoring.   | <b>1</b> |
| 4.1.3      | Are the supply to the zones and districts metered?  |  |          |  |          |
| 4.1.4      | Is the system monitored through a telemetry system?   | The telemetry system is not working anymore.   | <b>W</b> | Due to the frequency of overflowing reservoirs, a telemetry system is must be replaced or repaired to monitor activity at the reservoirs.  | <b>1</b> |
| 4.1.5      | What is the Frequency and detail of your water balance calculation?                           |  |          |  |          |
| 4.1.6      | Are minimum night flows, consumption trends and logging used to monitor the system?           | No minimum night flow analysis.  | <b>T</b> | Obtain and install logging equipment periodically on the bulk meters and conduct MNF analysis to determine leakage levels and areas experiencing high or low pressures.                    | <b>1</b> |
| 4.1.7      | Are monthly management reports prepared and key performance indicators measured?              | Monthly management reports are not done, only the cost recovery reports are being generated on monthly basis.  | <b>O</b> | Prepare monthly reports on the NRW KPI's   | <b>2</b> |
| <b>4.2</b> | <b>Physical leakage</b>   |  |          |  |          |
| 4.2.1      | What is the average age of the network, pipe material, replacement programme?                 | The network is very old, AC pipes.   | <b>T</b> | Set aside 5% of the CAPEX budget for the replacement of the network.   | <b>2</b> |
| 4.2.2      | Number of burst pipes reported and repaired per week / month and the average response time?   | About 10 pipe bursts per week and the response time can be long due to lack of materials   | <b>T</b> | The response time of 48hrs must be maintained and continuously improved upon.  | <b>2</b> |
| 4.2.3      | What is the primary cause of burst pipes?   | Mainly due to aging network, trees growing over the pipes and high pressures in some areas as well as the poor 350mm uPVC pipe class that was installed in 2007. | <b>O</b> | Allocate a proper budget for replacement and refurbishment. Budget a minimum of 5% of the infrastructure value for this purpose to reduce the risk of system failure.                      | <b>3</b> |
| 4.2.4      | Are active leak detection programmes conducted?   | No leak detection programmes in place.   | <b>W</b> | Conduct active leak detection bi annually (twice a year) through the existing contractor.  | <b>1</b> |
| 4.2.5      | How often and for how long do reservoirs overflow?  | Very often the reservoir overflow because of manual controls, there is someone monitoring reservoir on shift basis for 24hrs.                                    | <b>O</b> | Install a real time telemetry system to monitor activity at the reservoirs.  | <b>2</b> |
| 4.2.6      | Are water losses from treatment processes (backwash, etc.) monitored and minimised?           |  |          |  |          |
| 4.2.7      | Is leakage on private properties a problem and if so, why?                                    | Leakages in private properties is a major problem, it is mainly due to leaking toilets and broken taps.  | <b>O</b> | Undertake a leak audit as part of the community awareness campaign and determine the extent of internal plumbing leakage. Consider repairing leaks on indigent properties to decrease NRW. | <b>3</b> |
| 4.2.8      | Are leaks on indigent private properties repaired and removal of wasteful devices encouraged? |  |          |  |          |
| <b>4.3</b> | <b>Pressure management and control valves</b>   |  |          |  |          |
| 4.3.1      | What is the average and maximum system pressure?  | Not sure   |          |  |          |
| 4.3.2      | Is basic or advanced pressure management being implemented?                                   | No pressure management in place.   | <b>O</b> | Install PRV's in critical areas experiencing high pressures and monitor on a monthly basis.  | <b>1</b> |
| 4.3.3      | Are control valves pro-actively being maintained to prevent overflowing reservoirs?           | Control valves are maintained once a month and also service some air valves to avoid air locks in the system.  | <b>S</b> | Existing control valves must be maintained or recommissioned to assist in the monitoring of reservoirs.  | <b>2</b> |

| ITEM  | CATEGORY   | STATUS QUO  | SWOT | STRATEGY  | PRIORITY |
|-------|--|---|------|---|----------|
| 4.4   | <b>Consumer metering</b>   |   |      |   |          |
| 4.4.1 | Are domestic and non-domestic consumers metered and which type of meter is used? | Most consumers are metered +- 6040 now compared to 1000 in 2008 and types of meters are Aqualoc and Kent meters | O    | Meter and bill 100% of non domestic connections as a priority and increasingly meter and bill the domestic consumers where practicable to increase revenue water.                 | 2        |
| 4.4.2 | What is the condition, age and accuracy of water meters?                         | Some meters are as old as the town and they may not be accurate.  | O    | Allocate a significant budget and implement a meter replacement programme particularly for bulk and non domestic consumers as a first phase of replacement.                       | 1        |
| 4.4.3 | Are the top consumers pro-actively monitored on a monthly basis?                 | Top consumers are monitored on monthly basis.   | S    | Maintain monthly monitoring of top non domestic consumers. Undertake a top consumer audit and ensure that all connections are metered and billed.                                 | 1        |
| 4.4.4 | Describe the water quality and its impact on consumer water meters?              | Water quality is fairly good though in some boreholes in Niani is salty.  |      |   |          |
| 4.4.5 | What is the prevalence and control of illegal connections?                       | In Masisi and surrounding areas fines are given to people who are connecting illegally.                         | O    | Undertake an illegal connection removal programme. Consider an amnesty programme where consumers with unlawful connections can come forward and report without prosecution.       | 1        |
| 4.5   | <b>Management information</b>  |   |      |   |          |
| 4.5.1 | Does the Municipality have an asset register and asset management programme?     | The asset register is with the district office.   | W    | Obtain an electronic asset management programme and institute an asset management programme. Utilise indigent community members to locate and clean the municipal infrastructure. | 2        |
| 4.5.2 | What is the status and age of as-built drawings?                                 | There are no as built drawings.   | T    | Develop digital copies of the remainder of the network.   | 2        |
|       |  |   |      |   |          |

| SWOT Analysis   | Helpful  | Harmful  |
|---|--|--|
| <b>Internal factors</b><br><b>(Staff, infrastructure, tools, equipment)</b> | Credit control<br>Visible leaks are reported and fixed<br>Indigent consumer use is controlled  | Training and capacity building in WDM section<br>No water loss equipment<br>Positions are not filled<br>Electronic asset register required for engineering purposes<br>Limited asset management programme<br>Develop schools awareness campaign<br>Limited water resources<br>No approved organogram<br>Limited water supply to the villages<br>Not enough water tankers |
| <b>Internal factors</b><br><b>(Politics, finance, consumers, economics)</b> | Good relationship with finance but can improve<br>Supportive politicians and tribal authorities<br>Community appreciate value of water<br>Water tariffs do support WCWDM<br>Review water tariffs to cover costs<br>Review charters, policies and bylaws to promote WDM | Improved metering and billing required<br>High indigent consumer base  |

## WCWDM STRATEGY : Quantitative Scorecard

|                          |        |
|--------------------------|--------|
| <b>Municipality Name</b> | Mutale |
| <b>Introduction</b>      |        |

The purpose of the Water Conservation / Water Demand Management (WC/WDM) Scorecard is to ascertain the status quo of WC/WDM and evaluate the potential for WC/WDM measures to be implemented in these systems. The scorecard is also designed to enable the Regulator (Department of Water Affairs) to assess the current situation regarding losses and levels of wastage in all water supply systems countrywide. The scorecard consists of 25 multiple choice questions with each question getting scored from 0 to 4. The Regulator and WSA can track progress with each year the scorecard gets completed. Each question ends with an audit requirement which indicates what will be required by the Regulator should the questionnaire be audited. It also provides an indication on what is required in terms of each of the measures.

| Completed by   |        |  |  |         |

### Key questions from the Regulatory Performance Measurement System (RPMS) related to WC/WDM

| KPI   |  | ID     | WSA Value |
|---|--|--------|-----------|
| <b>KPI 1 – Access to Water</b>                          |  |        |           |
| <b>KPI 2 – Access to Sanitation</b>                     |  |        |           |
| <b>KPI 3 – Access to Free Basic Water</b>               |  |        |           |
|   | Total poor households receiving Free Basic Water for last financial year   | ID:012 |           |
|   | Total poor households  | ID:013 |           |
| <b>KPI 4 – Access to Free Basic Sanitation</b>          |  |        |           |
|   | Total poor households receiving Free Basic Sanitation for last financial year  | ID:014 |           |
|   | Total poor households  | ID:013 |           |
| <b>KPI 5 – Drinking Water Quality</b>                   |  |        |           |
| <b>KPI 6 –Wastewater Quality</b>                        |  |        |           |
| <b>KPI 7 - Customer Services Standards</b>              |  |        |           |
| <b>Component 1 – Service Interruptions</b>              |  |        |           |
|   | Total number of Service interruptions in the last financial year   | ID:034 |           |
|   | Number of interruptions in continuous service to consumers, where interruption for a single incident was greater than 24h  | ID:033 |           |
| <b>Component 2 – CRM Systems</b>                        |  |        |           |
|   | Does the WSA have a customer Charter   | ID:036 |           |
|   | Does the WSA have a customer service centre  | ID:035 |           |
|   | Is there a system to manage customer queries and log faults  | ID:038 |           |
|   | Does the incident tracking system escalate complaints if not responded to within a prescribed time?                        | ID:037 |           |
| <b>KPI 8 - Institutional Effectiveness</b>              |  |        |           |
| <b>Component 1 - Institutional Effectiveness</b>        |  |        |           |
|   | Completed WSDP is approved by Council for the last financial year?   | ID:039 |           |
|   | Required policies are in place and approved by Council?  | ID:040 |           |
|   | Required bylaws are in place and approved by Council?  | ID:041 |           |
|   | Contracts and Service level agreements in place with all appropriate service delivery role-players (WSPs, internal etc.)   | ID:042 |           |
|   | The WSA monitors the KPIs defined by the contract or SLA?  | ID:043 |           |
| <b>Component 2 - Water Services Staff Effectiveness</b> |  |        |           |
|   | Total Water Services staff costs for the last financial year   | ID:045 |           |
|   | Total cost of water and sanitation provision for the last financial year including interest and depreciation (expenditure) | ID:046 |           |
|   | Total budgeted for water services staff according to the approved organogram for the last financial year                   | ID:078 |           |
| <b>Component 3 - Grant Funding Effectiveness</b>        |  |        |           |
|   | Total grant funding allocation received for the last financial year  | ID:048 |           |
|   | Total grant funding allocation spent for the last financial year   | ID:047 |           |
| <b>Component 4 - WSA Annual Report</b>                  |  |        |           |
|   | WSA annual report submitted to Minister  | ID:077 |           |
| <b>Component 5 - % Filled Posts on Organogram</b>       |  |        |           |
|   | Total number of posts on Council-approved organogram for the last financial year for water services staff                  | ID:080 |           |
|   | Total number of posts filled on the approved water services organogram in the last financial year                          | ID:079 |           |

