Project Stakeholder Committee Meeting 02

Presented by: Date: Umvoto 18 February 2025

WATER IS LIFE - SANITATION IS DIGNITY

water & sanitation

Department: Water and Sanitation **REPUBLIC OF SOUTH AFRICA**

Umvoto South Africa (Pty) Ltd

EARTH | WATER | SCIENCE | LIFE

PRESENTATION OUTLINE

- 1. Quick Recap
- 2. Progress to Date
- 3. Status Quo Report
 - 1. Example SWSA-gw
- 4. Upcoming Events
 - 1. Meetings
 - 2. Stakeholder Engagement
 - 3. Capacity Building
- 5. Finance Overview
- 6. Discussion

PROJECT OVERVIEW

Initiation

- Initiated by: DWS Chief Directorate: Water Ecosystems Management (CD: WEM).
- **PSP:** Umvoto South Africa (Pty) Ltd.

Project Focus

- Focus: Refine South Africa's Strategic Groundwater Source Areas (SWSA-gw)
- Goal: Improve the spatial accuracy SWSA-gw for South Africa and refine delineations to be aquifer-specific (where feasible).
- **Purpose:** Guide management and protective measures.

Implementation

- **Approach:** To facilitate collaboration among government and non-government stakeholders.
- Framework: Integrated Water Resource Management (IWRM) as per the National Water Act (NWA; Act No. 36 of 1998) and National Water Recourse Strategy III (NWRS III, 2023).

PROJECT PHASES & PROGRESS TO DATE

COMPLETED DELIVERABLES

INCEPTION REPORT

- Project's scope (programme of deliverables & invoicing)
- High-level review of existing refinement methodologies
- Overview of the evolution of SWSA-gw of South Africa
- Stakeholder engagement plan
- · Capacity-building and mentorship program

GAP ANALYSIS REPORT

- Project data catalogue
- Gap analysis and impact assessment
- Technical feasibility assessment
- Feedback loop to incorporate new data and stakeholder feedback
- Recommendations and strategic prioritization

https://www.dws.gov.za/wem/currentstudies/default.aspx

UPCOMING DELIVERABLES

Phase 3

Refinement of SWSA for Groundwater (SWSA-gw) Stakeholder feedback has been consolidated, and steady progress is being made on Deliverable 3.1.

| Da | Refinement of SWSA for Groundwater | | | | 2 | 2024 | | | | | | | | | | 20 | 25 | | | | | | | | | | | 20 | 26 | | | | | | 2 | 202 | 7 |

STATUS QUO REPORT

GROUNDWATER FOCUS

To conduct a comprehensive review, the boundaries of the 37 SWSA-gw areas were combined with those of the 29 SWSA-swgw areas, creating groundwater-focused assessment areas. A total of 37 groundwater-focused areas (highlighted in orange) have been defined for the Status Quo assessment.

GW + SWGW

OBJECTIVES & APPROACH OF THE STATUS QUO REPORT

OBJECTIVES

- 1. Evaluate the current status of the 37 SWSA-gw
- 2. Evaluate and update the data into a usable format to identify data gaps.
- Compile a comprehensive SWSA-gw specific Status Quo

Description

Geospatial Context 1.

OBJECTIVES & APPROACH OF THE STATUS QUO REPORT

Status Quo Assessment Example

Example: West Coast Aquifer SWSA-gw

Major Roads, infrastructure, towns and settlements

The West Coast Aquifer SWSA-gw, covering approximately 4,586 km², is located in the Western Cape Province of South Africa. It spans the West Coast District Municipality and City of Cape Town Metropolitan Municipality. It includes major towns such as Darling, Atlantis, and Langebaan.

Description

2. Hydrology & Drainage

- Surface Water Features: Rivers, Streams, Wetlands
- Flow Regimes: Perennial, Intermediate, Ephemeral
- Catchment Characteristics: Boundaries, Flow Direction, Runoff

The area features four major surface water systems. These include Langebaan Lagoon, fed by the G2 catchment, and the Berg and Sout Rivers, along with the Berg River Estuary, fed by the G1 catchment. The Berg and Sout Rivers are perennial, flowing northwest to the Berg River Estuary. Surface water is limited by low rainfall, gentle topography, and permeable, sand-dominated geology.

The area is geologically complex, with basement rocks (Malmesbury Group shales and Cape Granite Suite) overlain by Tertiary to Quaternary Sandveld Group sediments (Langebaan, Witzand, Springfontyn, and Varswater formations) averaging 50–70 m in thickness. Granites dominate the coast, while metamorphosed shales are common in the east. Ancient river systems, like the Berg River, have carved palaeochannels filled with high-yielding Elandsfontyn Formation sediments, enhancing groundwater storage and flow.

4. Quantity

- Aquifer Type Type, Description, etc
- Groundwater Recharge: Recharge areas, rates and mechanisms
- Hydraulic Properties: Conductivity, Transmittivity, etc
- Groundwater Use: Volume, User, Water Use Sector, etc
- Groundwater Quality: Major Ions, Metals, etc

Major Aquifers in The West Coast Aquifer SWSA-gw

- Langebaan Road Aquifer
- Elandsfontein Aquifer
- Atlantis Aquifer

Status Quo

4. Quantity

RECHARGE

Estimating groundwater recharge is a complex process that requires a detailed understanding of hydrogeology.

Various methods, beyond using a % of Mean Annual Precipitation (MAP), can be employed to estimate recharge. These include models such as the GRAII, BRBS Rainfall-Recharge Relationships, and the Berg WAAS Map-Centric Methods.

Status Quo

4. Quantity

| | Water User Sector | Registered Volume (Mm³/a) |
|-------------|---------------------------------|---------------------------|
| | Agriculture: Irrigation | 8.1006786 |
| | Agriculture: Watering Livestock | 0.542967 |
| GROUNDWATER | Industry (Non-urban) | 0.0956815 |
| USE | Industry (Urban) | 8.618614 |
| | Mining | 0.868 |
| | Water Supply Service | 1.606863 |
| | Total | 19.832804 |

Status Quo

4. Quantity

SOCIO-ECONOMIC & GOVERNANCE

- Population Dynamics: Density, Growth Rates, GW dependence
- Infrastructure:
 Bulk Water Supply
- Governance: Policies, regulations, management plans
- Stakeholders:
 Public and Private

| Population 2011 |
|-----------------|
| 66 931 |
| Population 2025 |
| ~73 624 |
| |

Towns like Saldanha and Atlantis rely on a combination of groundwater and surface water, while Velddrif, Vredenburg, and Darling primarily depend on surface water. The population in these areas has grown by an estimated 10% between 2011 and 2024.

Status Quo

5. Quality

GROUNDWATER QUALITY

Langebaan Road Aquifer

- Primary water type: Na-Cl.
- Source: Marine aerosols and coastal rainfall recharge .
- Boreholes near Tygerberg Fm contribute elevated Na and Cl. Notable absence of Ca-HCO₃ water type, despite calcite-rich Langebaan Fm.

Yzerfontein Aquifer

- Primary water types: Na-Cl and Ca-Mg-Cl.
- Na-Cl: Marine aerosols and coastal rainfall recharge.
- Ca-Mg-CI: Result of Na⁺ cation exchange with Ca²⁺ and Mg²⁺ in Langebaan and Witzands Fms.

Atlantis Aquifer

- Primary water types: Na-Cl and Ca-HCO₃.
- Na-CI: Marine aerosols, coastal rainfall recharge, and influence of Tygerberg Fm.
- Ca-HCO₃: Dissolution of calcium carbonate in Witzands Fm.

The area has a Mediterranean climate, with mild, wet winters (average MAP ~130–360 mm/a, mainly from May to August) and hot, dry summers. Winter rains provide most aquifer recharge, while summer coastal fog supports local ecosystems. However, high evaporation rates, often exceeding rainfall, increase surface water scarcity, making groundwater a critical resource.