|  |  |         |  |
|--|--|---------|--|
| <b>KPI 9 - Financial Performance</b>                                 |  |         |  |
| <b>Component 1 – Financial Integrity</b>                             |  |         |  |
|  | Is WSA ring-fenced? (Separate legal entity=3, Separate accounting entity=2, Partially ring-fenced=1, Not ring-fenced at all=0) | ID:049  |  |
|  | Audit report evaluation. (Unqualified=4, Qualified=3, Adverse=2, Disclaimer=1, No report=0)                                    | ID:050  |  |
| <b>Component 2 – Average Debtor Days</b>                             |  |         |  |
|  | Water Services sales income for the last financial year (water/sanitation)   | ID:052  |  |
|  | Total outstanding customer/consumer debt for water and sanitation for the last financial year                                  | ID:051  |  |
| <b>Component 3 – Revenue Collection Effectiveness</b>                |  |         |  |
|  | Water Services sales income for the last financial year (water/sanitation)   | ID:052  |  |
|  | Water Services billed income actually received from consumers for last financial year  | ID:053  |  |
| <b>Component 4 – Average Creditor Days</b>                           |  |         |  |
|  | Total bulk water purchases for the last financial year   | ID:055  |  |
|  | Total bulk water accounts outstanding for the last financial year  | ID:054  |  |
| <b>Component 5 – Financial Sustainability</b>                        |  |         |  |
|  | Total water and sanitation income for the last financial year  | ID:056  |  |
|  | Total cost of water and sanitation provision for the last financial year including interest and depreciation (expenditure)     | ID:046  |  |
| <b>Component 6 – Financial Effectiveness</b>                         |  |         |  |
|  | Total outstanding customer/consumer debt (after provisions) for water and sanitation for the last financial year               | ID:051  |  |
|  | Total provision for doubtful debt for water and sanitation for the last financial year   | ID:082  |  |
| <b>KPI 10 Strategic Asset Management</b>                             |  |         |  |
| <b>Component 1 - Capital Spent on Rehabilitation and Replacement</b> |  |         |  |
|  | Total capital budget (Water and Sanitation) in the last financial year   | ID:063  |  |
|  | Total capital spent on refurbishment and replacement in the last financial year  | ID:062  |  |
| <b>Component 2 –Asset Management Effectiveness</b>                   |  |         |  |
|  | Asset management plan status   | ID:057  |  |
|  | Asset register status  | ID:058  |  |
|  | Asset management system is electronic  | ID:059  |  |
| <b>Component 3 – O&amp;M Expenditure</b>                             |  |         |  |
|  | Total spent on O&M/Annual maintenance cost (Water and Sanitation) in the last financial year                                   | ID:060  |  |
|  | Replacement value of assets (water services infrastructure)  | ID:061  |  |
| <b>Component 4 – Replacement Saving</b>                              |  |         |  |
|  | Depreciation value for the last financial year (Water and Sanitation infrastructure)   | ID:065  |  |
|  | Contribution to asset replacement fund for the last financial year. (Water and Sanitation)                                     | ID:064  |  |
| <b>Component 5 – Asset Register Monitoring</b>                       |  |         |  |
|  | Asset register field monitored: Date acquired  | ID:066  |  |
|  | Asset register field monitored: Estimated remaining life of asset  | ID:068  |  |
|  | Asset register field monitored: Replacement value of asset   | ID:070  |  |
|  | Asset register field monitored: Purchase cost of asset   | ID:069  |  |
|  | Asset register field monitored: Description of asset (Yes/No)  | ID:067  |  |
| <b>KPI 11 Water Demand Management</b>                                |  |         |  |
|  | System input volume (external sources) for the last financial year   | ID:121  |  |
|  | System input volume (own sources) for the last financial year  | ID:122  |  |
|  | Total billed metered water consumption (volume) for the last financial year  | ID:071  |  |
|  | Total billed unmetered water consumption (volume) for the last financial year  | ID:074  |  |
|  | Total unbilled metered water consumption (volume) for the last financial year  | ID: 073 |  |
|  | Total unbilled unmetered water consumption (volume) for the last financial year  | ID: 123 |  |
| <b>ADDITIONAL QUESTIONS FOR WATER USE EFFICIENCY</b>                 |  |         |  |

|                                     |  |         |  |
|-------------------------------------|--|---------|--|
|                                     | Water Conservation and Water Demand Management plan  |         |  |
|                                     | Installation of water efficient devices  |         |  |
|                                     | Repair of leaks  |         |  |
|                                     | Measurement or control of water supplied   |         |  |
|                                     | Pressure management  |         |  |
| <b>Additional KPI : Tariff Data</b> |  |         |  |
|                                     | Which of the listed elements are taken into account when you determine your tariff? Indicate from the list provided                  | ID: 201 |  |
|                                     | Total amount of subsidies allocated to water for the next financial year   | ID: 202 |  |
|                                     | Total projected cost of water provision for the next financial year  | ID: 203 |  |
|                                     | Does your tariff recognise the difference between levels of service (according to Regulation 4 under s10 of the Water Services Act)? | ID: 204 |  |
|                                     | Does your tariff recognise the difference between socio-economic status of customers (according to s10 of the Water Services Act)?   | ID: 205 |  |
|                                     | Do you charge a rising block tariff?   | ID: 206 |  |
|                                     | How many blocks are in your tariff structure?  | ID: 207 |  |
|                                     | What is your approved standard tariff? (Basic levy)  | ID: 208 |  |
|                                     | What are the actual 2010/2011 tariffs for the following consumer categories?   | ID: 209 |  |
|                                     | Do you reflect your tariff structure on your bill?   | ID: 210 |  |
|                                     | What are the quantities of water supplied to the following consumer categories (annually)?   | ID: 211 |  |
|                                     | What is the unit number of consumers served with water in each consumer category?  | ID: 212 |  |
|                                     | Do you have a seasonal tariff in your WSA?   | ID: 213 |  |
|                                     | Does your tariff include a fixed charge?   | ID: 214 |  |
|                                     | If a fixed charge is levied, do you subsidise the FBW?   | ID: 215 |  |
|                                     | What other sources of water services revenue (other than tariffs) does your WSA have? Indicate sources on the list provided          | ID: 216 |  |
|                                     | Total annual water services surplus / deficit  | ID: 217 |  |

| Executive summary  |                                    |                 |            |                         |                |                        |
| Status quo   |                                    |                 |            |                         |                |                        |
| <p>Limited WCWDM activities are undertaken in the WSP and there is little management information available to perform a proper assessment of the water losses and potential savings. The assessment is inline with RPMS, Drop assessments and the WSDP.</p> <p>Most of the towns are informal with formal infrastructure in a relatively smaller area within the municipality which enables limited metering, billing and cost recovery in the WSP. The current metering, billing and cost recovery systems are inadequate.</p> <p>The engineering departments in the Local Municipalities are characterised by high vacancies and low capacity and skills.</p> <p>The current estimated unit consumption of <b>182 l/c/d</b> is acceptable but limited further reduction is expected as it will go towards improved LOS and redistribution.</p> <p>The relationship with the community is generally positive and the communities themselves are characterised by high unemployment and a large indigent population. The water tariffs do not promote WCWDM and is not cost reflective and consumers do not value water very much.</p> |                                    |                 |            |                         |                |                        |
| Strategy   |                                    |                 |            |                         |                |                        |
| <p>The municipality should focus on proper recording keeping, analysis and development of detailed management information. All vacancies must be filled as a matter of priority together with skills transfer and capacity building. The engineering and finance department must work closer together to improve metering, billing and cost recovery and start with a meter audit to resolve the high NRW. A steering committee should be setup to report on a monthly basis to council on water loss figures, leaks repaired, targets, progress, consumer metering, billing and cost recovery.</p> <p>Proper metering, billing and cost recovery should be supported by community awareness that promotes reporting of leaks, fixing of private leaks and efficient use. Based on the estimated available information, a target reduction in NRW of <b>60.2%</b> down to <b>50.1%</b> and target input volume reduction of 5% have been set. The water tariff structure does not promote WCWDM and is not based on a proper analysis. The municipality should work towards RPMS compliance and improvement of their IDP.</p>          |                                    |                 |            |                         |                |                        |
| Business Plan  |                                    |                 |            |                         |                |                        |
| The budget requirements for the next five years are summarised in the table below:   |                                    |                 |            |                         |                |                        |

## WCWDM STRATEGY : Qualitative Scorecard

| Municipality Name  |  | Thulamele  |  |      |  |          |
|--|--|--|--|------|--|----------|
| Introduction   |  |  |  |      |  |          |
| The purpose of this section is to perform a qualitative evaluation of the municipality's water business. The objectives are as follows : |  |  |  |      |  |          |
| SWOT Analysis  |  | External - Opportunities<br>Positive external conditions which you don't control which you could take advantage of   | External - Threats<br>Negative conditions you don't control but could minimise their effects |      |  |          |
| Internal - Strengths<br>Positive aspects under your control and on which you may wish to capitalise                                      |  | Strengths and Opportunities (SO) –<br>Strategies that use strengths to maximize opportunities.   | Strengths and Threats (ST) –<br>Strategies that use strengths to minimize threats.           |      |  |          |
| Internal - Weaknesses<br>Negative aspects under your control (to a large extent) which you could plan to improve                         |  | Weaknesses and Opportunities (WO) –<br>Strategies that minimize weaknesses by taking advantage of opportunities.   | Weaknesses and Threats (WT) –<br>Strategies that minimize weaknesses and avoid threats.      |      |  |          |
| ITEM   | CATEGORY   | STATUS QUO   |  | SWOT | STRATEGY   | PRIORITY |
| 1  | INSTITUTIONAL REVIEW   |  |  |      |  |          |
| 1.1  | Water and Sanitation department structure  |  |  |      |  |          |
| 1.1.1  | Is there an approved organogram for the Water and Sanitation Department?         | There is an approved organogram in place. There is sufficient capacity but it is not effective in undertaking the necessary tasks.                           |  | O    | Review the existing organogram and ensure that it incorporates WC/WDM personnel in consultation with the District.   |          |
| 1.1.2  | What is the vacancy rate in the department and is it a problem?                  | There is a 5% vacancy rate in O&M and 10% at management level. Most of the current staff particularly at the management level are acting in their positions. |  | T    | Engage with the District and advertise and fill the identified critical vacant posts. Engage with the Department of finance at the District Level to identify and explore possible funding options and budget requirements for the critical posts. |          |
| 1.1.3  | Does the department have the correct technical skills for the correct posts.     | The O&M level is correctly skilled however the skills are lacking at the managerial level.   |  | T    | Increase management, and O&M capacity through new human resources and support it with WC/WDM training.   |          |
| 1.1.4  | Is training and capacity building being done?                                    | Some managerial training is provided however no other training is being done. There are intentions to do some training on O&M.                               |  | O    | Institute a mandatory WC/WDM training programme for technical staff. Invest in team building and workshop sessions incorporating the councillors and municipal management to boost staff morale.   |          |
| 1.1.5  | Are there sufficient support structures ito vehicles, equipment, materials etc.? | The funding is available but planning is lacking. This is further compounded by the transfer issues related to the District taking over the WSA function.    |  | S    | Continue to allocate an adequate budget for the critical spares. Allocate a specific person who will be responsible for expediting equipment orders and managing quality control in terms of the procurement process.                              |          |