Status Quo

6. Threats & Risks

CLIMATE CHANGE

The West Coast of South Africa has moderate to high temperatures, with hot summers (25–35 °C) and mild winters (15–20 °C). Coastal areas benefit from cool sea breezes, while inland regions experience more extreme temperatures. High summer heat increases evaporation, impacting water resources.

Urban and industrial activities are concentrated in Atlantis and Langebaan, while agriculture dominates in Elandsfontein and Adamboerskraal. Yzerfontein remains largely covered by natural vegetation due to minimal development and conservation efforts along the West Coast, Langebaan Lagoon, and Berg River Estuary.

ECOLOGY, BIODIVERSITY, AND CONSERVATION

- Major GW Dependent Ecosystems: Wetlands, Estuaries, Aquatic Systems
- Protected Areas: National Parks, Reserves, CBAs, and Subterranean Government Water Control Areas (SGWCA)

Much of the area, including the Berg River Estuary and Langebaan Lagoon, lies within the Cape West Coast Biosphere Reserve. The reserve includes the West Coast National Park and several private nature reserves. Langebaan Lagoon is also a designated Ramsar site.

STAKEHOLDER ENGAGEMENT

STAKEHOLDER ENGAGEMENT PLAN

Stakeholder engagement is aimed at ensuring that all the concerns related to the SWSA-gw identification and refinement process are thoroughly represented and effectively addressed.

STAKEHOLDER ENGAGEMENT PLAN

- 1. Identify Key Stakeholders
 - a) Stakeholder List (continually updated)
- 2. Define Stakeholder Motives
 - a) PSC-01 & PS-01 (understand initial concerns)
- 3. Setup Stakeholder Comments Register
 - a) Prioritization of comments (in consultation with DWS Project Managers)
- 4. Responses
 - a) Documentation of Responses (in consultation with DWS PM)
- 5. Communication Channels
 - a) PSC & PS meetings
 - b) Email Responses
 - c) Published Reports

STAKEHOLDER ENGAGEMENT

Objectives with PSC Members

- ✓ **Guidance & Oversight:** Align the project with strategic goals and policies.
- Stakeholder Representation: Address interests of stakeholders, including government and communities.
- Resource Assistance: Facilitate access to necessary resources and support.

Role of PSC Members

- ✓ Advisory Role: Offer expert advice and recommendations.
- ✓ Monitoring & Evaluation: Track progress, assess risks, and ensure objectives are met.
- ✓ Liaison Function: Bridge communication between the project team and stakeholders.

CAPICITY BUILDING

CAPACITY BUILDING

| Associated Task | Capacity Building Details | Date Scheduled | Type of Training |
|--------------------|---|---------------------------|---|
| T2.1.1 | Data and Information Assessment | 16th Jul 2024 | Type: Workshop (CPT) Face-to-Face Session: 1 Day |
| T3.1.1 | Status Quo SWSA- gw Assessment | 13 th Feb 2025 | Type: Workshop (CPT) Face-to-Face Session: 1 Day |
| T3.2.1 | Refined Methodology Assessment | May 2025 | Type: Workshop (CPT) Hybrid Session: 1 Day |
| T3.3.1 | Delineation of Refined SWSA-gw | Oct 2025 | Type: Workshop (CPT) Face to Face Session: 2 Days |
| T.3.3.4 | Updated Status Quo SWSA-gw | Jan 2026 | Type: Workshop (CPT) Face to Face Session: 2 Days |
| T3.4.1 | SWSA-gw Protection and Management | Jul 2026 | Type: Workshop (CPT) Hybrid Session: 1 Day |

Date: 13th February 2025

Participants:

7 DWS officials, 3 Umvoto team members

Objective:

 to assess the current status of the SWSA-gw using specialized software and tools such as Google Earth Engine, QGIS (utilized for visualization)

Key Activities:

 Produce report quality geospatial maps per SWSA-gw, including sourcing, editing, styling attributes

Tools & Technologies:

- Training on QGIS and Google Earth.
- Focus on Styling and Thematic Layers as well as Quality Control

Outcome:

• Support the Capacity Building objectives outlined in the Inception Report (Deliverable 1.1).