| ITEM  | CATEGORY  | STATUS QUO  | SWOT | STRATEGY   | PRIORITY |
|-------|---|---|------|--|----------|
| 1.1.6 | Does the municipality own any water loss control equipment such as loggers, listening sticks, etc.? | No.   | O    | It is recommended that loggers and simple leak detection equipment be purchased to improve water loss monitoring and management in the system.   | 3        |
| 1.2   | <b>Municipal support</b>  |   |      |  |          |
| 1.2.1 | Describe the working relationship with other departments such finance, planning, housing etc.?      | The relationship with other departments is fair but there is room for improvement. The relationship with the finance department specifically is good. | O    | Establish a NRW steering committee comprising representatives from the technical, communications and finance departments to improve communication and access to information.   | 1        |
| 1.2.2 | Are the politicians supporting the department?  | The politicians are very supportive and they do understand the water business.  | O    | Undertake a councillor WC/WDM induction programme to capitalise on the existing relationship and build a communication bridge between the municipality and the customers.  | 2        |
| 1.3   | <b>Public Private Partnerships</b>  |   |      |  |          |
| 1.3.1 | Is there any major industrial or institutional role player in the area and is there co-operation?   | The CSIR is a potential partner in the area. They can be engaged to assist with the package plants.   | O    | Identify any other additional role players through the top consumer monitoring and conduct courtesy visits as a first phase of the programme. Establish a stakeholder forum if practicable and encourage the participation of the big industries in the forum. | 3        |
| 1.3.2 | If yes, what does the co-operation involve and can it be expanded?                                  |   |      |  |          |
| 1.4   | <b>Legislation and bylaws</b>   |   |      |  |          |
| 1.4.1 | Does the municipality have a customer service charter?  | The information required for the charter is captured in 3 documents which will be made public. This is in the process of being developed.             | O    | Develop a customer service charter to ensure the customers are aware of the municipality's commitment and their responsibilities as consumers.   | 3        |
| 1.4.2 | What is the status and age of the existing bylaws and do they address water loss management?        |   |      |  |          |
| 1.4.3 | Are bylaws enforced and if not, why not?  |   |      |  |          |
| 1.4.4 | What is the status and age of Water Services Development Plan?                                      |   |      |  |          |
| 2     | <b>FINANCIAL REVIEW</b>   |   |      |  |          |
| 2.1   | <b>Financial Department</b>   |   |      |  |          |
| 2.1.1 | What is your opinion of the Finance Department's ability to perform metering and billing            | The finance department is effective in carrying out their activities.   | O    | Improve communication and access to information between the technical and finance department through scheduled monthly team meetings in order to fully utilise this resource.  | 1        |
| 2.1.2 | Is training and capacity building being done?   | There is some training provided for the department.   | O    | Plan a WC/WDM workshop for the finance personnel and meter readers to facilitate an improved understanding of the technical issues and information requirements.   | 2        |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY   | PRIORITY |
|-------|---|--|------|--|----------|
| 2.1.3 | What is the state of the municipal metering and billing system?                     | The state of billing is improving but there are 40 000 unmetered connections. There are also a lot of communal taps.   | O    | Obtain billed metered consumption from the finance department on a monthly basis and monitor water sales. Meter and bill 100% of non domestic connections as a priority and increasingly meter and bill the domestic consumers where practicable to increase revenue water.  | 1        |
| 2.1.4 | What is your primary source of funding?   | Internal revenue and Grant funding.  | O    | Focus on improving cost recovery to continuously reduce dependency on grant funding.   | 2        |
| 2.2   | <b>Tariffs</b>  |  |      |  |          |
| 2.2.1 | Who prepares the water tariffs and what is it based on?                             | The technical and finance department develop the tariffs.  | T    | Ensure that the technical department makes inputs into the tariff setting process to ensure that the tariffs are feasible for the municipality and the consumers. Institute a rising block tariff sufficiently differentiated in cost at each level to promote WC/WDM with the highest tariff at least double the lowest tariff. | 2        |
| 2.2.2 | What is the tariff structure and does it promote WCWDM?                             | There is a step tariff in place. The tariffs have recently been revised however the cost of water does not adequately cater for the cost of service provision. | T    | Review the current tariff structure. Institute a rising block tariff sufficiently differentiated in cost at each level to promote WC/WDM with the highest tariff at least double the lowest tariff.  | 2        |
| 2.2.3 | Is the water supplied considered affordable by the customers?                       | The water is considered affordable.  | S    | Continue ensuring that the tariffs remain affordable particularly for the efficient and low income water users.  | 2        |
| 2.3   | <b>Meter Reading and Billing</b>  |  |      |  |          |
| 2.3.1 | Who performs the water meter readings, frequency and accuracy?                      | The technical department is in charge of meter reading.  | S    | Monitor the frequency of meter reading and customer complaints of inaccurate billing to determine the effectiveness of the meter readers.  | 2        |
| 2.3.2 | Are the meter readers trained and can they report leakage when encountered on site? | Yes.   | O    | Continue to provide training for the meter readers on an annual basis particularly on site training based on feedback from the consumers.  | 2        |
| 2.3.3 | Is the water bill understandable and informative?                                   | Yes.   | O    | Consider including water conservation tips and information in the water bill. It is also recommended to display 6 months graphical consumption data on the bill to aid consumers in effectively monitoring water use.  | 3        |
| 2.4   | <b>Credit control</b>   |  |      |  |          |
| 2.4.1 | Is credit control being implemented and by whom?                                    | Credit Control is being implemented very effectively by the department of finance.   | O    | Capitalise on the effective credit control and ensure that the areas that are not yet metered are metered and billed to increase revenue water.  | 3        |
| 2.4.2 | What is the current level of non-payment?   | The level of non payment is currently approximately 30%.   | O    | Focus on promoting payment for services in the township areas through the councillors and education and awareness. Improve the quality of service through obtaining proper management information and monitoring the zones on a monthly basis.   | 1        |
| 3     | <b>SOCIAL REVIEW</b>  |  |      |  |          |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY   | PRIORITY |
|-------|---|--|------|--|----------|
| 3.1   | <b>Customer profile</b>   |  |      |  |          |
| 3.1.1 | Describe the general consumer profile i.e. Income levels, indigence, unemployment, literacy           | 80% of the consumers are indigent. There are a few high income consumers however the majority is low income.   | O    | Focus on educating the indigent population on efficient water use and the importance of the free basic allocation as well as its limitations.  | 1        |
| 3.1.2 | Describe the relationship between customers and the municipality and reasons?                         | The relationship is contentious due to the frequent water cut offs and the restriction of water in cases of non payment. The consumers are currently on intermittent supply. | T    | Engage with the consumers through the councillors and gain their support and cooperation whilst the municipality resolves the water services challenges. Build on the relationship with all the consumers and strengthen it through community awareness campaigns. | 1        |
| 3.2   | <b>Customer awareness</b>   |  |      |  |          |
| 3.2.1 | Are consumers informed regarding the value of water?  | The consumers don't value water.   | T    | Budget and undertake a continuous annual education and awareness campaign focusing on promoting water use efficiency.  | 1        |
| 3.2.2 | What is the level of leakage reporting by the community and what method do they use?                  | The community generally doesn't report leakage.  | O    | Make one number available for the reporting of leaks. Publicise the number and ensure that the leak reports are captured in an electronic system to aid more effective tracking of the leakage and to promote reporting by the community.                          | 2        |
| 3.2.3 | What are the most prominent consumer behavioural challenges encountered by the municipality?          | Illegal connections, vandalism and theft of borehole pumps and transformers as well as brass taps are the main behavioural challenges faced by the municipality              | T    | The community awareness campaign should be tailored to address these problems. The councillors should be encouraged to make these issues an agenda at all public metering held in the different wards.   | 2        |
| 3.2.4 | Is xeriscaped gardening and rain water harvesting encouraged?   | No.  | O    | As part of a community awareness campaign, encourage consumers to harvest rain water and utilise it for garden irrigation and cleaning to reduce the demand for potable water.   | 2        |
| 3.2.5 | Are radio campaigns, bill board, pamphlets, informative billing used to inform and educate customers? | No.  | O    | Develop simple visual material in the form of pamphlets which can be used to educate consumers on efficient water use. Build on the media campaign undertaken and periodically publicise water tips on local radio stations and newspapers.                        | 2        |
| 3.3   | <b>Schools awareness</b>  |  |      |  |          |
| 3.3.1 | Number of primary and secondary schools?  | more than 200 schools.   | O    | Huge benefit can be derived from the expansion of the schools programme. The section 21 schools in particular should be visited, monitored and encouraged to fix leakage as the O&M budgets are operated by the school management for this category of schools.    | 3        |
| 3.3.2 | Frequency and scope of schools awareness campaigns?   | N/A  |      |  |          |
| 3.3.3 | Are goals and objectives monitored and controlled?  | No   | O    | Establish a relationship with schools. Monitor their consumption and undertake education and awareness.  | 3        |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY  | PRIORITY |
|-------|---|--|------|---|----------|
| 3.4   | Customer Care Centre  |  |      |   |          |
| 3.4.1 | Does the municipality have a CCC and who operates it?   | No.  | O    | Obtain trained individuals to receive and refer customer complaints and establish a customer care land line. Publicise the call centre and encourage the consumers to become the eyes and ears of the municipality and to report water and sanitation related problems. | 2        |
| 3.4.2 | How and to whom are billing queries referred?   | The people call the operations and maintenance manager to report leaks. There is a job card system which is both electronic and manual. A proper capturing system is however required. | O    | Obtain an electronic system to capture and monitor the queries referred and to track the resolution of the queries.   | 2        |
| 3.4.3 | To whom are the leak reports referred and do consumers have confidence in the reporting system? |  |      |   |          |

| ITEM       | CATEGORY  | STATUS QUO  | SWOT     | STRATEGY   | PRIORITY |
|------------|---|---|----------|--|----------|
| <b>4</b>   | <b>TECHNICAL REVIEW</b>   |   |          |  |          |
| <b>4.1</b> | <b>Measurement and control</b>  |   |          |  |          |
| 4.1.1      | Is the system input volume measured, monitored and controlled?                              | There are bulk are meters in place , the SIV information is available.  | <b>S</b> | Read bulk meters on a monthly basis and continue to monitor input volumes.   | <b>1</b> |
| 4.1.2      | Is the water supply system sectorised into zones and districts?                             | Uncertain.  |          |  |          |
| 4.1.3      | Are the supply to the zones and districts metered?  |   |          |  |          |
| a          | Is the system monitored through a telemetry system?   | No.   | <b>O</b> | Obtain an appropriate real time telemetry system to improve the monitoring of the network.   | <b>2</b> |
| 4.1.5      | What is the Frequency and detail of your water balance calculation?                         | The calculations are not being done.  | <b>W</b> | Develop an NRW water balance which must be updated on a monthly basis to monitor water losses.   | <b>1</b> |
| 4.1.6      | Are minimum night flows, consumption trends and logging used to monitor the system?         | No.   | <b>O</b> | Obtain and install logging equipment periodically on the zone meters once they have been installed and conduct MNF analysis to determine leakage levels and areas experiencing high or low pressures.  | <b>3</b> |
| 4.1.7      | Are monthly management reports prepared and key performance indicators measured?            | There are daily readings being taken but no water balance calculations are conducted.   | <b>O</b> | Consolidate the available data from the bulk meters and department of finance and compile a monthly NRW report with the relevant KPI's.  | <b>1</b> |
| <b>4.2</b> | <b>Physical leakage</b>   |   |          |  |          |
| 4.2.1      | What is the average age of the network, pipe material, replacement programme?               | There are a few new pipes however most of them are more than 20 years old. They are mainly asbestos cement. There is currently no replacement programme in place. | <b>T</b> | Set aside 5% of the CAPEX budget for the replacement of the network.   | <b>1</b> |
| 4.2.2      | Number of burst pipes reported and repaired per week / month and the average response time? | Pipe bursts are taking place on a daily basis. The average response time is 8hrs for pipe bursts and 48hrs for pipe connection leakage.                           | <b>S</b> | Continue to monitor the frequency of pipe bursts. Ensure that all pipe bursts are fixed within 48hrs.  | <b>1</b> |
| 4.2.3      | What is the primary cause of burst pipes?   | The age of the network, high pressures in certain areas and intermittent supply.  | <b>W</b> | Allocate a proper budget for replacement and refurbishment. Budget a minimum of 5% of the infrastructure value for this purpose to reduce the risk of system failure. Also consider implementing pressure management in areas with high burst frequencies. | <b>1</b> |
| 4.2.4      | Are active leak detection programmes conducted?   |   |          |  |          |
| 4.2.5      | How often and for how long do reservoirs overflow?  | This happens very seldom.   | <b>O</b> | Obtain an appropriate real time telemetry system to improve the monitoring of the reservoirs and the network.  | <b>3</b> |
| 4.2.6      | Are water losses from treatment processes (backwash, etc.) monitored and minimised?         |   |          |  |          |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY  | PRIORITY |
|-------|---|--|------|---|----------|
| 4.2.7 | Is leakage on private properties a problem and if so, why?                                    | There is a huge problem of internal leakage in the municipality.   | T    | Undertake an internal leak audit in critical areas to accurately determine the extent of water losses and do a cost benefit analysis to assess the merit of periodically performing leak repairs for indigent consumers.  | 1        |
| 4.2.8 | Are leaks on indigent private properties repaired and removal of wasteful devices encouraged? | No.  | T    | Review existing indigent policy and consider undertaking an internal leak audit and repair exercise for indigent and non paying consumers to drastically reduce the NRW.  | 1        |
| 4.3   | <b>Pressure management and control valves</b>   |  |      |   |          |
| 4.3.1 | What is the average and maximum system pressure?  | The pressures are generally very low but it does vary.   | S    | Maintain the satisfactory operating pressure and ensure that operating pressures never exceed the DWA regulatory standard of 9 bar.   | 3        |
| 4.3.2 | Is basic or advanced pressure management being implemented?                                   | No.  | O    | Consider undertaking logging in areas experiencing high burst frequencies and monitor on a monthly basis. If the pressures are high for the area or exceed the regulations stipulated 9 bar, install pressure reducing valves to regulate the pressures more effectively. | 2        |
| 4.3.3 | Are control valves pro-actively being maintained to prevent overflowing reservoirs?           | Only reactive maintenance is taking place.   | T    | Undertake an annual control valve audit to assess the condition of the control valves and ensure that they are in proper working order.   | 2        |
| 4.4   | <b>Consumer metering</b>  |  |      |   |          |
| 4.4.1 | Are domestic and non-domestic consumers metered and which type of meter is used?              |  |      |   |          |
| 4.4.2 | What is the condition, age and accuracy of water meters?                                      | Most of the meters are more than 10 years old.   | O    | Budget and implement a meter replacement programme particularly for bulk and non domestic consumers to improve cost recovery.   | 2        |
| 4.4.3 | Are the top consumers pro-actively monitored on a monthly basis?                              | The top consumers are monitored but not engaged with.  | S    | Continue to monitor the top consumers. Undertake a top consumer audit and ensure that all connections are metered and billed.   | 1        |
| 4.4.4 | Describe the water quality and its impact on consumer water meters?                           | The potable water quality in the Municipality is general very good and it doesn't impact on the meters. The borehole water quality may be different however. | S    | Continue to monitor and report on water quality and ensure that it complies with the DWA blue drop standards.   | 2        |
| 4.4.5 | What is the prevalence and control of illegal connections?                                    | There is a high prevalence of unmetered connections mixed in with illegal connections which are primarily in the former Gazankulu area.                      | T    | Actively monitor illegal connections and periodically undertake an audit on the meters. This can be conducted by the meter readers.   | 1        |
| 4.5   | <b>Management information</b>   |  |      |   |          |
| 4.5.1 | Does the Municipality have an asset register and asset management programme?                  | There is an asset register which sits with District and the LM. The asset register is purely financial and is GRAP compliant.                                | O    | Review the asset register system in place. Maintain and update the asset register on an annual basis. Ensure that the asset register provides critical technical information such as the age, value and replacement date of the assets.                                   | 2        |
| 4.5.2 | What is the status and age of as-built drawings?  | There are some as built drawings available but they have not been updated and are in hard copy.  | T    | Develop electronic as built drawings for the whole network.   | 2        |

| ITEM           | CATEGORY | STATUS QUO | SWOT | STRATEGY | PRIORITY |

|--------------------------|-----------|
| <b>Municipality Name</b> | Thulamela |
| <b>Introduction</b>      |           |

The purpose of the Water Conservation / Water Demand Management (WC/WDM) Scorecard is to ascertain the status quo of WC/WDM and evaluate the potential for WC/WDM measures to be implemented in these systems. The scorecard is also designed to enable the Regulator (Department of Water Affairs) to assess the current situation regarding losses and levels of wastage in all water supply systems countrywide. The scorecard consists of 25 multiple choice questions with each question getting scored from 0 to 4. The Regulator and WSA can track progress with each year the scorecard gets completed. Each question ends with an audit requirement which indicates what will be required by the Regulator should the questionnaire be audited. It also provides an indication on what is required in terms of each of the measures.

| Completed by   |        |  |  |  |         |
|--|--------|--|--|--|---------|
| Date   | Mar-12 |  |  |  | Average |

|--|---|
| <b>Input volume</b>                                    | Estimated values  |
| <b>Authorised consumption (Engineering functions)</b>  | Estimated values  |
| <b>Meter reading and billing (Finance functions)</b>   | Estimated values  |
|  |   |
| Legend   |   |
| High level of accuracy                                 | Calibrated bulk meters, >98% of consumers are metered < 10 years old, <2% billing complaints      |
| Medium level of accuracy                               | Functional bulk meters, >90% of consumers are metered, <10% billing complaints                    |
| Low level of accuracy                                  | Some functional bulk meters, >50% consumer meters, any age, meter reading & billing dysfunctional |
| Estimated values                                       | No bulk or consumer meter readings, best estimate of water consumption                            |
| No data  | No data and no idea of water consumption  |

## WCWDM STRATEGY AND BUSINESS PLAN: Executive Summary

|   |             |             |             |                    |                |                        |
|---|-------------|-------------|-------------|--------------------|----------------|------------------------|
| Province  | Limpopo     | WSA         | Yes         |                    |                |                        |
| Municipal Code  | DC34        | Category    | C2          |                    |                |                        |
| District Municipality   | Vhembe      |             |             |                    |                |                        |
| Municipality  |             |             |             |                    |                |                        |
| Settlements   |             |             |             |                    |                |                        |
| Executive summary   |             |             |             |                    |                |                        |
| Status quo  |             |             |             |                    |                |                        |
| <p>Very limited WCWDM activities are undertaken in the WSA and there is little management information available to perform a proper assessment of the water losses and potential savings. This assessment is inline with RPMS, Drop assessments and WSDP.</p> <p>Most of the towns are informal with formal infrastructure in a relatively smaller area within the District which enables limited metering, billing and cost recovery in the WSA. The current metering, billing and cost recovery systems are inadequate.</p> <p>The engineering departments in the Local Municipalities are characterised by high vacancies and low capacity and skills.</p> <p>The current estimated unit consumption of <b>175 l/c/d</b> is already very low and little further reduction is expected but a more detailed analysis is required to verify this number. It seems there has been a slight increase in the average unit consumption in the area. The relationship with the community is generally positive and the communities themselves are characterised by high unemployment and a large indigent population. The water tariffs are not promoting WCWDM, is not cost reflective and consumers do not value water supply.</p> |             |             |             |                    |                |                        |
| Strategy  |             |             |             |                    |                |                        |
| <p>The municipality should focus on proper recording keeping, analysis and development of detailed management information. All vacancies must be filled as a matter of priority together with skills transfer and capacity building. The engineering and finance department must work closer together to improve metering, billing and cost recovery and start with a meter audit to resolve the high NRW. The metering, billing and cost recovery systems must be improved.</p> <p>A steering committee should be setup to report on a monthly basis to council on water loss figures, leaks repaired, targets, progress, consumer metering, billing and cost recovery.</p> <p>Proper metering, billing and cost recovery should be supported by community awareness that promotes reporting of leaks, fixing of private leaks and efficient use. Based on the available information, a target reduction in NRW of <b>63.1%</b> down to <b>54.8%</b> and target input volume reduction of <b>8.3%</b> have been set. Review the water tariff structure to ensure it reflects true cost, promote WCWDM and work towards compliance with RPMS and improve WSDP.</p>  |             |             |             |                    |                |                        |
| Business Plan   |             |             |             |                    |                |                        |
| The budget requirements for the next five years are summarised in the table below:  |             |             |             |                    |                |                        |

## WCWDM STRATEGY : Qualitative Scorecard

|  |  |   |  |      |   |          |
|--|--|---|--|------|---|----------|
| Municipality Name  |  | Vhembe  |  |      |   |          |
| Introduction   |  |   |  |      |   |          |
| The purpose of this section is to perform a qualitative evaluation of the municipality's water business. The objectives are as follows : |  |   |  |      |   |          |
| SWOT Analysis  |  | External - Opportunities<br>Positive external conditions which you don't control which you could take advantage of  | External - Threats<br>Negative conditions you don't control but could minimise their effects |      |   |          |
| Internal - Strengths<br>Positive aspects under your control and on which you may wish to capitalise                                      |  | Strengths and Opportunities (SO) –<br>Strategies that use strengths to maximize opportunities.  | Strengths and Threats (ST) –<br>Strategies that use strengths to minimize threats.           |      |   |          |
| Internal - Weaknesses<br>Negative aspects under your control (to a large extent) which you could plan to improve                         |  | Weaknesses and Opportunities (WO) –<br>Strategies that minimize weaknesses by taking advantage of opportunities.  | Weaknesses and Threats (WT) –<br>Strategies that minimize weaknesses and avoid threats.      |      |   |          |
| ITEM   | CATEGORY   | STATUS QUO  |  | SWOT | STRATEGY  | PRIORITY |
| 1  | INSTITUTIONAL REVIEW   |   |  |      |   |          |
| 1.1  | Water and Sanitation department structure  |   |  |      |   |          |
| 1.1.1  | Is there an approved organogram for the Water and Sanitation Department?         | There are approved organograms in place.  |  | O    | Review the existing organogram and ensure that it incorporates WC/WDM personnel.  | 1        |
| 1.1.2  | What is the vacancy rate in the department and is it a problem?                  | There is a vacancy rate of approximately 55%. Previously the District was not responsible for the water business. After the devolution of powers to the District, most of the staff was reaching retirement age amongst other challenges. Critical posts have been identified however funding is a challenge. |  | T    | Advertise and fill the identified critical vacant posts. Engage with the Department of finance to identify and explore possible funding options and budget requirements for the critical posts.   | 1        |
| 1.1.3  | Does the department have the correct technical skills for the correct posts.     | 90% of the people taken over by the municipality are general workers. There is a very limited technical skills base.  |  | T    | Increase management, and O&M capacity through new human resources and support it with WC/WDM training in all Local Municipalities within Vhembe District.   | 1        |
| 1.1.4  | Is training and capacity building being done?                                    | Training and capacity building has been undertaken to a limited extent through the DWA support programme. Older staff is difficult to train.  |  | O    | Institute a mandatory WC/WDM training programme for technical staff. Invest in team building and workshop sessions incorporating the councillors and municipal management to boost staff morale.  | 2        |
| 1.1.5  | Are there sufficient support structures ito vehicles, equipment, materials etc.? | Materials and equipment are lacking. The subsidies collapse periodically which means that there is no funding for the tools and vehicles. The materials are not enough to service the 24 existing schemes with a staff base of approximately 1900.  |  | T    | Engage with the Department of Finance and allocate an adequate budget for the critical spares. Allocate a specific person who will be responsible for expediting equipment orders and managing quality control in terms of the procurement processes. | 2        |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY   | PRIORITY |
|-------|---|--|------|--|----------|
| 1.1.6 | Does the municipality own any water loss control equipment such as loggers, listening sticks, etc.? | No loss control equipment.   | O    | It is recommended that loggers and simple leak detection equipment be purchased to improve water loss monitoring and management in the system.   | 3        |
| 1.2   | <b>Municipal support</b>  |  |      |  |          |
| 1.2.1 | Describe the working relationship with other departments such as finance, planning, housing etc.?   | There is a positive relationship between the Water and financial department. The challenge is the payment and cost recovery for water services. Water is used as a stick to get payment for other services. The challenge is prioritisation of the water business. | T    | Establish a NRW steering committee comprising representatives from the technical, communications and finance departments to improve communication and access to information.   | 1        |
| 1.2.2 | Are the politicians supporting the department?  | The politicians do not have a proper understanding of the water business. Training and capacity building is required to assist with the implementation   | T    | Undertake a councillor WC/WDM induction programme to capitalise on the existing relationship and build a communication bridge between the municipality and the customers.  | 2        |
| 1.3   | <b>Public Private Partnerships</b>  |  |      |  |          |
| 1.3.1 | Is there any major industrial or institutional role player in the area and is there co-operation?   | In Musina there is the Venesia Mine as well as mines in Makhado. The industries have never been engaged previously.  | O    | Identify any other additional role players through the top consumer monitoring and conduct courtesy visits as a first phase of the programme. Establish a stakeholder forum if practicable and encourage the participation of the big industries in the forum. | 2        |
| 1.3.2 | If yes, what does the co-operation involve and can it be expanded?                                  |  |      |  |          |
| 1.4   | <b>Legislation and bylaws</b>   |  |      |  |          |
| 1.4.1 | Does the municipality have a customer service charter?  | No customer charter is in place for the District but all the Local Municipalities have it.   | S    | Publicise the existing customer service charters to ensure the customers are aware of the municipalities commitment and their responsibilities as consumers.   | 3        |
| 1.4.2 | What is the status and age of the existing bylaws and do they address water loss management?        | Draft bylaws are in place but they have not been gazetted yet. No previous bylaws are in place or in use. The bylaws will be the same across all local municipalities. WDM has not been specifically addressed in the bylaws.                                      | T    | Review the bylaws and utilise the process to ensure that WC/WDM issues are captured and addressed by the bylaws.   | 2        |
| 1.4.3 | Are bylaws enforced and if not, why not?  | The bylaws are not enforced.   | O    | Develop partnerships with the credit control and legal departments as well as the SAPS and put appropriate bylaw enforcement mechanisms in place.  | 2        |
| 1.4.4 | What is the status and age of Water Services Development Plan?                                      | Latest WDSP obtained for 2010 in draft form.   | S    | Continuously update the WDSP on an annual basis.   | 1        |
|       |   |  |      |  |          |
| 2     | <b>FINANCIAL REVIEW</b>   |  |      |  |          |
| 2.1   | <b>Financial Department</b>   |  |      |  |          |
| 2.1.1 | What is your opinion of the Finance Department's ability to perform metering and billing            | There is generally limited capacity for metering and billing due to limited staff capacity. External service providers were obtained but efficiency is lacking.  | T    | Improve communication and access to information between the technical and finance department through scheduled monthly team meetings.  | 1        |
| 2.1.2 | Is training and capacity building being done?   | There is limited training and capacity building for the financial staff.   |      |  |          |
| 2.1.3 | What is the state of the municipal metering and billing system?                                     |  |      |  |          |

| ITEM     | CATEGORY  | STATUS QUO  | SWOT | STRATEGY   | PRIORITY |
|----------|---|---|------|--|----------|
| 2.1.4    | What is your primary source of funding?   | Conditional grants are the primary source of funding. Without them services cannot be sustained.  | T    | Focus on improving metering and billing and cost recovery where practicable to reduce dependency on grant funding.   | 2        |
| 2.2      | <b>Tariffs</b>  |   |      |  |          |
| 2.2.1    | Who prepares the water tariffs and what is it based on?                                     | The tariffs are prepared by the District but no specific method is used to prepare them.  | O    | Ensure that the technical department continuously makes inputs into the tariff setting process.  | 1        |
| 2.2.2    | What is the tariff structure and does it promote WCWDM?                                     | The Municipality utilises a rising block tariff.  | O    | Ensure that the rising block tariff is sufficiently differentiated in cost at each level to promote WC/WDM with the highest tariff at least twice the amount of the lowest tariff. Obtain and utilise the <u>National Treasury tariff setting guidelines</u> .     | 1        |
| 2.2.3    | Is the water supplied considered affordable by the customers?                               | The consumers do consider the water affordable. They are able to pay for water.   | S    | Continue ensuring that the tariffs remain affordable particularly for the efficient and low income water users.  | 1        |
| 2.3      | <b>Meter Reading and Billing</b>  |   |      |  |          |
| 2.3.1    | Who performs the water meter readings, frequency and accuracy?                              | The local municipality performs the meter readings in-house on a monthly. The external service providers are assisting with improving the accuracy of the readings. | T    | Monitor the frequency and accuracy of meter reading through the customer complaints system.  | 1        |
| 2.3.2    | Are the meter readers trained and can they report leakage when encountered on site?         | The meter readers are able to report leakage.   | O    | Continue providing training for the meter readers on an annual basis particularly on site training based on feedback from the consumers.   | 2        |
| 2.3.3    | Is the water bill understandable and informative?   | The water bills are comprehensible.   | O    | Consider including water conservation tips and information in the water bill. It is also recommended to display 6 months graphical consumption data on the bill to aid consumers in effectively monitoring water use.  | 3        |
| 2.4      | <b>Credit control</b>   |   |      |  |          |
| 2.4.1    | Is credit control being implemented and by whom?  | The local municipalities perform credit control as the WSP' s.  | T    | Through the legal department, develop appropriate credit control enforcement mechanisms to improve revenue recovery.   | 2        |
| 2.4.2    | What is the current level of non-payment?   | The Level of non payment is generally significantly high.   | O    | Focus on promoting payment for services in the metered areas through the councillors and education and awareness.  | 2        |
|          |   |   |      |  |          |
| <b>3</b> | <b>SOCIAL REVIEW</b>  |   |      |  |          |
| 3.1      | <b>Customer profile</b>   |   |      |  |          |
| 3.1.1    | Describe the general consumer profile i.e. Income levels, indigence, unemployment, literacy | 80% of consumption is domestic and a large number of the residents are indigent.  | O    | Focus on educating the indigent population on efficient water use and the importance of the free basic allocation as well as its limitations.  | 1        |
| 3.1.2    | Describe the relationship between customers and the municipality and reasons?               | The relationship between the municipality and the consumers is contentious.   | T    | Engage with the consumers through the councillors and gain their support and cooperation whilst the municipality resolves the water services challenges. Build on the relationship with all the consumers and strengthen it through community awareness campaigns. | 1        |
| 3.2      | <b>Customer awareness</b>   |   |      |  |          |

| ITEM  | CATEGORY  | STATUS QUO  | SWOT | STRATEGY   | PRIORITY |
|-------|---|---|------|--|----------|
| 3.2.1 | Are consumers informed regarding the value of water?  | People don't believe in conserving water in this District.  | T    | Budget and undertake a continuous annual education and awareness campaign focusing on promoting water use efficiency.  | 2        |
| 3.2.2 | What is the level of leakage reporting by the community and what method do they use?                  | The community generally does not report leakage.  | T    | Publicise the customer care services through the councillors, pamphlets attached to water bills and local media to promote reporting of leakage.   | 2        |
| 3.2.3 | What are the most prominent consumer behavioural challenges encountered by the municipality?          | Illegal connections are a big problem in the municipality. People are building bigger houses and want a higher level of service. The Municipality is however on intermittent supply every day between 16:00 and 4:00 am with most of the water schemes shut off at this time. | T    | The community awareness campaign should be tailored to address these problems. The councillors should be encouraged to make these issues an agenda at all public meetings held in the different wards.   | 1        |
| 3.2.4 | Is xeriscaped gardening and rain water harvesting encouraged?   | There is currently no promotion of xeriscaped gardening in the District.  | O    | As part of a community awareness campaign, encourage consumers to harvest rain water and utilise it for garden irrigation and cleaning to reduce the demand for potable water.   | 2        |
| 3.2.5 | Are radio campaigns, bill board, pamphlets, informative billing used to inform and educate customers? | On an adhoc basis, radio campaigns do take place.   | O    | Develop simple visual material in the form of pamphlets which can be used to educate consumers on efficient water use. Build on the media campaign undertaken and periodically publicise water tips on local radio stations and newspapers.  | 2        |
| 3.3   | <b>Schools awareness</b>  |   |      |  |          |
| 3.3.1 | Number of primary and secondary schools?  |   |      |  |          |
| 3.3.2 | Frequency and scope of schools awareness campaigns?   | There is no schools awareness taking place.   | O    | Establish a relationship with schools. Monitor their consumption on a monthly basis and undertake education and awareness. Huge benefit can be derived from this. The section 21 schools in particular should be visited, monitored and encouraged to fix leakage as the O&M budgets are operated by the school management for this category of schools. Engage with the schools through workshops and promote water conservation in the education sector. | 2        |
| 3.3.3 | Are goals and objectives monitored and controlled?  |   |      |  |          |
| 3.4   | <b>Customer Care Centre</b>   |   |      |  |          |
| 3.4.1 | Does the municipality have a CCC and who operates it?   |   |      |  |          |
| 3.4.2 | How and to whom are billing queries referred?   |   |      |  |          |
| 3.4.3 | To whom are the leak reports referred and do consumers have confidence in the reporting system?       |   |      |  |          |
|       |   |   |      |  |          |
| 4     | <b>TECHNICAL REVIEW</b>   |   |      |  |          |
| 4.1   | <b>Measurement and control</b>  |   |      |  |          |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY  | PRIORITY |
|-------|---|--|------|---|----------|
| 4.1.1 | Is the system input volume measured, monitored and controlled?                                | The meters at approximately 9-12 of the treatment works are read on a monthly basis. The boreholes are also monitored in terms of quality and yield.       | O    | Continue to read the bulk meters on a monthly basis and monitor the input volumes. Install bulk meters at all unmetered bulk connections and capture all the readings on a spread sheet to be updated on a monthly basis.                   | 1        |
| 4.1.2 | Is the water supply system sectorised into zones and districts?                               | No sectorisation has taken place.  | T    | Sectorise the water supply system into manageable sized areas or zones to enable improved monitoring of the system.   | 1        |
| 4.1.3 | Are the supply to the zones and districts metered?  | There are no zone meters in place.   | T    | Install zone meters and ensure that they are read on a monthly basis. The readings must be captured on a spread sheet.  | 1        |
| 4.1.4 | Is the system monitored through a telemetry system?   |  |      |   |          |
| 4.1.5 | What is the Frequency and detail of your water balance calculation?                           |  |      |   |          |
| 4.1.6 | Are minimum night flows, consumption trends and logging used to monitor the system?           |  |      |   |          |
| 4.1.7 | Are monthly management reports prepared and key performance indicators measured?              |  |      |   |          |
| 4.2   | <b>Physical leakage</b>   |  |      |   |          |
| 4.2.1 | What is the average age of the network, pipe material, replacement programme?                 | The network is old with mostly asbestos cement pipes. A replacement programme is planned for the District.   | T    | Set aside 5% of the CAPEX budget for the replacement of the network.  | 1        |
| 4.2.2 | Number of burst pipes reported and repaired per week / month and the average response time?   |  |      |   |          |
| 4.2.3 | What is the primary cause of burst pipes?   | The primary cause is the age of the network. Most of the pipes have reached their life span. There is also no pressure management taking place.            | T    | Allocate a proper budget for replacement and refurbishment. Budget a minimum of 5% of the infrastructure value for this purpose to reduce the risk of system failure.   | 1        |
| 4.2.4 | Are active leak detection programmes conducted?   |  |      |   |          |
| 4.2.5 | How often and for how long do reservoirs overflow?  | Some of the reservoirs overflow but not often because of the general shortage of water.  | W    | Acquire appropriate real time telemetry systems to monitor the reservoirs.  | 1        |
| 4.2.6 | Are water losses from treatment processes (backwash, etc.) monitored and minimised?           |  |      |   |          |
| 4.2.7 | Is leakage on private properties a problem and if so, why?                                    | Leakage on private properties is a problem because people don't pay for water.   | T    | Consider undertaking an extended and coordinated leak repair programme on indigent properties to rapidly and drastically decrease NRW.  | 1        |
| 4.2.8 | Are leaks on indigent private properties repaired and removal of wasteful devices encouraged? | The leaks on private properties are not repaired by the municipalities with the exception of government buildings.   | T    | Undertake an internal leak audit in critical areas to accurately determine the extent of water losses and do a cost benefit analysis to assess the merit of carrying out a coordinated annual leak repair programme for indigent consumers. | 1        |
| 4.3   | <b>Pressure management and control valves</b>   |  |      |   |          |
| 4.3.1 | What is the average and maximum system pressure?  |  |      |   |          |
| 4.3.2 | Is basic or advanced pressure management being implemented?                                   |  |      |   |          |
| 4.3.3 | Are control valves pro-actively being maintained to prevent overflowing reservoirs?           |  |      |   |          |
| 4.4   | <b>Consumer metering</b>  |  |      |   |          |
| 4.4.1 | Are domestic and non-domestic consumers metered and which type of meter is used?              | 60% of non domestic properties are metered and 70% of domestic properties are metered. Most of the meters have been recently replaced so they are working. | O    | Meter and bill 100% of non domestic connections as a priority and increasingly meter and bill the domestic consumers where practicable to increase revenue water.   | 1        |

| ITEM  | CATEGORY   | STATUS QUO  | SWOT | STRATEGY  | PRIORITY |
|-------|--|---|------|---|----------|
| 4.4.2 | What is the condition, age and accuracy of water meters?                     |   |      |   |          |
| 4.4.3 | Are the top consumers pro-actively monitored on a monthly basis?             | The big consumers are being monitored.  | S    | Continue to monitor the top consumers and conduct this on a monthly basis. Undertake a top consumer audit and ensure that all connections are metered and billed.   | 1        |
| 4.4.4 | Describe the water quality and its impact on consumer water meters?          |   |      |   |          |
| 4.4.5 | What is the prevalence and control of illegal connections?                   |   |      |   |          |
| 4.5   | <b>Management information</b>  |   |      |   |          |
| 4.5.1 | Does the Municipality have an asset register and asset management programme? | There is an asset register but it does not contain assets inherited from DWA.   | O    | Review the asset register system in place. Maintain and update the asset register on an annual basis. Ensure that the asset register provides critical technical information such as the age, value and replacement date of the assets. | 2        |
| 4.5.2 | What is the status and age of as-built drawings?                             | As built drawings of the new projects are available but not of the old schemes. | T    | Develop electronic as built drawings for the whole network.   | 2        |
|       |  |   |      |   |          |

### Summary

| SWOT Analysis  | Helpful   | Harmful  |
|--|---|--|
| <b>Internal factors</b><br>(Staff, infrastructure, tools, equipment) | Approved organogram in place<br>Monitoring of top consumers<br>Customer Service Charters in all the LM's  | Very high vacancy rate - lack of capacity<br>No water loss equipment<br>No proactive monitoring of water losses in zones<br>Limited bulk metering<br>No Sectorisation and zone metering  |
| <b>Internal factors</b><br>(Politics, finance, consumers, economics) | Good relationship with finance but can improve<br>Community and schools Awareness<br>Councillor training programme<br>Review charters, policies and bylaws to promote WDM<br>Metering of all non domestic consumers | Very old infrastructure<br>Insufficient vehicles and material to support O&M<br>Dependency on grant funding<br>Uninformed community<br>Illegal connections<br>High levels of leakage on private properties<br>Poor relationship with consumers<br>Uninformed councillors |

## WCWDM STRATEGY : Quantitative Scorecard

|  |  |               |               |  |                |
|--|--|---------------|---------------|--|----------------|
| <b>Municipality Name</b>   | Musina LM, Mutale LM, Thulamela LM, Makhado LM |               |               |  |                |
| <b>Introduction</b>  |  |               |               |  |                |
| <p>The purpose of the Water Conservation / Water Demand Management (WC/WDM) Scorecard is to ascertain the status quo of WC/WDM and evaluate the potential for WC/WDM measures to be implemented in these systems. The scorecard is also designed to enable the Regulator (Department of Water Affairs) to assess the current situation regarding losses and levels of wastage in all water supply systems countrywide. The scorecard consists of 25 multiple choice questions with each question getting scored from 0 to 4. The Regulator and WSA can track progress with each year the scorecard gets completed. Each question ends with an audit requirement which indicates what will be required by the Regulator should the questionnaire be audited. It also provides an indication on what is required in terms of each of the measures.</p> |  |               |               |  |                |
|  | <b>Date</b>                                    | <b>Jun-10</b> | <b>Jun-11</b> |  | <b>Average</b> |

### Key questions from the Regulatory Performance Measurement System (RPMS) related to WC/WDM

| KPI   |  | ID     | WSA Value |
|---|--|--------|-----------|
| <b>KPI 1 – Access to Water</b>                          |  |        |           |
| <b>KPI 2 – Access to Sanitation</b>                     |  |        |           |
| <b>KPI 3 – Access to Free Basic Water</b>               |  |        |           |
|   | Total poor households receiving Free Basic Water for last financial year   | ID:012 |           |
|   | Total poor households  | ID:013 |           |
| <b>KPI 4 – Access to Free Basic Sanitation</b>          |  |        |           |
|   | Total poor households receiving Free Basic Sanitation for last financial year  | ID:014 |           |
|   | Total poor households  | ID:013 |           |
| <b>KPI 5 – Drinking Water Quality</b>                   |  |        |           |
| <b>KPI 6 –Wastewater Quality</b>                        |  |        |           |
| <b>KPI 7 - Customer Services Standards</b>              |  |        |           |
| <b>Component 1 – Service Interruptions</b>              |  |        |           |
|   | Total number of Service interruptions in the last financial year   | ID:034 |           |
|   | Number of interruptions in continuous service to consumers, where interruption for a single incident was greater than 24h  | ID:033 |           |
| <b>Component 2 – CRM Systems</b>                        |  |        |           |
|   | Does the WSA have a customer Charter   | ID:036 |           |
|   | Does the WSA have a customer service centre  | ID:035 |           |
|   | Is there a system to manage customer queries and log faults  | ID:038 |           |
|   | Does the incident tracking system escalate complaints if not responded to within a prescribed time?                        | ID:037 |           |
| <b>KPI 8 - Institutional Effectiveness</b>              |  |        |           |
| <b>Component 1 - Institutional Effectiveness</b>        |  |        |           |
|   | Completed WSDP is approved by Council for the last financial year?   | ID:039 |           |
|   | Required policies are in place and approved by Council?  | ID:040 |           |
|   | Required bylaws are in place and approved by Council?  | ID:041 |           |

| Executive summary   |   |                |                        |            |            |             |
| Status quo  |   |                |                        |            |            |             |
| <p>The municipality started with WCWDM and there is sufficient management information available to perform an assessment of the water losses and potential savings. The performance is in line with RPMS and DWA Drop assessments.</p> <p>All towns are formal with formal infrastructure which enables proper metering and billing but rural areas are a problem.</p> <p>The engineering department is characterised by high (40%) vacancy and lacks management capacity and skills.</p> <p>The working relationship with the finance department can improve.</p> <p>The NRW is very high at 44.5% but the unit consumption of 150 l/c/d is low and probably as a result of the rural water supply schemes. A better understanding of the population supplied and LOS is required.</p> <p>There has been a considerable increase in unit consumption over the past few years.</p> <p>The relationship with the community is fair but can improve with the elimination of intermittent supply.</p>  |   |                |                        |            |            |             |
| Strategy  |   |                |                        |            |            |             |
| <p>The municipality should focus on proper recording keeping, analysis and development of detailed management information.</p> <p>The engineering and finance department must work closer together to improve metering, billing and cost recovery and start with a meter audit. All vacancies must be filled as a matter of priority together with skills transfer and capacity building.</p> <p>A steering committee should be setup to report on a monthly basis to council on water loss figures, leaks repaired, targets, progress, consumer metering, billing and cost recovery.</p> <p>Proper metering, billing and cost recovery should be supported by community awareness that promotes reporting of leaks, fixing of private leaks and efficient use.</p> <p>Based on the available information, a target reduction in NRW of 45% down to 26% and target input volume reduction of 3.5% have been set. Review the water tariff structure to promote WCWDM, reflects true cost and work towards compliance with RPMS and improvement of their WSDP</p> |   |                |                        |            |            |             |

**WCWDM STRATEGY : Qualitative Scorecard**

Municipality Name Polokwane

**Introduction**

The purpose of this section is to perform a qualitative evaluation of the municipality's water business. The objectives are as follows :

| SWOT Analysis  | External - Opportunities<br>Positive external conditions which you don't control which you could take advantage of | External - Threats<br>Negative conditions you don't control but could minimise their effects |
|--|--|--|
| Internal - Strengths<br>Positive aspects under your control and on which you may wish to capitalise              | Strengths and Opportunities (SO) –<br>Strategies that use strengths to maximize opportunities                      | Strengths and Threats (ST) –<br>Strategies that use strengths to minimize threats.           |
| Internal - Weaknesses<br>Negative aspects under your control (to a large extent) which you could plan to improve | Weaknesses and Opportunities (WO) –<br>Strategies that minimize weaknesses by taking advantage of opportunities    | Weaknesses and Threats (WT) –<br>Strategies that minimize weaknesses and avoid threats       |

| ITEM     | CATEGORY  | STATUS QUO   | SWOT | STRATEGY   | PRIORITY<br>(1) High<br>(3) Low |
|----------|---|--|------|--|---------------------------------|
| <b>1</b> | <b>INSTITUTIONAL REVIEW</b>   |  |      |  |                                 |
| 1.1      | Water and Sanitation department structure   |  |      |  |                                 |
| 1.1.1    | Is there an approved organogram for the Water and Sanitation Department?                            | The existing organogram is under review and critical vacancies have been identified  | S    | Ensure that the revised organogram is approved as soon as possible   | 1                               |
| 1.1.2    | What is the vacancy rate in the department and is it a problem?                                     | Current vacancy rate is 40%. This is problematic as critical positions in the section are open and the operations and maintenance team must be significantly expanded to cope with the management of the water supply system | W    | Identified critical posts must be filled within the next 6 months.   | 1                               |
| 1.1.3    | Does the department have the correct technical skills for the correct posts.                        |  |      |  |                                 |
| 1.1.4    | Is training and capacity building being done?   | No training and capacity building is currently taking place.   | W    | A training programme should be instituted particularly for O&M staff and WDM Management personnel to improve efficiency and monitoring                                       | 2                               |
| 1.1.5    | Are there sufficient support structures i.e. vehicles, equipment, materials etc.?                   | Supply chain appears to have challenges in terms of expediting the procurement of material.  | T    | The Supply Chain management systems must be improved. Alternatively the municipality can outsource the procurement of material improve the efficiency of obtaining materials | 1                               |
| 1.1.6    | Does the municipality own any water loss control equipment such as loggers, listening sticks, etc.? | There is no existing water loss control equipment. The municipality primarily undertakes reactive maintenance.   | W    | It is recommended that loggers and simple leak detection equipment be purchased to improve water loss monitoring and management in the system.                               | 2                               |
| 1.2      | Municipal support   |  |      |  |                                 |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY  | PRIORITY<br>(1) High<br>(3) Low |
|-------|---|--|------|---|---------------------------------|
| 1.2.1 | Describe the working relationship with other departments such finance, planning, housing etc.?    | The relationship between the Finance and Technical department is very good.  | O    | The positive relationship between these departments should be utilised to improve water loss management. Water sales can be requested on a monthly basis from finance in order to compile and more effectively monitor the NDM. |                                 |
| 1.2.2 | Are the politicians supporting the department?  | The politicians are supportive particularly in the improvement of cost recovery, however they require WC/WDM training to better understand the objectives and goals of the municipality. | O    | Plan a workshop session with the local councillors comprising an introduction to WC/WDM.  | 3                               |
| 1.3   | <b>Public Private Partnerships</b>  |  |      |   |                                 |
| 1.3.1 | Is there any major industrial or institutional role player in the area and is there co-operation? |  |      |   |                                 |
| 1.3.2 | If yes, what does the co-operation involve and can it be expanded?                                |  |      |   | 3                               |
| 1.4   | <b>Legislation and bylaws</b>   |  |      |   |                                 |
| 1.4.1 | Does the municipality have a customer service charter?  | The municipality has no existing customer charter but intend to develop one.   | O    | Develop a customer service charter to ensure the customers are aware of the municipalities commitment and their responsibilities as consumers.  | 2                               |
| 1.4.2 | What is the status and age of the existing bylaws and do they address water loss management?      | There are existing promulgated bylaws which address WC/WDM.  | S    | Periodically review the bylaws and ensure they encapsulate the latest developments and continue to promote WC/WDM.  | 2                               |
| 1.4.3 | Are bylaws enforced and if not, why not?  | There bylaws are not enforced.   | O    | Bylaw enforcement mechanisms should be put in place in partnership with local institutions such as the SAPS as well as the Legal department of the municipality.  | 1                               |
| 1.4.4 | What is the status and age of Water Services Development Plan?                                    | An annually reviewed Water Services Development Plan was developed and submitted for 2010.   | S    | Continuously update the WSDP on an annual basis.  | 1                               |
| 2     | <b>FINANCIAL REVIEW</b>   |  |      |   |                                 |
| 2.1   | <b>Financial Department</b>   |  |      |   |                                 |
| 2.1.1 | What is your opinion of the Finance Department's ability to perform metering and billing          |  |      |   |                                 |
| 2.1.2 | Is training and capacity building being done?   |  |      |   |                                 |
| 2.1.3 | What is the state of the municipal metering and billing system?                                   | Inaccurate meter readings have become a significant concern. A contract with a new meter reading company is currently being negotiated to improve efficiency.                            | S    | Finalise new meter reading contract and monitor the metering situation.   | 1                               |
| 2.1.4 | What is your primary source of funding?   |  |      |   |                                 |
| 2.2   | <b>Tariffs</b>  |  |      |   |                                 |

| ITEM     | CATEGORY  | STATUS QUO   | SWOT | STRATEGY  | PRIORITY<br>(1) High<br>(3) Low |
|----------|---|--|------|---|---------------------------------|
| 2.2.1    | Who prepares the water tariffs and what is it based on?                                     | The water tariffs are prepared by the department of Finance, however the technical department does make inputs. No guidelines were previously used to set the tariffs but guidelines will be used by the municipality in future. | T    | Obtain National Treasury tariff guidelines and review tariffs.  | 1                               |
| 2.2.2    | What is the tariff structure and does it promote WCWDM?                                     | Currently, the tariffs do not adequately cover the costs of service provision. The municipality is operating at a huge financial deficit.  | T    | Review the current tariff structure. Institute a rising block tariff sufficiently differentiated in cost at each level to promote WCWDM.  | 1                               |
| 2.2.3    | Is the water supplied considered affordable by the customers?                               | The tariff appears affordable for the consumers which is indicated by the high levels of payment and cost recovery.  | S    | Continue ensuring that the tariffs remain affordable particularly for the efficient and low income water users.   | 1                               |
| 2.3      | <b>Meter Reading and Billing</b>  |  |      |   |                                 |
| 2.3.1    | Who performs the water meter readings, frequency and accuracy?                              | An external meter reading company has been contracted to undertake meter reading, however the work produced has been sub standard.   | T    | Monitor the frequency and accuracy of meter reading through the customer complaints system.   | 1                               |
| 2.3.2    | Are the meter readers trained and can they report leakage when encountered on site?         |  |      |   |                                 |
| 2.3.3    | Is the water bill understandable and informative?   | Informative billing is taking place.   | S    | Consider including water conservation tips and information in the water bill. It is also recommended to display 6 months graphical consumption data on the bill to aid consumers in effectively monitoring water use. | 3                               |
| 2.4      | <b>Credit control</b>   |  |      |   |                                 |
| 2.4.1    | Is credit control being implemented and by whom?  |  |      |   |                                 |
| 2.4.2    | What is the current level of non-payment?   | Non payment levels are low particularly because the politicians are active in supporting cost recovery.  | S    | Capitalise on the relationship with the councillors and the community and ensure that the areas that re not yet metered are metered and billed to increase revenue water.   | 3                               |
| <b>3</b> | <b>SOCIAL REVIEW</b>  |  |      |   |                                 |
| 3.1      | <b>Customer profile</b>   |  |      |   |                                 |
| 3.1.1    | Describe the general consumer profile i.e. Income levels, indigence, unemployment, literacy |  |      |   |                                 |
| 3.1.2    | Describe the relationship between customers and the municipality and reasons?               | The relationship between the community and the municipality appears positive. The community does communicate leakage to the municipality which indicates that the lines of communication are open.                               | O    | The existing relationship should be improved on and utilised to increasingly promote water conservation.  | 2                               |
| 3.2      | <b>Customer awareness</b>   |  |      |   |                                 |

| ITEM  | CATEGORY  | STATUS QUO   | SWOT | STRATEGY  | PRIORITY<br>(1) High<br>(3) Low |
|-------|---|--|------|---|---------------------------------|
| 3.2.1 | Are consumers informed regarding the value of water?  | A water awareness community campaign was initiated by the municipality in September 2011. It is envisaged that the campaign will become an on-going initiative | S    | The community awareness must become an annual on-going programme to make an impact. It can be monitored through KAP surveys conducted biannually in order to determine effectiveness and pertinent water services issues.                                       | 2                               |
| 3.2.2 | What is the level of leakage reporting by the community and what method do they use?                  | The community frequently reports leakage through the customer care centre.   | S    | Ensure that the customer care line is continuously publicised to further encourage reporting of leakage.  | 3                               |
| 3.2.3 | What are the most prominent consumer behavioural challenges encountered by the municipality?          | Unlawful connections and general wastage of water are the most pertinent behavioural challenges in the municipality.   | T    | The community awareness campaign should be tailored to address these problems. The councillors should be encouraged to make these issues an agenda at all public metering held in the different wards.  | 2                               |
| 3.2.4 | Is xeriscaped gardening and rain water harvesting encouraged?   |  |      |   | 3                               |
| 3.2.5 | Are radio campaigns, bill board, pamphlets, informative billing used to inform and educate customers? | A radio campaign has been undertaken as part of the wider community awareness being implemented.   | S    |   | 3                               |
| 3.3   | <b>Schools awareness</b>  |  |      |   |                                 |
| 3.3.1 | Number of primary and secondary schools?  |  |      |   |                                 |
| 3.3.2 | Frequency and scope of schools awareness campaigns?   | A schools programme has been undertaken in one of the municipal clusters comprising 27 schools.  | S    | Huge benefit can be derived from the expansion of the schools programme. The section 21 schools in particular should be visited, monitored and encouraged to fix leakage as the O&M budgets are operated by the school management for this category of schools. | 3                               |
| 3.3.3 | Are goals and objectives monitored and controlled?  |  |      |   | 3                               |
| 3.4   | <b>Customer Care Centre</b>   |  |      |   |                                 |
| 3.4.1 | Does the municipality have a CCC and who operates it?   | The municipality has a 24 hour call centre.  | S    | The customer care personnel should receive training on WCVMDM to ensure that they are knowledgeable and equipped to assist the consumers. This will help to improve the communication between the municipality and the community.                               | 2                               |
| 3.4.2 | How and to whom are billing queries referred?   |  |      |   |                                 |
| 3.4.3 | To whom are the leak reports referred and do consumers have confidence in the reporting system?       |  |      |   |                                 |
| 4     | <b>TECHNICAL REVIEW</b>   |  |      |   |                                 |
| 4.1   | <b>Measurement and control</b>  |  |      |   |                                 |

| ITEM  | CATEGORY  | STATUS QUO  | SWOT | STRATEGY   | PRIORITY<br>(1) High<br>(3) Low |
|-------|---|---|------|--|---------------------------------|
| 4.1.1 | Is the system input volume measured, monitored and controlled?                                | There are currently no bulk meters. Measurement is taking place only at the water treatment works, therefore this aspect is not adequately monitored. | W    | Bulk meters must be installed and read on a monthly basis.   | 1                               |
| 4.1.2 | Is the water supply system sectorised into zones and districts?                               | No sectorisation has taken place.   | W    | The water supply system must be sectorised into manageable sized areas to allow for improved monitoring.   | 2                               |
| 4.1.3 | Are the supply to the zones and districts metered?  | There are no existing zone meters.  | W    | Zone meters must be installed and read on a monthly basis. The readings must be captured on a spread sheet.  | 2                               |
| 4.1.4 | Is the system monitored through a telemetry system?   | There is no telemetry system in place. As a result, reservoirs are frequently overflowing.  | W    | Due to the frequency of overflowing reservoirs, a telemetry system is recommended to monitor activity at the reservoirs.   | 1                               |
| 4.1.5 | What is the Frequency and detail of your water balance calculation?                           |   |      |  |                                 |
| 4.1.6 | Are minimum night flows, consumption trends and logging used to monitor the system?           | No MNF and flow or pressure analysis is taking place.   | W    | Obtain and install logging equipment periodically on the bulk meters and conduct MNF analysis to determine leakage levels and areas experiencing high or low pressures.                    | 2                               |
| 4.1.7 | Are monthly management reports prepared and key performance indicators measured?              | Management reports are produced on an ad hoc basis. No monthly management is undertaken.  | W    | Prepare monthly reports on the NRW KPI's   | 2                               |
| 4.2   | <b>Physical leakage</b>   |   |      |  |                                 |
| 4.2.1 | What is the average age of the network, pipe material, replacement programme?                 | The majority of the network is very old. 70% of the network must be replaced in the near future.  | T    | Set aside 5% of the CAPEX budget for the replacement of the network.   | 2                               |
| 4.2.2 | Number of burst pipes reported and repaired per week / month and the average response time?   | Average response time for leak repair is 48hrs.   | S    | The response time of 48hrs must be maintained and continuously improved upon.  | 2                               |
| 4.2.3 | What is the primary cause of burst pipes?   |   |      |  |                                 |
| 4.2.4 | Are active leak detection programmes conducted?   | A service provider is contracted on an ad hoc basis to undertake leak detection on the network (approximately once a year).                           | S    | Conduct active leak detection bi annually (twice a year) through the existing contractor.  | 3                               |
| 4.2.5 | How often and for how long do reservoirs overflow?  | The reservoirs overflow frequently.   | W    | Install a real time telemetry system to monitor activity at the reservoirs.  | 2                               |
| 4.2.6 | Are water losses from treatment processes (backwash, etc.) monitored and minimised?           |   |      |  |                                 |
| 4.2.7 | Is leakage on private properties a problem and if so, why?                                    |   |      |  |                                 |
| 4.2.8 | Are leaks on indigent private properties repaired and removal of wasteful devices encouraged? | The municipality does not fix leaks on private properties.  | O    | Undertake a leak audit as part of the community awareness campaign and determine the extent of internal plumbing leakage. Consider repairing leaks on indigent properties to decrease NRW. | 3                               |
| 4.3   | <b>Pressure management and control valves</b>   |   |      |  |                                 |
| 4.3.1 | What is the average and maximum system pressure?  |   |      |  |                                 |

| ITEM  | CATEGORY  | STATUS QUO  | SWOT | STRATEGY  | PRIORITY<br>(1) High<br>(3) Low |
|-------|---|---|------|---|---------------------------------|
| 4.3.2 | Is basic or advanced pressure management being implemented?                         | No pressure management is currently being implemented.  | O    | Install PRV's in critical areas experiencing high pressures and monitor on a monthly basis.   | 2                               |
| 4.3.3 | Are control valves pro-actively being maintained to prevent overflowing reservoirs? | No preventative measures for reservoir overflows are currently in place.  | W    | Existing control valves must be maintained or recommissioned to assist in the monitoring of reservoirs.   | 1                               |
| 4.4   | <b>Consumer metering</b>  |   |      |   |                                 |
| 4.4.1 | Are domestic and non-domestic consumers metered and which type of meter is used?    | 75%-98% of the non residential consumers are metered and 50%-75% of residential consumers are metered.  | O    | Meter and bill 100% of non domestic connections as a priority and increasingly meter and bill the domestic consumers where practicable to increase revenue water.                 | 1                               |
| 4.4.2 | What is the condition, age and accuracy of water meters?                            |   |      |   |                                 |
| 4.4.3 | Are the top consumers pro-actively monitored on a monthly basis?                    | No pro-active monitoring of the top consumers is currently taking place.  | O    | Initiate monthly monitoring of top non domestic consumers. Undertake a top consumer audit and ensure that all connections are metered and billed.                                 | 2                               |
| 4.4.4 | Describe the water quality and its impact on consumer water meters?                 |   |      |   |                                 |
| 4.4.5 | What is the prevalence and control of illegal connections?                          | There is a high prevalence of illegal connections. Removal of illegal connections takes place on an ad-hoc reactive basis, however reconnection of these connections is also a challenge. | W    | Undertake an illegal connection removal programme. Consider an amnesty programme where consumers with unlawful connections can come forward and report without prosecution.       | 1                               |
| 4.5   | <b>Management information</b>   |   |      |   |                                 |
| 4.5.1 | Does the Municipality have an asset register and asset management programme?        | There is no data management system in place to consolidate asset management data. The information is available but scattered and fragmented.  | W    | Obtain an electronic asset management programme and institute an asset management programme. Utilise indigent community members to locate and clean the municipal infrastructure. | 2                               |
| 4.5.2 | What is the status and age of as-built drawings?                                    | As-Built drawings are available digitally for the majority of the network and available in hard copy for the remainder of the network.  | T    | Develop digital copies of the remainder of the network.   | 2                               |

## WCWDM STRATEGY : Quantitative Scorecard

|   |                    |               |  |  |                |
|---|--------------------|---------------|--|--|----------------|
| <b>Municipality Name</b>  | Polokwane          |               |  |  |                |
| <b>Introduction</b>   |                    |               |  |  |                |
| <p>The purpose of the Water Conservation / Water Demand Management (WCWDM) Scorecard is to ascertain the status quo of WCWDM and evaluate the potential for WCWDM measures to be implemented in these systems. The scorecard is also designed to enable the Regulator (Department of Water Affairs) to assess the current situation regarding losses and levels of wastage in all water supply systems countrywide. The scorecard consists of 25 multiple choice questions with each question getting scored from 0 to 4. The Regulator and WSA can track progress with each year the scorecard gets completed. Each question ends with an audit requirement which indicates what will be required by the Regulator should the questionnaire be audited. It also provides an indication on what is required in terms of each of the measures.</p> |                    |               |  |  |                |
|   | <b>Supply area</b> | <b>Aug-11</b> |  |  | <b>Average</b> |
| 1. Development of Standard Water Balance  | 3                  |               |  |  | 3              |
